You should get to work on a cryogenic system to preserve your body if
you are going to wait, it could be a while!

>that just kicked him off!

Of course, you aren't permitted to join the list either. For that, you would have to contribute something other than flames, and you have ably demonstrated that all you know how to do is electronically stalk, forge, mailbomb, abuse the rights of legitimate users and a variety of other sordid activities.

of all the bearcats whats your favorite?
of the icom/aor/alinco what's your fave?
i have been looking at the alinco&bc3000, thinking of ordering from
durham radio (http://www.durhamradio.ca/) or some other foreign shop so
i can get full coverage
only about $40U.S. difference at durham. it kinda surprised me that they
were close in price, i always thought that the bc was a good radio, but
not in the class of the icom\aor\alinco 's
any input is appreciated, thanks in advance

Stop by a local rental place, ask for a Post Driver, they are used to
install tempoary fencing metal post. It's a 24" long Pipe closed on
one end with Handels, Weight about 20lbs. You just Lift and Drop it
will drive that ground rod in the ground in a couple of minutes. We
use them all the time for driving ground rods a cellular sites.

Yeah but in order to get a Comtel don't you have to import one from the UK? Wouldn't one worry about it getting held at Customs?Scanner would be paid but you wouldn't have one the gov. would.Read the notice to U.S. residents on Javiation's website.That's what scared me off.I would rather use the money at a casino:)

> though, that I will verify.

Ka> Obviously you ARE NOT sure if this is mis-information or you
Ka> wouldn't be asking for the other data.

What other data? You have yet to produce ONE speck of data
to back up your lies.

I had breakfast with the new R10C Brenda Donovan, the former NC
of NET202, Saturday morning, and she said you're a liar.

Since Cheek announced his decision to leave 3 months in advance,
there is no way that your statement of a 30 day notice could
hold water.

He never committed a P4 violation that would warrant having
his links cut.

You are nothing but a bold-faced liar, a disgrace to the amateur
radio fraternity (which the ARRL is going to hear about), and the
scum of the face of the earth.

Ka> Try contacting REC for that area at that time if you want more.

And your total ignorance is showing. The REC has no say in
the matter of P4 violations and link cuts. That is up to the
RC's and NC's

Now, why don't you go crawl back into the ground from where
you came, scumbag?

The mil freq range you are looking for is 225.-400.mhz AM which the
current trunktrackers do not receive, You might also find coms in the
138.-144.mhz AM range, but I don't know if it get's that either..

>I enjoy listening to Police calls but, with Va.. Beach having the lowest
>crime rate in the US per Capita for 4 years running it can get kind of
>boring sometimes.....:)

>The Mil. Freqs. are what I am really after.

Another scanner is in order here! I use a PRO-2006, a PRO-60 and a
PRO-43 for uhf mil air, these are the only one's I know that receive
that range, I'm sure there are more. I would actually like to know of
others capable of this freq range..so if anyone knows post the info!
Another alternative is a cheap shortwave receiver, I just got one and
it's awesome, tons of mil coms to be had!

Hope you don't mind my emailing.

The only radio so far I have found that supports TrunkTracking "and" the freqs. you mention (225.-400) is the Uniden BC895XLT. Have spent most the morning looking into this and so far this is the only one. You can also find more info here. I had hoped to stay with the Handheld unit but have not been able to find one that does both.
I had considered the option of more than one scanner. But having just purchased the Pro-90 if the combined price of the other with the Mil. Air Freqs would push it much over the BC895 I may just return it and go with the base unit. I have checked to see if the local RS had any handhelds of this nature in stock and they do not. I used to have a Pro60 and could kick myself for letting it go now.

Anyways, being new to this if you could give your impressions on the BC895XLT from the site I listed above or on the RS Pro-2042 it would be appreciated. The 2042 does not have Trunktracking but it is available for $239. The 895XLT has Trunktracking and Mil. Freqs. and also an RS-232 port for the PC. but not able to find locally to check out.

TIA
Bryan

Jack,

Can the Opto computer interface cards like the OS535 do the same thing as the PROgramit board? I'm still trying to differentiate the capabilities of each.

Thanks!

This topic has been covered pretty well in the past few days. Wiggie posted a thorough response that I'm sure a dejanews search will turn up.

Bottom line is the Opto cotnrols the scanner; the Programit programs the scanner. They are completely two different animals.

Hi, Steve.....I have used an attic-mounted Diamond discone connected to my Pro-2006 by about 25 feet of RS Rg-8 cable for many years now. It seems to work great...I'll answer your questions below.....

On Sat, 01 Aug 1998 02:11:18 GMT, shirsh@bellsouth.net (Steve Hirsh) wrote:

>Any advice on the following would be appreciated:
>
>1.What kind of reception to be expected using an antenna in the attic?

The roof construction does not attenuate the signals very much at all. This is especially true if you have a wood shingle roof and no large areas of metal, such as aluminium siding, etc.

>
>2.Will this work well with a handheld scanner? (Yupiteru MVT-9000)

Sure...I hook up my BC-200 XLT to it sometimes and it works fine. A couple of things to keep in mind:

1. Handheld scanners seem to get overloaded by spurious signals(intermod, pager crap, etc.) more than desktop units. Triple-conversion rigs, like the old RS Pro-43, for example, do better with this configuration.

2. When I do use the 200-XLT on the attic antenna, I use a short jumper of Rg-58 cable to connect to the bnc on the radio. This is to lessen the chances that the thicker Rg-8 cable will torque and break the solder joint that connects the bnc to the radio's circuit board.
>
>3.Do I need to amplify the signal? (I will be using RG-6, approximately 30 ft.)

I wouldn't. Pre-amps usually cause more trouble than they are worth, especially in large metropolitan areas....overloads the radio's front end.

>
>4.Which antenna would you reccommend?

As I mentioned, I use the Diamond discone, but I probably would have opted for the less expensive (though not as well built) RS discone had it been available at the time. I have also heard many people have great success with the Scantenna or its new clone that is available at RS.

Hope that helps,

-Larry

Neither, actually, if your intent is gathering information and not being part of an organized rescue operation. The scanner becomes useful if you're planning to actually assist in rescue operations (more on that later.)

The best thing to have under these sorts of cicumstances is a plain old AM/FM radio with lots of spare batteries. Unless a disaster is remarkably total (in which case, perhaps this whole discussion would be moot ;) at least some local AM stations would remain on the air with backup generators and will be transmitting crucial information on location of shelters, safety of water supplies, etc.

That's not to say that a good shortwave portable with AM/FM wouldn't be even better, as you could get news coverage even in the event that local coverage is completely knocked out, but the odds that BBC will have specific information of use to you is relatively low.

The scanner would be even less useful. Most of what you would hear on the scanner is specific details of specific rescue operations. What you won't hear is information of general interest, because the scanner bands aren't set up for broadcast use, and not enough people have scanners to make it an effective way to disseminate information.

ON THE OTHER HAND, if you're interested in being trained and ready to assist in rescue efforts or shelter setup, etc., a scanner would be very useful. Even more useful is to get a ham licence (which no longer requires Morse code and can be gotten with only a few hours of study) and a compact two-way transceiver, and attend ARES meetings in your area. With a two-way radio, you can do more than listen to rescue operations -- you can participate in them as well, and radio

back status. To do that, obviously, you need training in procedures so that everyone doesn't just jump on the air and talk at once. ARES runs practice "nets" where you can learn the procedures needed to pass information back and forth and co-ordinate activities, and best of all, the training is totally free. So if you're thinking of being a trained "para-rescue" sort of person, then definitely you need more than a receiver.
Just ask a local amateur ("ham") radio club, and they should be able to point you to a nearby ARES group. AFAIK, they are found all throughout the USA, and similar organizations of hams exist all around the world.

Just my $0.02

>by cutting a grey color wire on the main board. Can anyone help?

Got all of the following 2006 mods from AOL's scanning forum library... You should take a look there some time.

From: rats@ihlpm.UUCP

PRO-2006 Modifications

NOTE: The Electronic Communications Privacy Act of 1986 makes it unlawful to monitor mobile telephones, including cellular. The following modification is intended only to restore continuous 760-1300 MHz coverage as originally provided by the design of the PRO-2006 microprocessor.

BE SURE TO TEST YOUR PRO-2006 FULLY BEFORE ATTEMPTING THIS MODIFICATION. ANY MODIFICATION MAY VOID YOUR WARRENTY.

824-851, 869-896 MHz Frequency Restoration

Tools Required: small Phillips screwdriver, small wire cutters.

Procedure: With the power cord unplugged, remove the two rear cabinet screws holding the upper cover. Lift off the upper cover, being careful not to stretch the speaker leads. Examine the inner, right-hand-corner of the front panel to find two glass diodes, labelled D503 (upper diode) and D502 (lower diode).

Using the clippers, very carefully snip the visible lead of the lower diode (D502) at its bend and slightly separate the cut ends. If it is ever necessary to send the radio back for warrenty repair, the diode leads should be carefully resoldered.

Reassemble, plug in AC cord, turn on scanner, and press RESET.

Keyboard Beep Delete

With the top cover removed as described above, locate connector CN3, a 15-pin connector with colored wires at the front of the main circuit board. There are two precedures which will stop the beep tone from being heard through the speaker; read both to decide which procedure you want to follow.

(1) Find the center grey wire coming from CN3 and cut it midway to
disable the beep tone. You may wish to solder a resistor in series
to reduce the beep volume, a trimpot to vary the volume of the beep
tone, or a minature switch to choose between beep and no beep.

(or)

(2) Using a pair of needle-nose pliers, CAREFULLY pry the plug from CN3,
revealing a row of pins. Locate the center pin (#8) which corresponds
to the grey wire and bend it down flat, disabling the beep circuit.
Reinsert the plug. The pin may be erected again later to restore the
beep tone if desired.

This completes the restoration procedure. Reattach the cover and replace
the screws.

WARRANTY REPAIR

Should it be necessary during the first year of ownership of your new
PRO-2006 to exercise your warrenty, it should be carefully double-boxed
(as you received it) and returned to Grove Enterprises. Be sure to
include a copy of the original bill to establish warranty
privileges.

You must prepay only shipping and insurance; return shipping and
insurance to you will be paid by the dealer.

Grove Enterprises, P.O. Box 98, 140 Dogbranch Road
Brasstown, NC; 1-704-837-9200

|> Any side-effect? A guy from Marymac told me the mod
|> increases scanning speed significantly.
|> nvn

There are two diodes behind the "3" key on the keypad.
Clipping one restores cellular, clipping the other
increases scan speed by about 13%. I did this to my
Pro-2006 after the warranty expired and did indeed measure
a 13% scan and search speed increase. I don't think
this has had any adverse effects on the radio although
its theoretically possible that the increased scan speed
might cause the radio to miss some carriers - but this
is purly speculation on my part.

Cheers,
Peter

>already scans *much* faster than the 2004/5 (Hyperscan) with a 12 MHz
>crystal, he cautions that it may or may not work. HAS ANYONE TRIED A
>CRYSTAL FASTER THAN 12 MHZ IN THE PRO-2006?

Yes, I have done the Crystal mod. I used a 16.630 MHz crystal from an old
cordless phone (no bull), and I got a big speed increase (approx. 46 channels
per second). I tried several different crystals, ranging from 16MHz to 39MHz,
and my results seem to indicate that the highest crystal freq. should be about
18 MHz. If the crystal is too fast, the 2006 just uses the 3rd harmonic (ie
a 39MHz crystal operates like a 13Mhz.)

From: ross@novax.llnl.gov

>>The Scanner Mod Handbook #2 says to replace the 12 MHz crystal with something
>>faster; however, the author, Bill Cheek, says he hasn't actually tried it. I
>>haven't either, although I'd be interested in knowing if it is a successful
>>mod.
>

Well gang, right after I got my Mod handbook 2, I tore into my 2006. At first
I
tried a 20 MHz xtal, the processor locked up and not all the LCD display
segments were happy (I had already done the diode clip speed mod). So I tried
an 18 MHz xtal, same problems. I contacted Cheek (the author) and he reported
that 16 MHz was the safe upper limit as he had seen no lockups at that speed
and higher speeds had produced lockups on SOME units.

So I changed xtals again. The 16 MHz runs fine without any loss of sensitivity
and I find enough delay left to still be able to use it (a faster
microprocessor xtal shortens delay time).

My favorite 2006 mod is a wired remote control (Monitoring Times Aug 91 - Bill
Cheek). I added a few extra parts and can control the following functions from
a six foot detachable cord: Scan, Manual, Search up, and Search down. Searching
is a snap when you can't reach the keyboard or it is dark.
~~~~~~

Gary

From: IN%"horak@eugene.convex.com" 7-NOV-1992 11:49:43.95
From: horak@eugene.convex.com (David Horak)
Subject: RE: PRO-2006 Scanning Speed Mod.

Well, I changed the crystal in my Pro34, which is the same type of crystal and harder to get to than the 2006; however, I haven't changed the 2006 crystal yet. Some of the following instructions come from the Scanner Mod Handbook Vol. 2 on removing the logic board. Please read it all before doing anything. If you royally screw up your scanner, IT IS NOT MY FAULT!!!!!

Before you start anything, make sure you are at a static safe workstation. Unplug the A/C power cord. Remove the top and bottom covers. Remove the 4 countersunk machine screws from thesides of the front panel, then gently pull the panel away from the main chassis. All wires and cables will have to be disconnected from the top and bottom of the logic board (the board that the crystal is on). This will cause your memory channels to be lost and you will have to reprogram them :-((If you can work around it, you could leave CN-3, a 15 wire connector, connected to save your memories). At this point you may have to desolder a ground wire from the chasses going to the bottom of the logic board metal shield. Next, remove 6 small screws that secure the logic board to the front panel. Then, face the inside of the front panel placed in an upright position and locate the white 13-pin connector (CN-501) at the upper left corner of the board. This connector doesn't have any wires, just metal pins going into it. Gently pry this connector apart with a small flat blade screwdriver and the board should slip away from the plastic front panel and come loose in your hand. Also, you may need to remove the volume and squelch knobs. Desolder the metal shield at six places around the logic board and lift it up and off the board. This is fairly easy to do with a low wattage soldering iron. Apply pressure with your fingers while the shield is heated at each leg. As the solder melts, that leg of the shield will slip upward and pop free. Now there are two choices. If you have an air sucking soldering iron, you can procede to desolder each of the three leads. If you have a normal iron, this will be impossible. The remaining choice is to crush the crystal with a pair of needle-nose pliars until only three leads remain sticking up off the board. Then you can heat and remove each of the three leads. The center lead is ground. You will only use the outer two leads when installing the new crystal. It would be a good idea to insulate the body of the crystal with shrink tubing (whatever you do, don't use electrical tape!) to avoid it shorting out to another component. The crystal will have to be bent over so that the metal shield can fit back on top of the logic board. Before you completely hook everything back together, get the scanner in a usable state and make sure it works. It would be a real bummer to tear it all apart because something is wrong.

Hope this helps,

David

alt.radio.scanner
Subject: Pro2005/6 SSB MOD HERE!
From: horak@convex.com (David Horak)
Date: Mon, 31 May 1993 18:04:59 GMT

I had a few requests for this mod so I thought everyone would benefit...

This is the mod for adding SSB capability to your Pro2005/2006. It is taken in part from Bill Cheek's Scanner Mod Handbook Volume 1. As long as you have a shortwave receiver with an external antenna jack and capability to tune to 455 KHz, you can interface it to the Pro2006 with this mod. It is best if you use a static safe work environment to perform this mod and you should have some technical knowledge. Also, a schematic would be helpful but is not necessary.

You will need the following parts:

Output jack (I use a 1/8 mini earphone jack but some like a BNC. The 1/8 mono jack is easier to install because you don't have to drill as big a hole in the back of the unit)

.01 uF capacitor

5 Kohm resistor (1/4 watt)

6 inches of mini coax or other shielded cable

A cable to run from the 2006 to your shortwave. I use the shielded cable that has the 1/8 plug on one end and a phono plug on the other end (1992 catalog Radio Shack P/N 42-2444 works for me). The phono plug is perfect for the antenna input of my DX440 shortwave receiver.

The first step is to remove the cover of the unit and drill a hole in the back of the 2006 for your 1/8 or BNC plug. (You will want to wrap some tape around the drill bit about an inch from the end to keep it from cruising right on into the electronics once it punches through the metal!) Solder the 5K resister to one end of the .01 uF cap. Solder the other end of the cap to the shielded coax wire. Solder the other end of the coax to your 1/8 phono plug (or BNC) and ground the cable at this end. Now that the cable is in place you are ready to connect it to the 455 KHz source which is D33. It is on the top circuit board near the middle left, not too far from a huge capacitor. Solder the end of the resistor to the cathode of D33. (This should be the top of the standup part) Now you can test it out before you put the cover back on to make sure you did everything correct. You should be able to tune to some local airport or CB frequency on your 2006 and receive the same thing on your shortwave (with it tuned to 455 KHz and hooked up to the 2006 of course). If you tune something on your scanner that is SSB, you should be able to switch your shortwave to SSB and tune in the signal just fine. Beware of one thing, since the 2005/6 only tunes in 5 KHz increments minimum, you may notice from time to time that the

signal on your shortwave isn't real clear. It may be that you will need to tune the shortwave anywhere from 451 to 459 KHz to tune in the signal well!

If you don't succeed or this description has you baffled you probably shouldn't be doing the mod in the first place. I assume no responsibility for screwups. Good luck

David

Hi; I don't know if this is a old topic but I found that in my area I
get a lot of what appear to be cordless phones in the 450-470mHz range;
does anyone know what these are? My only guess was I am receiving a half
wave of the 900mHz phones. If anyone knows please email... Thanks,
-Matt

For VHF-lo use the Radio Shack telescopic whip.

For best all-around try the Austin Condor - it's rather fat though.

Best compromise for all-around sensitivity and size: GRE all-band (Radio
Shack PRO-34 [THIRTY FOUR] replacement stock antenna).

I don't think Glen wrote that. He has NEVER been afraid to use his real ID when addressing Cheek about his problems, so I doubt he would now.

Besides, the point made by "Newbie" is correct regardless of the author! Once the mialing list got Bill moved off, the situation there improved greatly & their problems were solved. The same would be true for this NG.

Fact is fact, & the recent events only serve as "proof positive".

Except for half the people on this NG & the 700 on the scanning mail
list
that just kicked him off!

The only "quals" he has that are self evident is his lying & trouble
making.

> His is a lifetime
> body of work that speaks volumes of and about his qualifications.

Yea, he got kicked off Fido, he got kicked off the scanning mail list,
he doesn't have a FCC license, he is NOT a member of Mensa as he
claimed, he blew up a sat dish when it landed on high power
wires in Colorado. By GOD you're right, his "lifetime body of
work" DOES speak volumes of his qualifications & abilities and lack
thereof!

Yes so I created a loop-hole in the agreement for Bill so he could
defend himself but not start new flames. He still declined.

Obviously, Bill's constant refusal to stop flaming demonstrates
his true intentions.

I recently did a search for my name on the newsgroup (good to do this every once in a while) and was VERY surprised to find that one of the messages on this newsgroup was posted by "Ryan Faricy KC0DSZ" claiming that ".. Steve Halket and I are good friends, and I told him about this.." <SNIPPED THE REST>

This was in regard to a number of posts by this idiot kid, who picks newsgroups at random, then posts stupid SH*T to them... just to get a response.

BE ASSURED!!! At no time did I, or do I, call this IDIOT a friend, much less a good friend. In fact, after receiving NUMEROUS emails from this idiot advising that he was going to "tell my ISP". I emailed his father to let him know what a BRAT he has. His father apologized, said that Ryan was a little 'spoiled' and he would pay closer attention to what Ryan did on the computer.

Looks like he has now decided to use your newsgroup as his playground. Not only is a pathetic little pimple on the ass of society, he is a liar!!!

No skin off, but I AM DAMNED PISSED THAT HE USED MY NAME and CLAIMED me as his friend!@!!!! MUST TRULY BE LONELY!!!!

The proof is below mackey in one of your own post you that you wish to ignore.
You go find your buddy and fellow liar obfd , that way you both can have tell the same lie about the warrant.

Your a liar pure and simple and there is no way you can dance around that fact.

You can keep cutting and pasting all you want to change the content of the postings to suit your needs and lies.
But there is one thing you keep forgetting, the original posts are still available which proves you are a liar.

I was not aware the Pro-2042 was a Trunk Tracker. Am I correct that with
the added components you have listed it will have Trnk Tracking
capabilities.
I ask because my new Pro-90 does not have Mil. Air Freqs. and have been
considering picking up a Pro-2043 at my local RS.
By the way the price here is $249

Wow, I didn't realize the 895xlt covered 225-400! They are offered at
www.uniden.com refurbished, like new for $200. They also feature a
serial port to control it from a pc..damn good deal I guess!

>I had considered the option of more than one scanner. But having just

The BC895XLT is an awesome scanner! I'm sure that you will find
nothing but happy users of it on here! There are a lot of suppliers of
these radios on the web, don't have a url for you but a web search
should turn up dozens.

If you read the post it is right there in front of you , your reply to
Jack Anderson when he told you there wasn't any warrants out for Bill.

You just don't want others to know the truth , that there is no warrant
now out for Bill and there never was a warrant out for Bill.

mackey you made the whole story up about the warrant and got obfd to
back you up, but your scheme failed when proof did come out and showed
there was no warrant you chose to ignore it and continue the attacks.

Now your trying to shift all the blame to obfd who is not on here to
defend himself against your lies that he was the one who made it up.
Well you can go ahead and try that and no one on here is going to
believe your lies.

You have been caught in another lie and this time you cannot lie
yourself out of it or not take responsibility for it.

Dave don't hold your breath waiting for his proof , he is constantly saying he has proof about things and when asked to show it, he comes up with an excuse for why he cannot.

Like the one I am waiting for the San Diego Court to sned the proof about the warrant.
Then there is the one where someone is going to go in person and get the proof of the warrant.

All mackshit does is lie, lie , lie.

Source record: 150017

The only problem with using the BC895XLT for military air monitoring is that you can't manually select the receive mode. Many tactical and air-to-air comms are in the 138-144MHz range and 148-150MHz range in AM mode. The 895XLT automatically selects NFM mode in these ranges since they are technically Government Land Mobile bands.

Of course, if you have to have trunktracking too, then you're stuck.

No, the programit interface actually programs the channels in the
scanners memory, where the opto board takes over control of the
scanner and software in the pc controls what gets scanned,
The combination of both would be awesome in a 2042!

Scan from 108.-136.mhz AM and check with Delta to see if you can bring
the scanner on the aircraft.

83. Q: Handheld antenna for best use at work?

Newsgroup: rec.radio.scanner
Date: 1998-08-01 00:00:00 UTC
From: Bryan Costin <bcostin@clark.net>
Message-ID: <6pu444$gf5$1@clarknet.clark.net>
Source record: 150025

I have a Radio Shack Pro-90 that I use at my desk at work. I've just switched offices over at work, going from a windowless upstairs office to a slightly-below-ground-level downstairs office with one tiny little window at the wrong end of the room. I have been using an RS 20-006 whip antenna to get decent reception of the local Carroll County, MD trunked system. My new office is nice, but the reception is pretty bad in comparison with the old one.

So, which antenna would do the best job in this situation? If I have to choose, then my main priority is the 800MHz trunked system, but it would be nice to receive the 39MHz state police channels too, so general coverage would be a plus. Complicating matters is the fact that I'm a computer technician, so I can often expect to have open systems nearby gushing RF interference--though I don't guess that there's much an antenna can do about that. :-)

Some looking around has turned up nice comments on the Austin Condor and the Max Systems "High Gain 800 MHz Portable Antenna". It seems that the Max Systems antenna is intended mostly for 800MHz reception while the Condor offers wider coverage. There's also an antenna from Diamond that seems to be popular with some folks. Rich Wells review page has been a big help, but he doesn't cover the Max Systems product.
(http://www.strongsignals.net/htm/rev_hant.htm)

Any recommendations or advice? Would another antenna (like a cellular antenna) work as a useful alternative? I'd also appreciate any pointers on good places to purchase these items; the only place I've ordered scanner stuff from is Grove (and I was happy with them.)

BOTH PACKAGES HAVE BEEN SOLD!

Thanks to all who replied..

Dan

I have the following Yaesu FT-50 RD dual band HT packages for sale.
Both radios are MINT and less then six months old. Both radios come
with box, manual, and stock accessories...

Package # 1 :

1- FT-50 RD dual band HT
2- FNB 41 5 watt batteries with OPTIONAL spring belt clip
1- FNB-40 2 1/2 watt battery with OPTIONAL spring belt clip
1- MH 34 speaker mike
1- COMET SMA 501 "miracle baby" antenna
1-MAHA MH-101 drop in charger
1- EDC6 DC adaptor
1-SMA to BNC adaptor
1-ADMS 1D software and cable package

Retail NEW for above is app. $670.00

Selling package for $350.00 shipped to 48, COD is $5.00 extra.

Package # 2 :

1- FT - 50 RD dual band HT
1-FNB 40 2 1/2 watt battery with OPTIONAL sprinf belt clip
1-FNB41 5 watt battery with stock belt clip
1-EDC5B cigarette lighter power cable
1-CT30 mike adaptor
1-SMA to BNC adaptor
1- ADMS 1D software and cable package

Retail NEW for above is app. $500.00

Selling package for $250.00 shipped to 48, COD is $5.00 extra

NO TRADES, I will not "mix and match" packages, and I wish to sell the
packages intact.

E-Mail if interested

Dan

> you took the radar test you got a radar endorsement with it.

Correct, I never said they didn't! Infact, I have said that ORIGINALLY
it was the 1st & 2nd class radiotelephone license which were both
later converted to the General radiotelephone. (Just for Trivia, there
was also a 3rd class radiotelephone which is no longer issued
& was not converted to anything) Regardless, the 1st, 2nd, or later
General radiotelephone always had a license number attached to them.
This
license number is what Bill can not produce, of couse he says
he had the 1st Class General Radiotelephone license has never been
a type of license the FCC has issued to anyone. I have NEVER
met someone who had their commercial license that didn't know
the correct name of the license.

> In the late 80's early 90's the FCC changed the license to a General
> Raido Telephone license.

Yes, in the 80's the FCC converted the 1st & 2nd class to general
& dropped the 3rd class.

I have been waiting for you to slip and finally make the above statement
instead of your dancing around like you have been for months when asked
about the warrant and whether there was any proof of it.

You have known there was not any warrant out for Bill and that the
accusations you and obfd made were false.
You have known this since April 6th of 1998 and yet continued bringing
up the accusations.

See you have so many lies going you forget the post that you make .

As the post you made back to Jack Anderson below, and that is fact and
proof that what you are doing is nothing more then a personal vendetta,
you and the great obfd made up the story about the warrant to make
others turn against Bill from your accusations.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

PERCON PERCON POLICE SCAN
DESCRIPTION SIZE CET GROVE SPECTRUM REGION CALL WARE CSP

95. FS: Aor Ar-1000 XLT

Newsgroup: rec.radio.scanner
Date: 1998-08-01 00:00:00 UTC
From: Brian Rodriguez <booster@sonic.net>
Message-ID: <35C2C6A0.C505D966@sonic.net>
Source record: 150037
Cross-posted to: alt.radio.scanner,rec.radio.swap,rec.radio.scanner

For Sale : Here's the package:

-AOR AR-1000 XLT - 500khz-1300Mhz no gaps, (with ni-cads) / belt-clip
-the original AC adapter/charger
-the original Rubber-ducky style antenna
-the original "leather"/vinyl case that came with it
-the Designeq "hard" leather case
-the Designeq "Guide to the AR 1000"

The scanner has been used less than 10 hours (but been in the closet for 2+ years). Scanner window(plastic) has some fine scratches, but scanner body, case, and everything else is BRAND NEW. Ni-cads seem to be working nicely(like new).

$225.00 - I will ship (included) or deliver if you live in the San Francisco Bay Area.

..the only trade I would consider is for an AOR 8000.

Dear Radio Heads;

I'm looking for a 1000 channel computer controlled trunked scanner.
Does this product exist? I was looking at something like this:
Radio Shack Pro-2042 --$400
OS535 computer interface--$200
OptoTrakker --$300

Total --$900

That's kind of pricey if you ask me! I'm looking for something like
the Bearcat 90005XLT but with a computer interface and trunking
ability. Can anyone help me here?

I'm no expert, but it sounds to me like you're opening yourself up to
legal recriminations here. Sounds to me like you're "importing"
illegal radios into the US, which is a real no-no. Why give the
anti-scanner forces any more ammunition just to pick up a couple of
bucks?

The higher, and better quality your antenna, the better the signal. Use good quality coax and apply the connectors carefully to keep your losses down and you will be amazed. Some signals might be better with an amplifier but on a lot of signals they increase the noise. The indoor antenna should be a BIG boost.
Ray Hearn

Like anything you babble about.

> I have NEVER met someone who had their commercial license that didn't know
>the correct name of the license.

Back when there was a 1st Class Radiotelephone
License, most people referred to it as a "1st Phone".
That wasn't "the correct name of the license", but
the fact that people referred to it that way didn't mean
they didn't know what it was called, or that they
didn't actually have one because they didn't refer to
it by it's full proper name.
Most people who have a General Radiotelephone
Operator License refer to it as GROL. That's not "the
correct name of the licesne", but it doesn't mean
anyting other than that they are using a common reference.
Remember, spud, YOU'RE
the one who referred to the non-existent Amateur
license class of "code-less tech".
You friggin' idiot.

>DOES ANYBODY KNOW ANYTHING ABOUT THIS PARTICULAR MODEL. I WOULD APPRECIATE YOUR
>COMMENTS THANKS.CONTACT pdoddy@aol.com thanks.

The best thing about the SR-001 was driving around with it at night. The
muti-coloured LCD display provides one of the "best" lighting shows your
likley to see !

Performance wise I'm afraid it didn't really shine and I think it was
Shinwa's only attempt at a scanner. You really need the remote control
to use the set properly as without it some functions cannot be used,
switching from ANT-1 to ANT-2 was impossible without remote if I
remember. Overall operation via the remote or keypad wasn't that easy
and quite illogical at times.

There is a plate on the back and the original Shinwa promotional
material showed a DB-25 type serial socket on the back but I never saw
one actually on the SR-001. Internally there was one unconnected lead
that came from the CPU board but as to whether this could be used for
external control I have no idea.

It was also one of the best built sets around - a very nice diecast case
that also helped get rid of some of the heat that it generated - you
will need a PSU or at least 1 AMP - anything less and your PSU will
probably be pushed over the edge.

Memory backpup was a simple lithium type battery on the CPU board
(behind the front panel). If you loose the memorties each time you
disconnect it from 12v then you will need to swap the battery.

Hope thats of some help.

Cheers,

Thanks very much for this wonderful resource. I was very impressed with the ability to listen to the knucklehead in the middle as he wanders aimlessly around the paddock looking for a Kiwi to penalise.

Tell me, is their a way that I could make this a two way thing as I would love the opportunity to offer some friendly advise to the referee every know and then as it sometimes seems he has forgotten where to put his head?

By order,
Sir Just Me

What I don't understand is why you even bother with this loon! Why don't you (and everyone else) filter the guy out and stop wasting your time with him? He'll never stop with the mailbombing, forging, electronic stalking and all of his other misdeeds. His sole raison d'etre--the one thing that drives his entire miserable existence--is to engage in his personal vendetta. You're only helping pursue that goal.

I switched to the RS mag mount and performance is excellent. To avoid scatching the roof, I went to Lowes and got a thin layer of green adhesive felt and stuck it in the bottom of the magnet. It's thin enough to keep solid contact between the roof and the magnet - use it all the time at 70MPH plus.

I had to open up my 235xlt TWICE and resolder the antenna connection
at the PCB. I use a Comet Miracle Baby ant. for stealth, and a
full-length rigid (not the Radio Shack "hinged" model) cell phone ant.
with an SMA-to-BNC adaptor when I really need good reception (like in
a vehicle). I think the connection inside gets flexed slightly when I
use the longer antenna.

As far as cell phone reception, mine gets it from 817.000 to 823.9875
when I'm near a tower. This gets really annoying only when I'm trying
to monitor the city and county trunked repeater inputs in conventional
mode (the only way I can monitor two trunking systems at the same
time). I always do this when I'm fairly close to the portable units,
like at special events, etc.

Overheard on another newsgroup:

===

John Mackey found himself in dire trouble.
His business had gone bust and he was in
serious financial trouble. He had developed
renal kidney failure, cirrhosis of the liver;
testicular cancer; a venereal disease, and
a lower gastric disorder. He was so desperate
he decided to ask God for help. He prayed...

"God, please help me. I've lost my business
and if I don't get some money, I'm going to
lose my house as well. And I need a doctor.
Please let me win the lotto."

Lotto night comes and somebody else wins it.

Mackey again prays...

"God, please let me win the lotto! I've lost
my business, my house and I'm going to lose
my car as well. And I'm sick and dying without
medical care.".

Lotto night comes and Mackey still has no luck.

Once again, he prays...

"My God, why have you forsaken me?? I've lost
my business, my house, and my car. My husband
and dog are starving. I don't often ask
you for help and I have always been a good
servant to you. PLEASE just let me win the
lotto this one time so I can get my life
back in order."

Suddenly there is a blinding flash of light
as the heavens open and Mackey is confronted
by the voice of God Himself:
```

"Mackey, meet ME halfway on this.....
Buy a damn lottery ticket first.....
you friggin loon!"

118. Scanners for sale

I have the following Scanners/receivers for sale. They are in like new condition.
1- IC-PCP1000 Asking $350 which includes UPS ground shipping .
Original boxes software,etc

2- Icom R100 (real good shape). This unit is not blocked. It has had one tiny mod to bring out the discriminator point for 9600 wefax (case not cut,can remove in 2 minutes if asked) . I have used this unit to receive from 1.6 gig sat. $500.00 which includes UPS ground shipping. Original boxes,etc

I also have the complete WX sat receiving system including decoder PCMCIA card, 3 foot dish and LNA,etc ground mount. However cannot ship. If you are within 150 miles of charlotte, nc, I can deliver. This is priced at $400. If purchased with R100, total package is $800.

Hmmm, sometimes you just don't know.

I just got a unit from the Uniden website and it doesn't have the ATT on
it so it must be an older version.

Do you find the ATT function of any value where you are and how it was
implemented?

I agree about the statement of giving more fuel to
the anti-scanner people. Also, in the suppposed
"Land fo the Free", why in the hell are certain radios
illegal ? These kind of laws are like Nazi Germany and
the old USSR and shouldn't be on the US Law books.

This crap by people like Macky in Congress and Thomas
Wheeler in the CTIA is stupid and deserves to be
stopped. Remember, it was Wheeler that said that
scanners should be banned since they have no purpose
in society.

Just my few dollars worth.

125. Pro-90 and Air/Mil. Freqs. in Norfolk/Va, Beach area

Newsgroup: rec.radio.scanner
Date: 1998-08-01 00:00:00 UTC
From: "Bryan G." <bgridley@pinn.net>
Message-ID: <6pvd86$qoc@netaxs.com>
Source record: 150067
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Just purchased a Pro-90 and am beginning to question if it has all the freqs. I need. It is of course a TrunkTracker which I needed as all the local Services are on a Trunked System. However, being surrounded by military bases I was hoping to also be able to monitor some of these frequencies. (Mainly the USN Aircraft bands and any freqs that may be used on the USN ships that move in and out of port all the time. Does anyone know what freq. range these would be in. I have found a couple Web pages and many of the Military Freqs. listed are not useable on this unit. Also will this unit receive regular air bands for commercial airlines? The manual lists 960.000 - 1000.000 as Auronautical but these are outside the range of the scanner.

I enjoy listening to Police calls but, with Va.. Beach having the lowest crime rate in the US per Capita for 4 years running it can get kind of boring sometimes.....:)
The Mil. Freqs. are what I am really after.

TIA
Bryan

Message-ID: <97Hw1.186$D95.8378166@alpha.sky.net>
Source record: 150068

Presumably this feature is for areas with heavy pager intermod., etc. In my case, the only times I regularly experience this is when I am within a couple of blocks of my office. During that short time, if I turn on the attenuator it doesn't reduce the sensitivity enough to eliminate the intermod. So to answer your question, no - I've yet to be in a situation in which I felt fortunate to have the feature. At the same time, you have to be careful not to turn it on inadvertently, as I apparently did for 4 months.

While I suppose I feel good about having the most recent incarnation of the unit, I'd be perfectly happy without the attenuator, knowing what I know and in my situation. Others might have a different opinion, of course.

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

Source record: 150108

I just got a BC235XLT Trunk Tracker. I already had a BC895XLT and everything seems to be similar to the 895, except that the 235 has the "." button labeled "ATT". When scanning or trunk tracking if I hit the "." button the "." in the display flashes on and off. I have no clue as to what this is for. It is not in the documentation anywhere. Can someone advise what it is and how to use it?

Thanks.

I think you are referring to:

Cat# 17-317 Adjustable Angle Antenna for use with portable cellular telephones

Cat# 278-144A RF Adapter adapts TNC-type male to fint BNC-type female

I have used this with a PRO-2041, and it has helped the 800 reception, at the expense of other bands.

Any advice on the following would be appreciated:

1.What kind of reception to be expected using an antenna in the attic?

2.Will this work well with a handheld scanner? (Yupiteru MVT-9000)

3.Do I need to amplify the signal? (I will be using RG-6, approximately 30 ft.)

4.Which antenna would you reccommend?

I know these are very broad questions, but your expertise or any input
would help.

thanks,

Steve

Kendrick-

You weren't being discussed to or about, so WHY do you feel the
need to post your resume now?

This had NOTHING to do with you at all, yet you need to be the
center of attention again & attempt to brag about your
credentials which are good, but certainly not anything that
most people working in the field don't have. You credentials
are pretty much "run of the mill".

You might do a DejaNews search on "BC235 Attenuator". Bottom line: Uniden made a design change (without any accompanying documentation, BTW) to include an attenuator. When the decimal is flashing during scan, search, or trunk modes, the attenuator is "ON" and has the effect of reducing signal strength somewhere between 10 and 20% (estimate).

I had my 235 for nearly 4 months before a post on this NG brought this to my attention. I was ready to send the unit back to Uniden because of "poor reception", and found out the danged attenuator had been on the whole time.

Warrants are public information. That's part of the purpose of warrants loony boy. To make that information public; to make the public aware that an individual is wanted by authorities.

There is no such warrant as you and OBFD describe. You know it. You can't search for what doesn't exist.

If there was such a warrant, why does Bill have such a prominent presence on the 'net? A cop could find Bill with a "YAHOO" search for christ-sakes. You know that.

You're just a slandering liar.

For an improved ground, dissolve a pound of copper sulfate in about three gallons of water and pour in the hole before driving in the ground rod.

There are standard ground rod driving tips to fit the standard 5/8 inch diameter ground rod made for almost all rotary hammers on the market. It makes driving them a snap.

That is great; but, be aware that Delta is something of an exception where this issue is concerned. Many airlines o not follow Delta's "lead". On TWA, for instance, the Flight Attendant's announcement specifically excludes the use of any AM or FM radio receiver (along with cell phones, etc.) even after the aircraft has reached cruising altitude.

Are you sure they aren't cellular, then? You could be picking up an image
from a 900 MHz cordless phone.

Cellular calls will have a high-pitched tone in the background (called SAT,
supervisory audio tone, I believe), around 6000 Hz.

Not many other types of normal autopatches or cordless phones will have this
"SAT".

Hi Blake-

I see you're on here lying & trying to cause problems, again.

And you wonder why I don't trust you! You will lie or do anything
you have to in order to make yourself look better & other who you
fear look bad. Your actions in regard to me are a perfect example of
this.

Anyway, in regards to your pathetic accusation that my "VEC credentials
are under investivation" by the "FCC/ARRL", let me say the following.

1. I have never been a VEC.
2. I have never been investigated or accused of any improper actions
or illegal activities as a licensed radio operator.

If you have proof then you should have no problem presenting
it. If a search warrant was authorized then present my address
& my date of birth, which would both be on the warrant!

You won't be able to because you are lying.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Mobile Telephone [22.501]

VHF - 30 kHz spacing UHF - 25 kHz spacing

Base: 152.030 - 152.210 RCC 454.025 - 454.350 RCC
152.510 - 152.810 telco 454.375 - 454.650 telco
Mobile: 157.770 - 158.070 telco 459.025 - 459.350 RCC
158.490 - 158.670 RCC 459.375 - 459.650 telco

Transmissions are FM. Many of these channels may now be used
for paging, specifically 152.78, which is a nationwide page.

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850
10 454.875 459.875
2 454.900 459.900
11 454.925 459.925
1 454.950 459.950
12 454.975 459.975

Transmissions are FM. Ground stations repeat the airborne
half of the conversation, and transmit a continuous tone when
idle. From one to four channels are assigned in a particular
area.
Service is used on private aircraft.

I have only been looking in this ng for about three weeks. I found some really neat stuff here re: scanners and scanning. However, it seemed that there was about 35 - 40 percent of the posts being made by two individuals and their gallery of followers. (I refer to the flame war.) I looked over the selection today, and picked 13 folks who were posting the majority of the flames/comments about flammers and they are now being filtered and deleted. If they were as diligent in posting questions and answers pertaining to the ng topics, it probably would have been a pleasure to have read their comments. Alas, they be gone now.

Yes, that's right. I always wait awhile until I see a "7" at the end of the price (I learned this trick a long time ago when I asked why they came up with a price of xxx.x7), and that signals they won't be carrying the product much longer. That's when I wait even awhile longer and see how much the price goes down - then I move in to buy it.

I did the same with my PRO-64, although I didn't wait long enough. Bought it for $149.97, and 2 months later, it was $99.97.

>E-Mial me at p008647b@pb.seflin.org Thanks Speedy

I own two BC9000XLTs, each equipped with the CTCSS option board,
and think highly of them. They can be modified.

From my FAQ article SCANNER RADIO REVIEW BRIEFS:

BC9000XLT (Uniden): 1995 vintage. High quality base using
up-conversion. 500 channels in twenty banks. Up to 250
channels can be programmed with alpha labels. Tuning knob.
Selectable AM, NFM, WFM modes. Optional CTCSS decoder.
Very fast scan and search. Can lock out 50 channels during
search. Delay and attenuator independently programmable for
each channel. Effective Auto Store feature stores unique
frequencies. Good RF section, but not as robust as PRO-
2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One
urban user, located within a couple of blocks of several
high power transmitters, reports severe desense problems.
For a full review, see "The Uniden Bearcat BC9000XLT," by
Bob Parnass, AJ9S, in Monitoring Times, March 1995. For
tips and modification information, see my column in June
1996 Monitoring Times. See US patents 4,947,456, granted
8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted
5/18/93 for further insights into fast scanning and
searching implementation.

>because he is innocent until proven guilty.

This is an admirable position to take. Until Mackey is actually prosecuted and convicted of selling licenses and the other illegal activities the original poster alleged, the best thing would be to give Mackey the benefit of the doubt. Of course, it would help if he would post some evidence of his innocence!

I was referring to your lies about having a degree. Your FCC licenses are
public record as are mine. You're just annoyed that I have more certifications, experience, and expertise than you. But then, so does everybody else.

> > If you can't stand a dose of the truth, get out of the newsgroup.
>
> Excellent advice you give.

Yes, it is. You should heed it.

> When ever people hold Bill accountable for his actions, you're in
> there trying to justify & minimize his actions.

I wasn't talking about Bill Cheek, you moron. I was talking about your lies about having a degree. Again, I accuse you of lying about having a degree. The ONLY way you can prove me wrong, is to confirm you really have those degrees by providing the necessary evidence. But, you can't do that because it (the proof) doesn't exist.

Thanks for the replies. There does seem to be some confusion about the legalities of scanning while in flight.

What started me on this was doing exactly what JTWard did, check the inflight magazine for approved electronic devices during cruise altitudes. VHF Scanners was listed as an approved device (along with laptop computers, gameboys, etc.).

anyway, thanks -- and thankyou JTWARD

cheers

rick

Something like that : it is illegal to purchase a scanner (from anywhere, domestic or imported) that can pick up cellular.

Getting caught is not too hard (since the "ship to" address is on the package).

I apologize Steve (for saying you were a friend), however you DID say "no
hard feelings". I consider that an act of 'truce' -- an "alliance" of sorts.

Since this was so long ago, I don't have the email and I don't know how much
you can trust me, but you did say this.

Again, I apologize for the confusion.

I love and use Wintone 2.0 for my local-area amateur radio repeater system
for the repeater functions.

It is well worth the money, although I have heard that he (the author of
Wintone) sometimes accepts the money and doesn't send the code for a long
time (sometimes 6 months).

Here's one.....

I have a Bearcat BC-150 scanner, originally manufactured by Electra Company. This scanner may have been built in the early 1980's, but that's a rough guess.

I am in search of repair documents as well as a parts supply source.

I appreciate any and all info....

236. Re: Grounding Rod Advice Needed....

Newsgroup: rec.radio.scanner
Date: 1998-08-02 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <35C4AF9D.DCE43C10@datacomm.com>
Source record: 149843
Cross-posted to: alt.engineering.electrical,rec.radio.scanner,rec.radio.amateur.antenna,misc.consumers.house

The post driver is one of the best / cheapest methods but......

If you have access to a large capicity rotohammer, the head, minus a bit will fit right over a ground rod. It works ok for one or two, if your are going to use it for very many get a bit designed for ground rods, it will keep you from damageing the tool. Using the rotohammer is like pushing the rod into butter, unless you hit a large rock, then it argues for a while.

If you don't have access to a rotohammer, or power, the post driver works well and is easy to make. I have a special one I made for use in difficult soils that weighs about fifty pounds.

Regardless of what method you use to drive the rod, dig one shovel of soil out, place the rod in the center of the hole, and keep it full of water while you drive the rod. In some soils with little rock you can push the rod in by hand with a steady up and down motion.

If this ground rod is for an electrical service ground, many electrical inspection authorities will require you to drive two and sometimes more rods six feet or more apart because of the difficulty of obtaining a low resistance contact between the soil and ground rod array.

If this is for an electrical ground, EMAIL back and I'll give you some suggestions that might work better for you.

Louis

237. Re: Aircraft Scanning

Newsgroup: rec.radio.scanner
Date: 1998-08-02 00:00:00 UTC
From: Ryan Faricy KC0DSZ <jtonsa@nospam.att.net>
Message-ID: <ODAQBQkv9GA.207@upnetnews03>
Source record: 149844

Incorrect in two ways:

1- [Passenger Jet] Aircraft do not always operate under IFR.
2- Scanners and other radio receivers are allowed on about 75% of all airlines, as long as they are not used at the gate, during taxi, take-off, climb, approach, and landing.
3- Permission is not required as long as the company's regulations require permission or prohibit the use of radio receivers on board at any time.

I've done my research on both of these points. Pick up an inflight magazine on any airline, and "Item #2" will plainly be proven.

Many newer police communications systems have an autopatch that sometimes switches channels every now and then. It is very much like an amateur radio patch -- uses only a radio and the repeater -- to make telephone calls.

I am not sure why the other side is faint, though.

SheMale Central? I don't know who this is, but I am not sure that I would
believe anyone called SheMale. The scanner is currently advertised for
$199.99. I'll tell you a secret. If the price ends in a 7, like $199.97,
then it is either discontinued or about to be discontinued. I think some
people believe that it is discontinued because the leather case for it is
showing up as discontinued. Although it is true that the case is
discontinued on the RadioShack store's computer system, it has only being
moved to the RadioShack Unlimited ordering system and will still be
available for years to come. This is probably why the price has not been
dropped on that item and probably will not be.

You can't "ban" someone from an unmoderated news group.
Your best bet is to kill file him or skip over his posts,
then you will have, for all practical purposes, "banned"
him.

>for $95.
>Anyone care to comment on which would be the better deal for the dollar.
>
>Bryan

For my money I couldn't decide so I bought both (well actually just a PRO-2035, but it's the exact same radio as the 2042 with a different color display & the "self programming" feature is a bit buggy). They have stromg and weak points and features that compliment each other. I use the 2045 by the bed and the 2035/2042 at the "main" daytime position next to the computer. The 2045 is more sensitive (easier to overload too) & has a wall-wart power supply so I use it with an attic antenna during thunder storms, when I must unplug the 2035/2042 with it's internal transformer and need for the outside antenna.
The 2035/2042 is better shielded and picks up less noise from the computer so it works better for decoding Pocsag and such. The 2035/2042 is easier to mod - you can find things on the circuit board for discriminator taps & such. The 2045 earphone jack is made for high efficiency headphones/earplugs & won't drive a speaker (perfect fro bedside use) - the 2035/2042 has lots of audio and drives a mobile style speaker loud enough to cover the whole house.
This list might give you some help deciding which you want, but unless you need trunk-tracking, the two together give me everything I need.
Neutrodyne

258. Pro-70; Mod question

Newsgroup: rec.radio.scanner
Date: 1998-08-02 00:00:00 UTC
From: "Matthew H. Fogle" <foglem@cec2.aps.edu>
Message-ID: <35C4C46C.DAC62C18@cec2.aps.edu>
Source record: 149865

I started out with the PRO-43, sold it for almost nothing (I didn't know what it was worth) and now have a PRO-70 (the current handheld cheap scanner). Tapping the discriminator is easy as they even give you a pin connecting to it! However I am wondering if anyone can explain the logic of the thing. I am curious in how hard it would be to mod it for more freq range since it uses the same chip as the 2022 does. Could someone with knowledge of this help out?

>wired directly to the 2.5mm stereo plug?

For what it's worth.

I downloaded the shareware version a while back, and stopped short of
using it because I had no cable.

I was looking through the doc file and they suggested that the cable used
with the ADMS-1 software for the Yaseu handheld ham xcvers would work with
a 3.5 to 2.5mm adaptor. I have a VX-1 with said cable, and am pretty sure
there is no optoisolator in the plug. So just for fun I went for broke and
attached a Radio Shack plug adaptor to the end. To my surprise and delight
it recognized the radio and downloaded its entire RAM without a hitch.

My check for program registration is in the mail this week.....

POP! (That is the sound of a can of worms opening...)

My advice is do not do it without the permission of the airline and the pilot. Radio receivers and transmitters that are not a permanent part of the aircraft's equipment may not be used while an aircraft is flying under Instrument Flight Rules (IFR), which for a commercial aircraft is ALWAYS. The only exception is with the permission of the owner and pilot of the aircraft.

Two likely possibilities:

1. - IMTS mobile telephones (pre-cellular car phones) operate on 454Mhz paired with 459Mhz. These systems are still in use in some areas.

2. - Commercial "Autopatches" operate on many systems.

Here we go again. Half-truths. This topic seems to generate more bullshit
than any other in radio.
It is true that most if not all commercial airlines have restrictions on
the operation of scanners and other electronic equipment on board their
aircraft. However, most airlines will allow scanner use during the cruise
portion of the flight, but not during takeoff and landing. To get the real
answer check the back pages of the in-flight magazine published by the airline
and in the seat pocket at almost every seat. Most airlines spell out their
policy in the passenger information section of the magazine. This is the same
section where they usually publish a route map, a list of cocktails available,
etc.
If a flight attendent spots the radio and tells you to turn in off, do so!
But then politely point out the appropriate passage in the magazine. Usually
that will be enough to restore your monitoring. If the flight attendent still
refuses then ask her/him to take the magazine to the captain for a ruling. I
had to do that once, and the flight attendent came back a few minutes later and
apologized and told me I could continue using the radio. The captain even
passed along their current freq. with ARTCC.

JW

Radio Heads;

Should I invest and buy an AOR AR5000 or ICOM IC-R8500 right now or should I wait to see if these companies are going to make trunking versions of these? And while I'm on the topic which of these scanners is better? So far I'm leaning towards the AR5000?

Mark

bozo mackey 150% of the accusations on here are from you, and I don't make accusations , I state facts and have shown proof of the posts you made and all you do is lie and say you didn't make the post .

The more you post your crap on here only shows the newsgroup your a liar pure and simple, like the bit you were using , lets please stop the flaming , but you kept up your crap by twisting others post to suit your need at the time.

Of course your going to lie and say you never did that , just ask some of the others on here and you will find out the truth, oh I forgot you don't know what the truth is anymore because you have gotten so use to lying you can't tell the difference.

No, I thought that would be pretty obvious by now. Any way, you can find out all of the details merely by pointing your browser to www.optoelectronics.com and http://www.qsl.net/ka2pyj/index.html.

Also, this topic comes up quite regularly. You can get additional background by searching www.dejanews.com.

When all else fails, you should ask John Mackey.

Howdy--
I saw it too. It's been running sporadically on the E! channel. Others have reported seeing it on there before. There's nothing but an 800 number. It looks like one of the scanners I can get at WalMart, a Bearcat something or other, it's safety-yellow case and style give it away. I imagine it will recv cordless phones (most will) but is cell-blocked (most are), so it would be a 'truth in advertising' scam. But they may have latched on to a whole truck-load of pre-1994 vintage models and are clearing them out. That, as I understand it, would be legal.

Does anyone else have any information on the FCC/ARRL investigation into John Mackeys VEC shenanigans?

Licenses for sale, as well as upgrades?

The information is that the FCC has been in Portland, preparing to revoke licenses, and has already had the US Marshals serve a search warrant on John's parents house.

Now, of course, no one should judge John on this, until it is completely verified, and he is proven guilty.

310. FreeTracker 2.3 was released (Computer program for BC895)

Newsgroup: rec.radio.scanner
Date: 1998-08-02 00:00:00 UTC
From: no.spam@for.me
Message-ID: <C59B3F7E37CB012D.49925E57B4B8A463.CA2D01234B0CE901@library-proxy.airnews.net>
Source record: 149917
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Version 2.3 of FreeTracker was released with lots of new features.
Homepage: http://www.AutoWinNet.com/freetrack.html

FreeTracker is a Windows95/NT program for interfacing with your Uniden
BC895 TrunkTracking scanner.

*** What's new in Version 2.3 ***

- Source code is included! That's right - FREE source code.
- Added Custom Query functionality
- Added QRZ hamradio callsign lookup
- Added "Import from Text File"
- Added chart and database editing buttons
- Added "Set all Hits to zero" database function
- "Invalid Pointer Operation" error - mostly fixed
- Search ranges were not saved if you didn't choose Exit to terminate
the program - fixed
- Chart dialog was not refreshed until program closed, then re-opened:
fixed
- Up/Down buttons were not automatically moved to the right edge of
program when window was resized - fixed

Description:

- Supports up to 25,000 "Virtual Channels" which are like the radio's
normal channels, but add Callsign, Description, Color (for activity
log), Alarm, location, hit count, and more. VChannels can be scanned
for activity, or stored into your BC895

- Descriptions - You can store Descriptions, Callsigns, and Locations
for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup
appears, a description is shown, along with Callsign, City/State, etc.

- Alarms - You can assign a Wav file, graphic, .RTF file, speaker
beep, or run a script while that freq/group is active. For example,
have all local police codes shown during police calls. I just added
some Cool bitmaps that appear with local police and fire stations

- Colorful charts and graphs show you what frequencies/talkgroups are
most active

- Powerful script language lets you create your own custom scripts,
and run when a certain event happens on your scanner.

- PerCon database lookups from their web page (stored as html) can be
imported. Also imports from Grove, Probe, and PerCon Dbf files!

- Drag and Drop channel editing - throw any database entry to a channel, or vice versa. If that frequency is already assigned, it zooms to the channel # to avoid a duplication

- Activity Report is color coded - you can assign any color to any specific freq/talkgroup

- Search Ranges - you can store up to 2,000 search ranges, then double-click them to activate an immediate search of that frequency range

- Lookup ham radio callsigns on QRZ cdrom

- Run custom queries against any FreeTracker database

- All BC895 keys are supported, allowing a virtual radio on your desktop

- FreeTracker can be minimized as a TrayIcon

- Database-editing in a simple grid. Click the record you want, and change any value

- Communicate with your radio interactively - type any command in, and see the response.

- Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

- Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

- Complete logging to a file, or printing just about anything.

- Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

- Multiple copies can be run for multiple BC895 scanners

Charles-
No the OS535 cannot program the scanner. The scanner's CPU and memory chips reside on the CPU/Logic PCB. Their interlink between them is on the pcb. Therefore to program the channels into the scanner, you either have to go through the CPU or be able to tap between the CPU and the memory chips.
The OS535 goes between the CPU/Logic PCB and the RF/Linear PCB. Its placement only deals with data connections between the CPU and the RF/Linear board such as the codes to control the PLL, switching of the BPFs, squelch detect, keypad beep, mute control, zeromatic, sound squelch, scan stop, and various 5V and 8V supplies for the ICs.
If you wanted to tap the traces between the CPU and memory chips...you could, but I count 24 pins on the CPU allocated for memory I/Os. With this model, and similar models, that is when it is best to go with a PROgramit interface. It has 12 connections on the Pro-2035/2042 models to the keyboard PCB. This way the data is entered into the memory chips via the CPU.
I hope this helps more than it confuses.

I did not know scanners were allowed on aircraft, but that is another subject.

In addition to the regular frequencies, if you have some extra channels try: 459.700, 459.725, 459.750, 459.775, 459.800, 459.825, 459.850, 459.875, 459.900, 459.925, 459.950, 459.975. On these frequencies I can pick up aircraft conversations from Chicago to New York from my house in Cleveland.

See http://www.javiation.co.uk/com205.html

Basically, they are the same but one is the
European model. The Com205 does have the
240VAC transformer (needs to be swapped out
for use in the USA) unless you use the 12VDC
connector. The avantage is Frequency coverage
is continuous from 25-520MHz and 760-1300MHz
(includes cell freqs).

$330 (US currency) for a new radio with
full coverage is a good deal. I've been
considering it myself. Of course I wouldn't
listen to any unauthorized frequencies! ;-)

> now out for Bill and there never was a warrant out for Bill.

No, infact I am pursuing the truth. If you have confirmed there is
no warrant for Bill them provide us with how you found that out so we
may verify. THAT would provide the truth. If someone states there
IS A WARRANT or IS NOT A WARRANT then they chould be able to provide
proof that others may verify. Without such, we can not rely on either
statement.

You're right, Wiggie. The lion's share of Radio Shack scanners
were manufactured by GRE. Uniden is a relative newcomer
to the Radio Shack line.

In article <35c26ee8.2663848@enews.newsguy.com>,
Wiggie <wjm2207@kcinter.net> wrote:
...

>UNKNOWN MAKES (16) : Pro-10, 20, 22, 26*, 27**, 33, 56, 70***, 72***,

Most of these were made by GRE.

>*The earlier Pro-26 model was a 4 crystal scanner, not the 200 ch.
>that has been produced in the last couple of years...

The PRO-24 and original PRO-26 were made by GRE.
BTW, I posted this oldie almost 15 years ago:

Improving the Radio Shack PRO-24 Pocket Scanner

Copyright 1984, Bob Parnass, AJ9S

Abstract

This article briefly summarizes my experiences with the new
Radio Shack PRO-24 pocket scanner, priced at $99.95. Prob-
lems encountered include:

o irregularity in plastic belt clip

o misalignment of UHF stages as received from dealer

o design deficiency in squelch circuit

o incompatibility of recommended AC adapter accessory

Cures for these ills, as well as a modification to increase
the scanning rate are covered.

PRO-24 Improvements

Powered by 4 AA penlight cells, this is a 4 channel, crystal
controlled receiver which covers the following bands:

o 30 - 50 mHz. (VHF Low)

o 144 - 174 mHz. (VHF High)

o 450 - 512 mHz. (UHF)

Included with the scanner are tri-band helical and telescoping antennas, a plastic belt clip, and an owner's manual (with schematic).

The outward appearance of this Japanese made scanner is identical to previous Radio Shack models (PRO-20A and PRO-21A) which covered only two bands. The circuitry is similar to other Radio Shack and Montgomery Wards models in that the same multi function MC3357P (2nd local osc., mixer, if amp, detector, and squelch) and T3375 selector chips are used. The audio amplification in the PRO-24 is performed by an LM386 chip, whereas pocket scanners in the past have implemented this function through the use of discrete transistor circuitry.

The PRO-24 uses a plastic belt clip, whereas previous scanners of the same ilk have used metal. The 2 holes in both types of clips are the same size and line up, so if the plastic clip breaks, it may be possible to order the metal one for an older model from your local Radio Shack store. The plastic belt clip and two screws are furnished in a plastic bag. If the owner wants to install the belt clip, she may find that one of the holes is a bit too small. Do not force the screw in, the brittle plastic may crack! Instead, enlarge the hole slightly.

I installed 1 UHF and 3 VHF High crystals. I had no way to accurately measure the sensitivity or selectivity due the unavailability of calibrated signal generating equipment. The sensitivity on VHF High seemed fairly respectable, considering the tri-band helical antenna. Sensitivity on VHF Low could not be determined due to a lack of a suitable crystal in my collection.

UHF sensitivity was dismal. In particular, the local police repeater on 470.3125 mHz, could not be received in many parts of town. I realigned the RF amplifier and mixer stages in the UHF circuitry, which improved UHF sensitivity noticeably. However, the UHF sensitivity still seems a disappointment. In the PRO-24, the front end stages for the 3 bands are all connected together at the antenna. As an experiment, I disconnected the VHF Low front end from the antenna, thinking that the direct coupling of this stage was loading the others down. I again realigned the UHF stages, but could detect no improvement in sensitivity.

The squelch control had an inordinately high amount of hysteresis, resembling "play" in a car steering wheel. This forced me to keep the squelch up at a point which prevented reception of signals of weak to moderate strength. As mentioned previously, the squelch function is performed by a

common Motorola chip, which has been used successfully in several previous scanners. An inspection of the schematic diagram, provided in the owner's manual, revealed that for some reason, a low value of resistance (33,000 ohms) was used for R35, which was placed between the squelch output and the noise amplifier input (IC1, pins 14 and 12). This "feedback" resistor was much smaller than the 220,000 ohm resistors used in previous designs. After changing the resistor in my PRO-24 to 220,000 ohms, the amount of hysteresis decreased markedly, and the squelch worked great.

Both the owner's manual and Radio Shack catalog recommend the model 20-189 AC power adapter/charger accessory ($6.95) for use with the PRO-24. This adapter may be used in two ways:

o If plugged into the AC adapter jack on the scanner, the scanner's batteries are disconnected, and the radio is powered from the AC line.

o If plugged into the charger jack on the scanner, the radio circuitry is completely disconnected, and the batteries are charged by the adapter through a current limiting 27 ohm resistor located inside the scanner.

These two jacks are of the coaxial type, and each contains a switch mechanism which is activated upon insertion of the proper size plug.

I bought the recommended accessory, and although it was labeled 20-189A, I was assured that it was indeed the proper adapter, and the 'A' meant that a new vendor was supplying these to Radio Shack. As a precautionary measure, I made a quick check with my Fluke DMM. This revealed a problem: when the adapter was plugged into the scanner, the internal batteries were still connected!

This can cause two unwanted effects:

o If I used the adapter to power the scanner, the batteries would be charging at an indeterminate rate.

o If I used the adapter plugged into the charging socket, the batteries would be placed directly across the 6 volt DC power supply (bypassing the current limiting resistor!) and would indeed enjoy a short life.

The culprit was the connector on the end of the adapter. The outer diameter was just a bit to small to actuate the switches in the scanner's jacks.

My problem was solved by buying the Radio Shack 6VDC 150 ma. AC adapter (273-1454, $5.95). In addition to having the

proper connector, this adapter works well, is cheaper than the recommended one, and can furnish almost twice the current!

The specifications in the owner's manual state that the scanning speed is 6 channels/second, a bit too slow for my liking. I added another 220,000 ohm resistor in parallel with R64. This changed the time constant of the scanning oscillator, increasing the scanning rate.

When fully squelched, a good portion of the battery drain can be attributed to the light emitting diode channel indicators. When the "manual/scan" switch is in the "man" position, my unit draws approximately 27 ma. from the batteries. Following up on a suggestion from Ed Doubek, N9RF, I always leave the PRO-24 in "scan" mode. When I want to listen to just one particular channel, I just lock out the others. This causes a single LED to blink on and off at about a 25% duty cycle, thus conserving battery life.

I bought this scanner at a reduced price, and in summary, after a several hours work, it performed at a level close to my expectations.

No dice bug boy. Just pointing out that everyone seems to dislike you. And there was a lot of people writing amusing anecdotes about you; not just Bill. As a matter of fact: I'm feeling rather inspired right now! Gonna write another one. (Isn't that great John?),

Now you wait right here! You're gonna *LOVE* my next post;

ya friggin' loon.

343. MACKEY'S BLACK CLAP?!?!

Newsgroup: rec.radio.scanner
Date: 1998-08-03 00:00:00 UTC
From: allsafe <allsafe@netwit.com>
Message-ID: <35C683DB.725A0031@netwit.com>
Source record: 149528

You all know of course that his "pest status" on this NG provides him the highlight of his personal life. He feeds off of the derision and humiliation handed to him by everyone on a daily basis.

Do you detect that he's trying to fulfill some sort of unsatisfied sexual need in the way he appears to enjoy the abuse?

Lemme tell ya why:

Mackey did a stint as a sailor after high school. Anyhoo, he got stationed over the Philippines. Now I don't know how much y'all know about the Philippines, but if you can't get laid over there, you don't have pulse. (And I hear you don't even need a pulse if ya got money).

Well, young Mackey had himself a time over there. Of course he heard the warnings about the diseases and problems of consorting with the local trollops; but that didn't register. He was thinking with something else. (And for the first time in his life, I might add.)

All good things come to an end (and Mackey's average was 2.3 seconds, in case your were wondering), but the Philippines tour was nearly over and Mackey was due to be stationed stateside.

So Mackey went and took his physical just like everyone else who was to return stateside. That's when the corpsman broke the bad news to Mackey:

"Dude," the corpsman said, "it looks like ya got the "Asian Black Clap."

"Until you have some PROOF, you should shut-up." Mackey said.
"Uh....dude...your penis is blue and green...."
"That's a LIE!"
"...and it's foaming."
"The stupidity of you is amazing."
"uh....whatever dude...you gotta wait here, the Doctor is gonna want to talk to you."

The Doctor comes in and gives Mackey the bad news in detail. Mackey did indeed test positive for the "Asian Black Clap" and Mackey can't return stateside until its been treated.

"Then treat me." Mackey said.
"The treatments are rather severe, John"
"Severe?"
"Yes: I'm afraid it involves amputation of your penis and testicles."
"NOOOOOOOOOOOOOO!"
"I'm sorry John, there's nothing else we can do. Can I schedule you in

for tomorrow?"
"NOOOOOOOOOOOOOO!"

Well 'ole Macky beats feet out of the Navy clinic. But he knows he has to get get himself fixed...no.....strike that.....get himself "cured". That's it. But he's gonna need another opinion. He didn't like the "TRUTH" he found at the Navy Clinic, so he was gonna ignore that one and search for something else he could call "TRUTH" that would suit his needs and let him keep his seeds.

He thought he found it in a local Philipino "Witch Doctor". He went to his hut and allowed the doctor to examine him with bamboo rods and peacock feathers:

"Is it the 'Asian Black Clap' Doctor?" Mackey asked
"Ah yes. Is 'Black Clap.' Yes."
"Awww man! The Navy Doctor wants to operate and take my genitals!"
"Haw-HO-HO-HO" the witch doctor laughed, "You no need operation!"
"Really?"
"Nooooo! American Doctors go to operate unnecessarily. No need."
"Awwww that's great Doctor...."
"Sure! You wait two...maybe three months top; and pecker will fall off all by himself."

Ya know John's stateside now-a-days......well, at least *most* of him is.

KA0SSF "I'm hard at work on my new invention - color radio."
<jmackey@parg.org> tried to deflect attention from his lies
about his degrees:

> If this was a ME Vs Bill thing then you would be right. But
> it isn't so I am not concerned with making my self look good
> in a comparasion to Bill.

Au contraire, Toilet Boy. It *is* and has been a you versus
Cheek thing for almost three years now. Your words and actions
over that period confirms the you versus Cheek datum. Reference
the following message which you wrote:

> > Subject: Open letter to B. Cheek & any others concerned
> > From: John Mackey KA0SSF <nowhere@anyplace.net>
> > Date: 1996/10/11
> > Message-ID: <325E11F8.4860@anyplace.net>

> >
> > I have not come down on you regarding your technical knowledge
> > of scanners, I think you are good in that area. My problem is
> > primarily with your grand-standing, lying/story-making, & your
> > arrogance.
> >
> > I want you to know that my issue with you WAS NOT because you
> > kicked me off of your scanradio echo. It was because of the
> > arrogant WAY you kicked me off.

The issue here, which you are trying to divert attention from,
is your lack of degrees. You've claimed to have a degree, but
when pressed for proof, you evade and avoid the issue like a
scared greased pig at a county fair running from a pursuer. As
was pointed out so eloquently in another message, you readily
provide the confirming information about your Commercial FCC
License while waving it under Cheek's nose. Yet, you can't
prove the existence of your degree. I said it before, and I'll
say it again: You are a liar and a fraud, and the degree does
NOT exist. If it does, prove it. Put up or shut up.

> Is that your problem, you think this is all about me Vs. Bill?

> It isn't! It started out being about Bill's conduct on this
> NG being unacceptable.

As usual, you're a liar. Your message quoted above clearly states
it started with your being kicked off the scanradio echo on fido.

The only conduct unacceptable in this newsgroup is yours.

> Then it took you to gang up with all your buddies to match me.

ROTFLMAO! Your paranoia is really running rampant today, Toilet Boy. If you think the people on the newsgroup have organized a concerted and coordinated series of attacks against you, you really need serious psychiatric help.

> You & the rest of them are afraid to take me on alone, you
> will only do it if you know you'll have the other's support.

I've been contesting your lies and proving you are a liar on my own for three years now. There have been many others who, like me, who will not tolerate your stupidities and we quite vocally tell you so. Some of the people that were active in this newsgroup then are not active now. Conversely, many of the people who are in your face today were not active then. And, then there is the contingent who have been active all along telling you your lies are not being believed. What you lack in intelligence, you make up for in stupidity.

To the best of my knowledge, there is not now, nor has there ever been a coordinated effort against you. There has been, however, a large backlash against you for your behavior in the scanner newsgroups. You are incredibly naive if you think people "are afraid to take" you "on alone." You're too stupid to recognize that people are smart enough to see through your lunacy and that they don't need the support of others to voice their contempt for you.

346. Re: John's abuse of this NG heating up

KA0SSF "I'm always out to improve myself. Every day I read until my lips get tired." <jmackey@parg.org> tried to avoid proving he has a degree again with more lies:

> There are ALWAYS people who have greater abilities, etc, not
> matter WHO you are? WHY would I care?

Why do you care? Because EVERY person you meet has greater skills and abilities that you do, Toilet Boy. You're so dumb, if you were an elevator operator, you'd lose your job because you'd keep forgetting the route. You're so dumb, the reason you never bought a color TV is because you didn't know what color to get.

You know, Toilet Boy, you've made me a believer in reincarnation. Nobody could get as stupid as you are in just one lifetime.

> You are just trying to justify your reign of terror on this NG!

LOL! The only person who feels my comments compare to a "reign of terror" is you. What's the matter ya friggin' loon? Afraid I'll expose more of your lies, AGAIN?

John "I'm the perfect argument for a mercy killing." Mackey
- KA0SSF <jmackey@parg.org> overextended himself:

> > Bill Cheek wrote:
> > Because he'll kick your arse up betwixt

> he better bring a couple friends with him then because he
> certainly isn't capable of it himself!

When I was a very young man, I received a piece of advice from an old man that has stayed with me through the years. He told me never to threaten people I don't know. He told me this as he lay dying on the sidewalk. He threatened someone that he didn't know and they had stabbed him several times in return.

Just remember this, Toilet Boy: you don't know me.

349. Re: Bill's abuse of this NG heating up

KA0SSF "You need to have a great memory to be as good a liar as I am" <jmackey@parg.org> continues with his lies and fraudulent claims:

> > Richard Kendrick wrote:
> > Your claims about having a degree.

> So how do you know it was a lie?

You made a public claim that you have a degree, and I publicly said you are a liar, that the degree does not exist. You continue to claim you have the degree, yet when asked for proof the degree really exists, you jump through every hoop imaginable trying to avoid providing that proof. You cannot confirm your degree exist because you lied, Toilet Boy.

> Please be specific with your proof.

Until YOU FOOL provide proof the degree exists, you are branded a liar and a fraud. Do you want to prove me wrong? Then put up or shut up. Provide the proof.

> (Of course, if you are lying you will NOT be able to give any
> specific data)

Since you have not provided any information proving the existence of your degree, it is YOU Toilet Boy who is lying. No surprise there.

350. Re: Bill's abuse of this NG heating up

KA0SSF "I'm an experiment in artificial stupidity that ran amok"
<jmackey@parg.org> showed why he's the best argument for
retroactive contraception:

> > Richard Kendrick wrote:

> > Your data is flawed, like you. You have not polled the
> > members of this news group, and are talking out your
> > derriere again.

> You have not polled the members of this NG either so
> according then YOU "are talking out your derriere again".

Since you can't read without moving your lips and hurting
yourself, I'm not surprised that you found reading my words
mentally exhausting and never noticed that I never said I polled
this newsgroup. I said your data was flawed (like you) because
YOU FOOL never polled the group. I'd make an ass out of you for
your stupidity (it's frightfully easy) but there is no way to do
that - nature did that long ago.

> > The FCC doesn't have data on former licensees.

> According to the FCC their database for the commercial licenses
> goes back to 1984.

You have no clue *when* Cheek held his commercial license, so,
once again, your logic (like you) is flawed.

> > I proved he *was* a member of Mensa, look it up in

> Bill said he was a current member. By your own statement he
> is NOT a current member.

According to Mensa rules, all he has to do to be reinstated is pay
the current dues. He does *not* have to requalify; once qualified,
always qualified. His IQ does not drop simply because membership
lapses. You're just jealous because you were born dumber than a
box of hair, and you're also angry that you failed to qualify for
Mensa and your hero Cheek made it. You're mad at yourself, and
taking it out on the members of this newsgroup because one-celled
organisms outscored you on IQ tests and qualified for Mensa.

> > > he blew up a sat dish when it landed on high power wires
> > > in Colorado.

> > Never proven.

> Witnesses have stated it to be factual!

Horse hockey! Those "witnesses" were your schizophrenic alter egos manifesting themselves through phony personas created by you. Therefore, still unproven.

I've always wondered if someone, like yourself, who has multiple personalities threatens to kill himself, is it considered a hostage situation? Maybe you should try it and let us know.

McCallister <chuckiex@ibm.net> writes

Hi Charles,

>Is there any difference at all between these two radios?

Two really.

Cosmetic: Black case on COM205 vs Grey Case on PRO-2006

Internal/Electronic: 220/240v AC transformer fitted om COM205,
110v or 220v AC transformer fitted on PRO-2006

The COM205/PRO-2005/6 etc can be powered from an external 12v DC SUpply
as an aternative to AC supply.

Other than these the COM205 is identical to the PRO-2006 in all apsects
so the OS-456 works with the COM205 just the same.

Hope this helps.

Cheers,

I`ll give you a good NON-partisan slam, fella. Why in the HELL you people feel that you are going to get rid of mackey by talking and talking and talking and talking about him, I will never understand. Like I said, mackey gets 10 times the bang for his buck, because there are people out there like you, who have to post a reply, rebuttal, or proposal every time he opens his mouth. Instead of 1 or two inane posts, we get about 20 inane posts.
Secondly, I don`t know what ever gave you the idea that mackey "wants to listen to reason", or is going to respond to criticism . mackey is a nut cake, a fruit loop. What he is doing has nothing to do with reason,common sense, etc. every time one of you people has to spout off at him, try to talk some sense into him, or offer a rebuttal to him, you fill his heart with glee. For your information, what he is after is ATTENTION. And YOU ARE GIVING HIM THAT VERY ATTENTION.
Sooner or later, people have to reach a level of maturity so that they realize that life is just too short to waste your time grappling with the mackeys of the world, that it is just a waste of time and effort, and just serves to aggravate everyone else and amuse THEM. So I HAVE A PROPOSAL FOR THIS GROUP. SHUT UP ABOUT MACKEY. USE YOUR KILL FILTERS. IGNORE HIM COMPLETELY. STOP RESPONDING TO HIS POSTS LIKE A BUNCH OF FIFTH-GRADERS. STOP GIVING HIM CELEBRITY STATUS BY SPOUTING OFF ABOUT HIM ENDLESSLY. Stop "Appealing to his sense of reason". Stop "proposing deals" to those who do NOT WANT A "DEAL". You might as well TALK TO THE WALL. This statement applies to those involved, and to those peripherally involved. I repeat. YOU ARE SIMPLY AMUSING HIM AND AGGRAVATING THE HELL OUT OF OTHERS. YOU ARE SIMPLY WASTING BANDWIDTH AND POLLUTING THIS NEWS GROUP.

900mhz phone are not secure. NOT ONE BIT. I have a friend that has a scanner that all you have to do is hit "manual" then punch in 900.0000 and hit scan... the walla! You hear telephone conversations which are cellular phone and 900mhz phone and cordless phones and so forth. Most scanners cannot pick up these freq, but there are alot of them out there (even sold by radio shack) out there. My friend said that the salesman at Radio Shack said thier scanners do not pick up cellular phones. He bought the scanner and was just messing around with it and ran into the phone calls by mistake. He listen to drug deals.. crimes in progress.. Husbands cheating on thier wives, ... and so on... once more don't let anyone teel you anything differn't! THEY ARE NOT SECURE

Numerical keys 1,2,3 double up with secondary functions of "bright",
"Dim" and "Off" for the LCD backlight - have you changed this by
accident (alhough from memory it defaults to bright on power up) ?

Can't think of any cases in point, but a fine can run into the tens of thousands of dollars, and 5 to 10 years of prison time. And, of course, confiscation of the scanner. I don't know how often this has happened so far, but US Customs is starting to inspect packages more thouroughly these days.

Does anyone have any cases they can share?

That is correct. Many airports use the lower end of the aircraft band, about
118 to 120 for each of their runways. 108 to 118 is used mainly for aircraft
tracking, and above 120 is tower to aircraft (and vice versa) communication.

TNC and "N"-type connectors generally work well. BNC and UHF (and mini-UHF)
connectors have a considerable amount of loss at this high frequency.

I would choose an "N" over TNC, though.

Normally, antenna switches have no shielding to protect from signal loss, so
I wouldn't recommend a switch, unless you find one with "loss protection".

It wouldn't be as easy for you, but I just switch the antenna manually --
connect a different one when it's needed.

1. Measure the voltage supplied by the wall wart power supply
to make sure it's adequate.

2. I don't recall how many bulbs illuminate the BC9000XLT, and
don't have the service manual handy, but check to see if
one of the bulbs has burned out.

>I would choose an "N" over TNC, though.

TNC and BNC share the same dimensions of the mating parts, the only difference is in the mechanical fixing method: screw versus bayonet. BNCs can rock, so TNC gives a more reliable connection. But the RF performance of a good quality BNC and TNC should be identical. Both are constant-impedance connectors, and both should work well at 1 GHz if properly installed.

N connectors are also good, and can handle higher power and more mechanical stress than BNC or TNC.

UHF (PL-259/SO-239) connectors were not designed for constant impedance and cause signal reflections. They are generally regarded as OK up to 300 MHz or so, but I wouldn't use them at 1 GHz. However, "mini UHF" connectors *are* constant impedance, despite their resemblance to the larger UHF connectors. They should be fine.

Finally, if you are using smaller cables and low power, several series of smaller connectors are availble. SMA connectors have good microwave-frequency performance and mount using a screw nut for good mechanical strength. SMB and MCX are push-on connectors so they are more convenient than SMA but less strong.

I've used all of the above types except mini-UHF. Generally, the connector you use depends on what's already mounted on the equipment you are connected to.

Dave

Thanks for the correction -- I should've realized that TNC/BNC are almost
the same.

I guess I was only making the conclusion that I've seen TNC connectors used
on cellular phones (*near* 1 GHz, although 200 MHz shy), and not BNC.

Regards.

I noticed all the expansion slots in my AR-8000, does any one know if
there are any boards that go in there?

Overheard in a staff room at a Portland hospital:

John Mackey, feeling very ill, went to see
his doctor, and was immediately rushed to the
hospital to undergo tests. He woke up after
the tests in a private room at the hospital, as
the phone by his bed rang and rang.

"This is your doctor. We've had the results
back from your tests and we've found you have
an extremely nasty STD called G.A.S.H. It's
a combination of gonorrhea, AIDS, syphilis,
and herpes!"

Mackey whined, "My gosh, doctor! What are
you going to do?"

"Well we're going to put you on a diet of
pizzas, pancakes, and pita bread."

Heartened, Mackey asked, "Will that cure me?"

"Well no, but it's the only food we can slip
under the crack below the door."

I try to keep tabs on that sort of thing,
and so far, no..... no scanners have been
interdicted and made into an issue.....

However......many a wayward CB'er has been
nailed by the FCC and US Customs for doing
the same damn thing.

At one time, there were millions of CB'ers,
all importing contraband like it was free.
So the federales directed some "attention"
to the matter.

My gut feel is that scanners are "safe" for
the time being, but this could change if
people keep talking about the Yupiteru and
other contraband stuff. Geez, the federales
never gave a whit about cell mods until
people whooped 'em up into a breakfast
conversation frenzy:

"Hey, hon, what new cell mods came out today?"

:-)

> So what was that "feature"?

RRQ's. (Return Receipt Requests).

A few of the newbies and green weenies to
computing didn't know how to set up their
software to handle RRQ's, so they sniveled
to the good Peter, who in turn, banned RRQ's
and me.

:-)

With hundreds of e-mails a week here, I use
RRQ's as a management tool. Those who don't
like 'em can eat my shorts or learn how to
deal with 'em. No big deal, really, but
you know how newbies and green weenies are.

It takes a while to break 'em of sucking
eggs....and picking their noses.....

Message-ID: <35c7fc61.1278954479@wlbr.iipo.gtegsc.com>
Source record: 149614

Does anyone have a manual for the AOR 5000 in electronic form that they would be willing to email me (or hardcopy via regular mail, or fax, or something)? I'm trying to decide if I want to buy this radio and the available information on the web site and elsewhere isn't really adequate. I understand the manual is quite long, so this is probably rather impractical... If this doesn't pan out I plan to try to order (buy) one from a dealer...

Source record: 149615

No, 1 and 3 ARE correct. I am in the process of taking flight lessons - I am sure you are not. I've been learning how both single civilian aircraft and passenger jets are used with IFR / MVFR rules.

Item #1: Aircraft DO NOT always operate under IFR flight rules. They DO, however, operate IFR about 98% of the time. Practically, "always" would be correct. Technically (when dealing with aircraft, technical corrections are required), IFR is not the condition at all times.

Item #3: If the airline's rules regarding use of receivers IN FLIGHT (only at cruise) are stated plainly in a magazine, booklet, brochure, on-board flight magazine, etc, PERMISSION IS NOT REQUIRED.

Don't believe me about either of these? Ask Gregory Knox (in this newsgroup, developed the Trunk Tracker technology) -- he is a pilot for Delta Airlines, with whom I've flown four times and have read Delta's Sky magazine, which says clearly, receivers may be used during cruise flight.

I am going to have to disagree, unfortunately. If a person buys a "Spread Spectrum" or digital cordless phone, there is NO scanner with the ability to eavesdrop. (note I said unfortunately) It will only be a matter of time before a "digital scanner" is made. For now, a digital cordless phone or digital cell. is not able to be eavesdropped on. bummer...

Hey Bill, that was 2 years ago! How time flies! You
were e-mailing an address of john.mackey@stream.com. Guess
what, that was actually ME!!!!!!!!

You were on there BEGGING for my e-mail address acting
like we were buddies, thinking I was my dad. Oh GOD that was
funny, I hadn't thought about that for a long time, it was late summer
1996. I'm laughing to hard, must stop computer until this
is over. hohohohohohohohohohohohehehehehehehehehehe

Well Blake I am still an active VE with the ARRL who says you
are wrong. Interesting, in my phone cals with them they
state they are very familar with you in the Official Observer
branch due to the numerous warnings you have been sent, according
to what I heard!

See Below from the ARRL:

Subject: RE: [Fwd: Mackey's VEC credentials under
Date: Mon, 3 Aug 1998 10:35:00 -0400
From: "Jahnke, Bart, W9JJ" <bjahnke@arrl.org>

1. The performance of all VEs is reviewed as each test session is
received
and processed or as otherwise necessary. If we were investigating any
VE,
such information would not be made public.

2. When problems are identified, the ARRL/VEC will issue remedial
instruction, or if believed more serious we will suspend accreditation
or
withdraw accreditation.

We have an obligation to ensure (to the best of our ability) the
integrity
of our VE program and to uphold the integrity within our VEs. If a
matter
were to surface that required our attention, the steps in item 2 would
be
our usual procedure as necessary.

>Are you afraid the competition might un-seat you from that position you have always held?

If the competition is to see who can flame the most in a single day, you win hands down! You also lead the pack in:
1. transmitting e-mail bombs
2. computer trespassing
3. forgeries
4. impersonating legitimate users
5. disrupting the newsgroup without cause
6. engaging in personal vendettas

I'm sure the evidence will come out if you are actually prosecuted for your alleged crimes in the alleged license selling scandal. Notice, I used the word "alleged." Until you are convicted, I think we should give you the benefit of the doubt.

That's all folks! Quack Mack goes back into the bozo filter.

No, and if you choose to post rediculous comments, instead send them by email so you don't make yourself look like a fool when I've already been corrected.

Also, TNC connectors give good mechanical connections (no rocking). PL-259 (UHF) connectors have a higher impedance and loss. I prefer "N" connectors because of very low loss on the 2m and 440 bands, and there isn't any rocking.

I don't know much about mini-UHF, so shut up before boasting your alleged ability to know more than I do.

Too, think before you post.

Mime-Version: 1.0
Reply-To: bcheek@san.rr.com
Newsgroups: rec.radio.scanner,alt.radio.scanner

Overheard on Portland's tavern scene:
=====================================

For a long time, Suzy had a fantasy of being
with the infamous John Mackey. One night in
a bar, she met Mackey in person and figured,
what the crap, she'd go for it.

So Suzy asked the Mackaroon to come home with her.
When the two got to her apartment, Suzy told
Mackey about her fantasy, and asked if he would
be a part of it.

Well, Smacksie agreed, so the two headed for
the bedroom. Suzy said, "OK, first, I want you to
undress me and tie me to the bed!" So Mackey did it.

By this time, Suzy was worked up into a passionate
frenzy. She looked up at the Mindless One and said,
"Now, big boy, do what you do best!"

So ol' Mack the Wack ransacked her apartment and
skeedaddled with the VCR, money, silverware, and
Suzy's best and sheerest negligees.
```

438. TrunkTracker: How to find fleet info?

Newsgroup: rec.radio.scanner
Date: 1998-08-03 00:00:00 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <6q5hhs$2d7@news.or.intel.com>
Source record: 149653

I just got a 895XLT and I am trying to figure out a local system (BYU in Provo Utah). I think it is a Mot. Type 1 or Hybrid system, but I don't know. When in Type II mode I miss some transmissions. Now I am playing with the User Defined Fleet maps to try to figure out how to configure this.

My main question is, if I change the block size (s-0 to s-14) do the codes displayed change or are they constant? For example, if the exact same radio on the same channel transmits with an ID of 400-12 when block size is s-4, could it display differently is I change it to s-6 (i.e 415-0)??

My theory is, I'll set the size to something with a lot of fleets (like 128 or 64) and then listen and record the highest fleet number displayed. Then, once I determine how many fleets are being used (in a block) I'll adjust the fleet size to match. For example if I get a hit like 724-3 I know there are more than 16 fleets being used in that block. Then I'll do a similar process at the subfleet level.

The only problem is if a radio will display a different ID just because I change the scanner setting, my process will not work. I am wondering if the scanner interprets the data differently if it is expecting it to be different, or will the IDs remain constant regardless of the block size that I set? Help!

Incorrect. A used cell "capable" receiver is legal to purchase
from private individuals from the net.

Read the following article:

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner/Introduction_to_Scanning

"It is illegal for companies to sell or import into the USA
recently manufactured scanners which cover or can be easily
modified to cover the cellular phone frequencies, but sales
by private individuals will still be allowed."

Listening to the cell band is something entirely different!
It is also now illegal to listen to cordless phones, even
though new scanners can receive the signals.

About the only way to get in trouble is to blab about
what you heard.

Robert

I've heard differently when I asked awhile ago in another group. I was wondering where I could purchase one, and about 10 people replied and said it was illegal to purchase a cell-capable scanner.

You might very well be correct, but I'll stick on the safe side and go by what I've heard. The info about the cell and cordless phones is correct, though. I used to have fun listening to cordless, but I don't do it as much anymore. Not because it's illegal -- just because there isn't much that's of interest, except in a great while.

Here in Minnesota (he says with a "Minnesotan accent"), not much happens here, ya know? <g>

Regards.

Jack,

I don't know what you need to do to get good protection against lightning in

the Ft. Lauderdale area. There must be some companies around there that specialize in that. I'd try to find out what they do. The general, the theory
behind lightning protection is to discharge the ground to the air before a sufficient charge builds up to cause a lightning strike, and that is typically
done by a lightning rod system.

If you have a WELL grounded antenna tower near your house, that may provide protection. From the apex of the tower to the ground, imagine a cone extending to the ground with an apex angle of 30 degrees. Everything within that cone is protected, in theory.

For a good RF ground, you could bury a LOT of radials cut to the frequency(ies) of interest at the base of the tower extending outward, and buried so you won't trip on them. They would work just as well if laid on the surface of the ground. 120 radials have been mentioned as providing a superior RF ground. Two driven rods 10 feet long do not constitute a good RF ground, regardless of what another respondant mentioned.

If properly installed, the two ground rods meet NEC requirements for the grounding electrode system for your incoming AC power. But you asked about SAFE. I do not know. It could be that the lower portion of those pipes is corroded, and what you think is a total of 20 feet of metal, with most of it in contact with ground water, could actually be far less than that. In general, the more metal underground, the better, provided it is properly installed.

I think your current practice with regard to the antenna is your best course of action, all things considered. Disconnecting and grounding the antenna is simple and effective in preventing lightning damage to your radio. If you are intent on improving over that, add supplementary groudning electrodes in accordance with the NEC. Ed

Hi,

I have a Realistic Pr0-26 handheld scanner. I love it. But my reception on the highway of Mass State Police 159.030 is never that great. I know the hear the calls better than I do. I have an external Radio Shack magnetic antenna with those resistor type nodules on the rod. My question, is this reception typical for a handheld, or could I optimize my antenna length for that frequency to improve reception?

Sorry if this is a stupid question, I'm new to this.

This is an open and un-moderated NG. Use a news reader with filters, a few well chosen filters will eliminate much of the non-scanner related postings.

I'm struck by how often the "ban 'em" attitude gets expressed. Sure, there's a high percentage of noise here. But as scanner enthusiasts we enjoy our hobby by listening to all the "stuff" out there. We are listeners. We balk at rules that try to stifle our ability to listen. Why be so quick to squelch others? You simply don't listen to that which is obnoxious, off-topic, whatever.

If I am understanding this law correctly, buying ANY cell-capable scanner is illegal. It is usually the buyer who is prosecuted.

However, I've heard only imported scanners are the ones that are the "most illegal" to buy.

Hey Blake, according to your buddy K4CC you are wrong! Read below:

>Subject: Re: Mackey's VE credentials under investigation?
> Date: 02 Aug 1998 23:33:10 GMT
> From: k4cc@aol.com (K4CC)
> Newsgroups: rec.radio.scanner
>
>An FCC investigation doesn't trigger a "warrant".
>
>So according to K4CC you are wrong or are lying as "an FCC
>investigation doesn't trigger a 'warrant'".

Also, HOW & WHY would any type of investigation of "VEC" actions
(as YOU stated) involve me or my father. Neither of us are
a "VEC"!!!!! Really Blake, go ask the FCC as they keep a record
of all "VEC" credential holders.

Besides all that, my father holds one of the lowest
amateur radio licenses the FCC offers a "(codeless-)technician"
the exact same license as you. Now you know Blake since you hold
the same low level (codeless-)technician license as my father
that this license is the most restrictive off all amateur licenses
& those license holders are not eligable to participate in any
"VEC" program. So WHY would they serve a search warrant on his
house?

The answer is simple, you are lying!

Mackey's Bad Days...as gleaned from hearsay,
rumor, newspapers, police blotters, and hospitals.
==================================================

A fierce gust of wind blew John Mackey's car into
the river. She managed to break out a window,
climb out, and swim to shore-where a tree blew
over and bashed her skull.

Mackey was filming a documentary on "The Dangers
of Low-Level Bridges" when the truck she was
standing on passed under a low-level bridge-knocking
her senseless.

Smacksie was so afraid of dentists that she asked
a fellow worker to try to cure her toothache by
punching her in the jaw. The punch caused Mackey
to fall down, hitting her head, again knocking
her senseless.

Mackey narrowly escaped death when a terrorist
bomb flattened her home except for one wall.
After treatment for minor injuries, she returned
to the scene to search for personal effects.
The remaining wall collapsed on her, and cold-
conked her yet again.

Depressed since she couldn't find a job, the
Mackaroon sat in her kitchen with a gun to
her head, threatening to kill herself. Her
husband pleaded for her not to do it, and
after about an hour, Mackey burst into tears
and threw the gun on the floor where it went
off and hit her husband in the groin.

Not long ago, John Mackey was laid out in a
coffin, presumed dead of brain atrophy (he
had really passed out as a result of drug
and alcohol abuse). As mourners watched,
she suddenly sat up. Her 3rd cousin dropped
```

dead of fright.

The Mindless One, hit by a car in New York City
in 1991 got up uninjured, but laid back down
in front of the car when a bystander suggested
to pretend injury to collect insurance money.
The car then rolled forward and over her ankles.

Surprised while burgling a house in Beaverton,
Mackey fled out the back door, clambered over a
nine-foot wall, dropped down, and found herself
in the city jail yard.

Smacksie and another motorist had an all-too-literal
head-on collision in heavy fog recently. Each was
guiding her car from opposite directions but both
near the middle of the road. At the moment of impact,
their heads were both out of the widows where they
smacked together. (Smacksie, get it?) Both were
hospitalized with severe head injuries. Their cars
weren't scratched.

So don't ever wonder how's come The Magnificent Idiot
is the way she is. How would you be if you'd been
through all the shit this popinjay has?

Overheard on another newsgroup:

===

John Mackey found himself in dire trouble.
His business had gone bust and he was in
serious financial trouble. He had developed
renal kidney failure, cirrhosis of the liver;
testicular cancer; a venereal disease, and
a lower gastric disorder. He was so desperate
he decided to ask God for help. He prayed...

"God, please help me. I've lost my business
and if I don't get some money, I'm going to
lose my house as well. And I need a doctor.
Please let me win the lotto."

Lotto night comes and somebody else wins it.

Mackey again prays...

"God, please let me win the lotto! I've lost
my business, my house and I'm going to lose
my car as well. And I'm sick and dying without
medical care.".

Lotto night comes and Mackey still has no luck.

Once again, he prays...

"My God, why have you forsaken me?? I've lost
my business, my house, and my car. My husband
and dog are starving. I don't often ask
you for help and I have always been a good
servant to you. PLEASE just let me win the
lotto this one time so I can get my life
back in order."

Suddenly there is a blinding flash of light
as the heavens open and Mackey is confronted
by the voice of God Himself:

"Mackey, meet ME halfway on this.....
Buy a damn lottery ticket first.....
you friggin loon!"

484. Richard Kendrick is a FOOL!

Nope. Peter Laws booted me off the SCAN-L list
because a few green weenies set up a cacophony of
howls and sniveling over a certain feature of my
e-mail software.

So if the good Peter Laws prefers idiots and imbeciles
on his cherished and beloved List, then who am I
to stand in his way? And hey, it is HIS list.

The past is not at issue here. It's what's
fixing to come down that's in focus. You've
sold amateur radio licenses long enough, don't
you think?

Doesn't matter. It's what the FCC thinks that
matters the most.

Eh?

Yes it is a freq assigned to my local PD. I have an RS Pro60 and have programmed all the freqs listed in Beyond Police Call plus freqs that I've picked up from limit scans and info from others. I can always here the phone rining and the person (or machine) that answers. Then I can here the officer for approximately 10 seconds and he fades away. The remainder of the conversation, no matter how long, is always the called party. If I turn the volume wide open I can barely here the officer, meantime, the called party is always crystal clear, next door type reception...what gives???

Agreed, since the rumor going around now in various ham oriented
mailing lists is that eight people who allegedly purchased amateur
licenses from Mr. Mackey have been granted immunity from prosecution
in order to secure testimony in this far reaching investigation. I
would like to state that these are just allegations and rumors at this
time, no one will know the facts about this investigation until the
fcc or local authorities release some verifiable information.

No lie at all! I specifically stated that this should not be judged
until the information is verified that you are selling ham licenses
and other improper acts as a VE.

>And you wonder why I don't trust you! You will lie or do anything
>you have to in order to make yourself look better & other who you
>fear look bad. Your actions in regard to me are a perfect example of
>this.
>
Never asked for your trust John. And I have not lied, unlike your
lies about Bill Cheek being banned from FIDO, something you
cannot substantiate.

>Anyway, in regards to your pathetic accusation that my "VE credentials
>are under investivation" by the "FCC/ARRL", let me say the following.
>
No accusation from me John. Just asking if anyone else had
heard about your alleged selling of HAM licenses.

>1. I have never been a VE

Hmmmm.

>2. I have never been investigated or accused of any improper actions
> or illegal activities as a licensed radio operator.

Can you provide proof of this?

Dave to you have any information as to what Mackey was getting in return for handing out licenses like they were candy?
It is a shame that an extra class radio operator would sink so low.

I would hope he has not exchanged licenses for some type of favors or money in giving passing scores to these people.

517. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-08-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6q33g4$bdv@news.Hawaii.Edu>
Source record: 149754
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Robert,

> Is there any difference at all between these two radios?

Basically, they are the same but one is the
European model. The Com205 does have the
240VAC transformer (needs to be swapped out
for use in the USA) unless you use the 12VDC
connector. The avantage is Frequency coverage
is continuous from 25-520MHz and 760-1300MHz
(includes cell freqs).

What about the cellular and other bands and stepping and mode within those bands? Being designed for the European market has to have an impact there. I'm just curious how much of an inconvenience it will be to make those changes, whether it is just the one-time flick of a switch or what?

From: lui@netcom.com
Message-ID: <luiEx3H6x.29J@netcom.com>
Source record: 149759
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

I've owned an old RS discone w/o the low band whip for several years and just bought a new model to put up at my new house. Does this antenna work well for TX'ing on 6M? I imagine it should do fine on 2m, 1.25m, 70cm, 33cm and 23cm, but I've heard mixed reviews on 6m.

Does the low band whip help on 42 MHz (CHP, highway patrol here in CA) frequencies?

My other option is to pickup a 6m/2m/70cm tri-band omni from Comet or Diamond, but then I can't TX on 1.25m, 33cm, or 23cm.

For the most part you are correct, however Flight Service Stations often have remote receivers co-located with the VOR and use the VOR's transmitter and frequency to transmit on.

Wrong again bozo mackey , I speak the truth and that is why your trying to
discredit me because I am using dejanews.

The reason I am using dejanews is due to all of the mail bombings you and your
buddies have been doing to my regular email accounts.
Of course you will deny doing that , but if your capable of misconduct in your
activities as a VE I guess your also capable of mail bombings.

So what your saying here is that you could be currently under investigation for misconduct by the ARRL. I am surprised to see you admit that there is the possibility of an on going investigation into your VE activities.

He sure is Dave, mackey is getting frantic because all of the facts are coming out about the warrant being a contrived story he made up to get others on the newgroup to go against Bill and then had Nick OBFD back him up on it.

And as can be seen on the newsgroup when mackey is asked the source of the information he cannot produce one , thus this shows mackey made the whole thing up.

Some systems attain a degree of privacy by not re-transmitting the input side of the conversation. There is no requirement to transmit that side of the conversation since it is only intended for the person on the landline end of the connection (usually). Conceptually they could do this by simply breaking the audio connection between the repeater receiver and transmitter whenever the receiver squelch is open. In practice they probably use a hybrid which is why you can sometimes hear a little bit of the mobile side of the conversation.

Message-ID: <unOK0ODw9GA.274@upnetnews03>
Source record: 149322
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have one of each and love both of them. You would be happy with either. They are better VHF/UHF rxs than SW but are still OK at HF. The ability to easily improve IF selectivity in both would have been nice (or the mfgrs could just use slightly better filters).

As much bad press as ICOM has gotten (much of it deserved) for its crappy customer support, I'd still probably buy from them since the importer of AOR seems a little shaky (given that EEB shut down overnight and the importer EDCO is obviously the same company). I have seen in a number of places that AOR is going to open a US office in southern California. If they do that, I would suggest the AOR as perhap being a slightly better overall receiver than the ICOM. Having solid US representation would make the choice pretty clear.

Good luck!

I don't really see many of either of these rxs showing up for sale. Good sign in my opinion. sb

Hi steve ,
You know ...my first guess too was ..a mixture of image signals
all overloading the RX....I still think the RX IS overloaded or
distorted ...but ......notice the dual tones ...excatly like fire
department dispatch tones ....well ...if you listen close ..it sounds
like the digital information string starts at the same interval....
after each set of dual tones ...??? I dont think its pocsag .....unless
like you said ..its mixed with other stuff ...like 2 tone plectron or
zetron type paging signals ... (at the same time) ...there are so
many NEW types of modulating signals out there lately ...it hard
to tell any more ....there are at least 5 NEW types of vhf (and up)
signals here in central California ...lately ....2 of them in the 850
mhz trunking bands ...one in the high vhf aircraft band at about
139 mhz (a strange pulse / tone sig ....and ..the police (i think)
have an unusual MDT like signal with a strange NRZ wobbling tone
overlayed on it ...in the 460+ mhz band ....who knows ..??

a_alpha1 - TIgEas LAiR

542. Kansas Column 0898

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: Andy B <andyb@qni.com>
Message-ID: <35C77289.1D1B@qni.com>
Source record: 149374

08-98

It was late again. Sorry. Had a couple of family emergencies (everyone will be fine) to deal with right at the end of the month. Things are looking up, so here goes.

This month's column appears to be the "Topeka/Shawnee County Column." Almost all the stuff centers around that area. A fellow named Wally has access to lots more stuff for Topeka that should be coming in a future column. It isn't all Topeka, though. There is stuff from other areas as well.

1. Topeka/Shawnee County Trunker and TrunkTracker groups/Ids
2. Topeka/Shawnee County radio numbering system
3. Pawnee County 9-1-1
4. Kansas City MO fire photographs by Wild Bill
5. More Topeka info
6. Rush County & 800 MHz

I have been fooling with the Trunker program for the last few months. Trunker is a freeware program that lets you follow Motorola trunked systems on the computer. See the February 98 issue of the KS Column (archived at Dr. Sm0ke's site http://www.crcltd.com/sm0ke/scanner/) for more details on the mechanics of Trunker. For those of you that have been thinking about utilizing Trunker but haven't yetï¿½do it! Real fine program. It provides talkgroup information like the Uniden/Radio Shack TrunkTracker scanners, but goes several steps farther than that, too. Trunker lets you identify each individual radioï¿½portable, mobile or console position. Once you determine, for instance, that Trooper k-123 uses a particular radio, you can flag that ID with text indicating who uses it. No matter what talkgroup K-123 is on, Trunker will let you know it is him. The alphanumeric flag feature is available for talkgroups as well. An additional feature is the ability to color code talkgroups or IDs as well as making it flash or beep when active. What I have here is the lists of Topeka/Shawnee talkgroups and radio IDs that I have accumulated so far. I entered most of the talkgroups from a list published in an earlier column, but Trunker added those with a "?" listed as a user when it encountered traffic on them. They need to be identified, so if you have any idea let me know. All the Ids are from actual monitoring. TrunkTracker users can utilize the talkgroup information, but the ID info will be of no use to them. The hexadecimal number is listed as well as the decimal number for the Ids and talkgroups. Trunker displays both. The hex code is what Trunker uses and the decimal number is for us humans. Hexadecimal might have made more sense to us if we had 16 fingers, but nature figured 10 was

enough. Additionally, some of the talkgroups listed don't fit into the typical progression of codesï¿½particularly those with a "?." Usually the step between decimal codes is 32. I believe that some talkgroups will deviate from the normal pattern if they are patched groups or other special groups. That accounts for Trunker adding them to the list.

Shawnee County/Topeka/KS Ids.

Every time Trunker finds a radio ID it lists it like the following example:

0067 "New @ G:11b0/SHCO Main Disp" 103

If you know to whom it belongs you can edit the text to reflect the correct user. My list has scads of entries like the one in the example. Rather than listing all of them I will simply give you those that I have made an ID. Not all of them are real specific, but it is the best I can do with the limited knowledge I have of their agencies.

07ff "PD Unit" 2047

Next we have a contribution from Wally. He has the radio numbering system for the Topeka/Shawnee County trunked system. Now that I have the poop on radio numbers, I can start monitoring the system and be able to ID more hits. I can't wait to get started!

Topeka PD has 3 shifts. A, B, & C. These are the various territories within the city.

430 North Topeka
431 North Topeka
435 West
440 Oakland
441 Downtown
442 East Central
443 North Central
444 Central
445 Central
446 South Central
447 South
448 South West
449 East
450 South East

Supervisors are 401, 402, 403, 404.

Helicopter is 400.
Traffic is 100 numbers
Sheriff is 200 numbers
Reserves are 300 numbers
Detectives are 500 numbers
School police, Washburn, and V.A. Police are 600 numbers
Municipal Court and Services are 700 numbers.

There are several others that have assigned numbers, but most of them are administration. Sheriff's Deputies have assigned numbers from the day they are hired. They keep that number there whole career. 200 is the Sheriff, 201 is the undersheriff. but for the most part, anyone else can be anything in the 200 series.

Thanks for the detailed information, Wally.

3. Doyle says that Pawnee County is working on going countywide with 9-1-1. Larned is the only city that is currently on real 9-1-1. Smaller towns have routed 9-1-1 to their fire department phones. (Makes me wonder what happens when you need the Sheriff.) It sounds as if each community wants to remain a separate entity and not lose any control over anything. When all the arm-wrestling among the powers-that-be is over that won't be the case. Doyle has hopes that when it comes to pass they will add some new frequencies. Now everything is on one frequency. Imagine the confusion during a critical incident.
Thanks, Doyle.

4. A few weeks ago there was a big honker fire in KCMO. I guess that a 7-alarm fire could be considered a "big honker." It burned down a number of businesses and warehouses. Wild "Ansel Adams" Bill heard the commotion and grabbed his cameras and headed for the scene. Bill was able to get a bunch of outstanding photographs of the inferno. He zapped them to me via e-mail. I was impressed. If anyone would like me to shoot them to you, let me know. Bill, I hope you don't have any copyrights on them because I have already spread them around to a few other folks who like that stuff.

5. Greg read last month's column and had a comment about the testing of the Topeka/Shawnee Co system. His sources indicate that all the testing is done and the system works as intended. (Eat your heart out, Kansas City MO!) All 15 frequencies are active and part of the trunk group. Keep listening and let us in on what you discover. Thanks.
Topeka/Shawnee Co freqs: 856.2125, 857.2125, 858.2125, 859.2125, 860.2125
856.4875, 857.4875, 858.4875, 859.4875, 860.4875
856.7375, 857.7375, 858.7375, 859.7375, 860.7375
Gregï¿½I NEED YOUR E-MAIL ADDRESS! Somehow it never got put on my list, and I can't find it, so please send it to me and I'll get it poked in there.

6. From Larned againï¿½Doyle relays that the new 800 MHz tower in Rush County is up. It was planted about 1 mile south of Rush Center on the east side of 183 Highway. It glistens with strobe lights. "Only the best!" Doyle says. From his vantage point it looked as though they were going to add more to it. Right now it is about 200 feet tall and growing! I bet that by the end of the summer there will be some interesting listening in the area. Whether it is KHP, or KDOT, or both is a mystery. If I can scrounge up a map of sites and frequencies I'll let you know.

No more for this month. Just too darn hot to do anymore! I'm outta here till September. See ya then.

Andy

Sorry, this is NOT the correct headers to be a message from
OBFD! Also, when OBFD was communicating with someone friendly
he started the messages a certain way. You forgot to enter it into
your post you forged to look like OBFD!

> >Bill Cheek kicked John off of the fido net so John has decided that he will do
> >the same for Bill on the internet.

Not true.

> >John has come up with a sure fire ideal, and since Cheek is not one of your
> >favorite people you can help us in getting rid of him once and for all.

If I had come up with a sure fire deal, why would I need -or want- any
help?

> >John's ideal will do this, he is going to accuse cheek of sexual abuse
> >with young boys and this will make people turn against him.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Aeronautical Frequencies [87.173]

108.000 - 117.950 NavAids - VOR & localizer, 50 kHz step
118.000 - 121.400 ATC - towers & ARTCC
121.600 - 121.925 ATC - airport ground control
122.000 - 122.650 Flight Service Stations, 50 kHz step
122.700 - 123.500 * (see below)
123.600 - 128.800 ATC - towers & ARTCC
128.825 - 132.000 Enroute - airline company freqs
132.025 - 135.975 ATC - towers & ARTCC
136.000 - 136.475 Enroute - international
136.500 - 136.975 Enroute - domestic & international

25 kHz default spacing, AM for voice

UNICOM - Aeronautical advisory station at airport [87.217]
122.700 122.725
122.800 123.000
122.950 at airport w/ full-time tower
122.975 above 10,000'
123.050 123.075 at heliports

Multicom - common freq. at uncontrolled facilities [87.241]
122.850
122.900 primary CTAF
122.925 Fed/State natural resources

FSS - FAA Flight Service Stations [87.187]
122.000 122.050 EFAS "Flight Watch"
122.100 receive only (w/VOR)
122.200 standard FSS
123.600 123.650 AAS Airport Advisory Svc

Aviation Support - training, gliders, ballons, etc [87.323]
121.950
123.300 123.500
122.775 122.850 aviation services

Misc.
121.500 standard emergency freq., ELTs
123.100 Search And Rescue - actual
122.900 Search And Rescue - training
123.100 control tower at special events
122.825 122.875 Enroute airline ops - local area
122.750 air-to-air - private arcft
123.025 air-to-air - helicopter
131.550 ACARS - digital (airlines)

Ryan,

Please don't post binary files to non-binary newsgroups. Because binary
files tend to be large and some newsreaders can't handle them, it is
customary to post them only to groups that specifically allow them. Such
groups are usuallt readily identified by having binary in their name.

John,

I too was looking to see if my DC car adapter would work with the SC150. It does multiple voltages and can change polarity... just have to check the milliamps. I've only had my SC150 for a week but it appears to fit my modest needs. My only real regret, gripe, negative... is the darned Ni-Cad battery pack. It is not very convenient when you are away from a recharge source. I was hoping there might be a third-party battery tray for alkalines... but there doesn't appear to be any such thing available. I may have to look for a recharge unit that can handle the SC150 battery pack, then buy a spare to swap with the original.

Hello Again RF ,

You seem to have a wave file that contains an array of mixed
paging signals ..... that sounds basically like the alert system for
a fire department (for example) there are 2 tone location
alerting tones interspersed with DIGITAL message content ......
probably information directed at each location alerted ....This
sounds somewhat similar to some of the older style paging tones
(like generated by a Zerton) but not quite the same ....
I dont believe that this signal is an actual PAGING signal .....
at least not in the USA ..(.used by regular paging service providers.)
There are some systems that are used by school systems and
local government that have service tones like these too .... They are
rather rare and are exclusive alpha numeric ....
Of course this is just my own opinion about the file ...maybe some
other interpretations are possible out there ...?? How about it ..guys..

Bryce,
There should be something here to help.
http://www.li.net/~j4dice/links.html
As for the race, I suggest a minor purchase at the track of a frequency list. I have no proof, but I suspect that NASCAR shuffles the radios and even the teams don't know all the correct match-ups until race day. Many of the same frequencies but used by various teams and drivers over the season. Without a current list you will hear all the same action but you won't be sure who's talking.
I usually pick a few top conteders and enter their frequencies at channel numbers that rerlate to the car number. Example: Car #10 (maybe three freq's given on the list) entered at channel 10, 110, and 210. During the race it's very hard to hear the little scanner speaker so earphones may help. A second scanner for media feed can also be interesting.
Overall, I would guess you will get more enjoyment out of the local public service freq's.
Robin

> All you've done is expose your own lies!

Anytime someone tells the truth about you, Toilet Boy, you interpret it as lies. You are so twisted into your own little delusional world you can't even see straight enough to urinate without hitting your shoes. Another example of the mental limitations and genetic deficiencies of your species.

You're such a pathetic creature you can't handle the truth about yourself: you are a liar and a fraud. You can't handle the fact that I, and others, have proven you to be so many times.

You are so ignorant you believe that just because you went to the Tammy Faye Bakker Cosmetics School for Public Bathroom Sex Toys for two whole semesters (never did graduate did you), the world owes you even an iota of respect. Guess again FOOL.

> the military!

Still spewing more lies as usual, Toilet Boy. You claimed to be 6'1" tall in a previous message (shown below). According to the recruiting offices here in Phoenix, *all* branches of military services do NOT have a height limitation. The only reason you would be ineligible for military service would be you never graduated from high school, had at least a GED, or possessed a criminal record (that's coming).

We know you are too stupid to have finished high school (let alone have any college degrees), so that's why you were never in the military. Also, being a military brat doesn't make you a part of the armed services either.

You're still a liar and a fraud, Toilet Boy.

KA0SSF "I'm the Queen Liar around here and don't you forget it!" <jmackey@parg.org> tried to bore us with more of his lies:

> > Bill Cheek wrote:
> > Well, all I ever heard him sniveling about was his kids'

> hehehehehehe, I've never had KIDS Bill!

Let's just see about that, Toilet Boy.

During the period from May 3 1996 to June 23, 1996, you used the address of traveler@cyberway.net. You posted a total of nineteen messages to various newsgroups using that address. Four were simple test messages, ten were radio related, and five were related to the issue of 'your children'.

Just to show the messages are really from you, I've included a couple of radio related and test messages from the same period as the children messages.

In the message dated May 5, 1996 and June 23, 1996, you use the phrase "my kids." Since those messages are from you, then you have children.

Now in the message of June 19, 1996, you claim to be half Indian. Yet, in the message of June 23, 1996, you said you inherited your dead sister's (did you tell her that she died?) children, who were half Indian. You said their father was half Cheyenne. That would mean your sister's race didn't include Indian. That means you are probably not full or even partial Indian. Another lie from you, Toilet Boy.

After reading the messages (listed below for your disgrace), it is very easy to come to the conclusion you've lied again. Either you do have children as you claim below, or you don't as you've claimed above. Either way, you lied.

---------- the children messages ----------

I was basically raised naked with my cousins during the summers. I
hated wearing
clothes & so did my cousins se we hardly every wore them. I think I was
about 15
by the time I started wearing clothes regularly.

It seem natural & ok to be naked at the time. In that area naked kids
were ok, but
when you reached puberty they clothing was expected.

During the warm months my kids are usually naked, no big deal.

> I would like to see what others think of this. I seem to remember

During the summer I was almost always naked until I was about 12 yrs old
then I
started wearing shorts or swiming suits. But I still would be naked
occasionally until I was about 16 or maybe 17.

I think it was healthy, I preferred being naked back then. I still go
naked
at apprpriate times.

I was raised during the summers on an Indian Reservation (I'm half
Indian) I was
naked almost all the time along with my cousins untill I was about 14 or
15. The
only time I ever remember being self consious about being naked was one
time

when we went off the reservation a long way to visit someone in the city. I was
not on the reservation & there were no Indian people around & I didn't have any
cloths with me. A few people commented about me being nude & then I became
embarrassed about my nudity. A couple women laughed about me being naked & said they
thought it was "cute".

I was about 8 or 9 at the time & I couldn't find
any cloths so I hid in the car for half the time. Finally we left & went home to
the reservation & I felt OK about it. Looking back on it I can see my feelings about
being naked depended on the cultural acceptance, I preferred being naked.

> above them or at the view behind them?

If you just act normal you'll be fine. It isn't uncommon for a man's penis to
occassionally become erect, that is natural & happens without thought. Others
may (if they know you) giggle or tease you about it, but usually nothing
would be said at all. Many men ask the exact same question, and find it is not
a problem.

I was raised in a nudist environment & during the summer my kids are always
naked, it is more healthy.

Try going to a CO camp, you'll probably like it. The people are nice & there is
a nice feeling about warm wind blowing on your un-covered skin.

Subject: Bed wetting with native american children
From: traveler@cyberway.net
Date: 1996/06/23
Message-ID: <31CD1178.1579@cyberway.net>

Newsgroups: alt.native

2 years ago my sister died & I assumed guardianship of her 2 children. They are boys
7 & 12. They have had a consistant problem with bed wetting all their lives.
Every morning they will usually both wake up to wet bed sheets, they are so used to this that they know to pull the sheets off their beds and head for
the shower to clean themselves. (they sleep naked to save their clothes from this)

I have tried getting assistance from a doctor who tried
a few things with no change & said there was nothing else to do. My girlfriend & I have tried all the obvious things of cutting off water & fluids after dinner & making sure they pee before they go to bed. For a little while my girlfriend & I were even watching them toilet pee before bed just to make sure they were really doing it.

I have tried getting them to wear diapers at nite but they absolutely refuse unless we are spending the night somewhere else. They say there is nothing they can do about
this and appear to accept peeing the sheets at night.

When they have their nightly accidents it is a total urination relief, not just some dribbling (unfortunately).

The youngest boy has had a few accidents during awake day time where he has
wet his pants, but this has only happened 4 or 5 times so I am not as concerned
about it as I am the nightly bed wetting. It's embarassing because when I am away
for business my girlfriend has to clean up the boys after their nightly peeing accidents.

These boys are half Indian, I think their father was Cheyenne full-blood.
My girl-
friend (she is not indian, either) said she once baby sat an indian kid who had the same problem. So I am wondering if this is a common problem with all indian boys or all indian kids or an isolated problem. What is the resolve for helping indian kids be able to hold their urine & sleep dry. How do Indian families handle this?

> you want.) We enjoy having 435 around. Most of the people who use 435
> are quite intelligent and very good people.

I own the 147.435 repeater in Portland, Oregon. My repeater is similar,
but not
as mouthy as, the LA repeater. I often hear complaints & bitches from
people about
my 2 meter box (but never my 6 meter or UHF). If they don't like what
they are
hearing there are three things they do -

1. turn down the volume, 2 turn off the radio, 3 change frequency.

Any licensed ham sould be capable of this.

Why would somebody rant & rave & carry on like this with their bitching?

Watch the ROSANNE show on TV sometime. It is a prime time show. You
all the same
language then.

KA0SSF "I love nature, despite what nature has done to me."
<jmackey@parg.org> continues to pathological lying spree:

> > Richard Kendrick wrote:
> > It *is* and has been a you versus Cheek thing

> maybe to YOU, not to me.

For nearly three years now, you have demonstrated your vendetta against Cheek and anyone who speaks out against you quite clearly. Your denials to the contrary are mere lies, Toilet Boy.

> > The issue here, which you are trying to divert attention from,
> > is your lack of degrees.

> How do you figure, that wasn't being discussed at all?

Sure it is FOOL. Your vendetta has included hounding Cheek for information regarding his degrees. You've used your supposed degree as a cudgel trying to elicit information about Cheek's degrees. I have the information about Cheek's degrees, and I know how much it galls you that I do. Cheek has backed up his claims of holding degrees, yet you never have. You made a public claim that you have a degree. I made a public statement that you lied about having those degrees. You've never come up with a shred of proof to back your claims. You've been proven a liar several times over. If you expect me, or anyone else, to believe your claims, prove it. Put up or shut up, Toilet Boy.

> The FCC license is a matter of public record.

I stated your and my commercial licenses were a public record several messages back. You're just getting that into your thick skull now? Such a moron you are, Toilet Boy.

> So what's your point?

The point is you came up with proof of your commercial license quickly, yet you can't prove your degrees. Even for you, Toilet Boy, proving a piece of fiction (your degree) is impossible.

> > I've been contesting your lies and proving you are a liar on
> > my own for three years now.

> Strange, I've only been on the internet for 2 years & 3 weeks!

Yes, your are one strange lower life form, Toilet Boy. Yet again, you lie about your time on the internet. Telling time and reading

a calendar is something any high school graduate can do. But, you never finished high school, let alone earn a college degree, did you FOOL. Just so you know, you have been on the net since January 1, 1996, when this post debuted:

b > good buddy, we be gone and down.

Hey Bob -
What are you trying to be, the REC.RADIO.SWAP Good Will Ambassador??

lay off the guy

... You can't truly appreciate being single until after you've been married.

Your last sentence would imply you've been married before (perish the thought). How would you know what the man was experiencing if you've never been married? That's quite remarkable especially when you consider that there are no females of your species in existence. Maybe Cheek knows more than he's telling when he says you're a hermaphrodite. He's right when he says you have a good grasp of your own sexuality; and that's the only sex you ever get.

> Are you saying you knew me before I came to the internet?

Fortunately, no. Judging by how you behave here on the internet, I'm not surprised you've encountered others like myself who have successfully challenged your stupidities and publicly shattered your lies before you migrated here.

573. So-called "Software Radio" tech and scanners?

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: Bryan Costin <bcostin@clark.net>
Message-ID: <6q8ich$74p$1@clarknet.clark.net>
Source record: 149405

I ran across this interesting article on TechWeb earlier this week.

Is Software Radio A Done Deal?
http://www.techweb.com/wire/story/TWB19980801S0003

Here's a brief excerpt:

"The visionary software radio is most likely a portable device with relatively few integrated circuits (ICs) or hardware components. Rather than a battery of inductors, tuning capacitors, and intermediate-frequency components, such a radio will likely utilize an integrated RF front end and a high-million-instructions-per-second digital signal processor and microcontroller. The frequency at which the receiver operates, the modulation scheme it deciphers, and other features are chosen and programmed in software."

To my decidedly non-expert mind, this sounds like it could have some interesting applications in the field of scanner technology. (In fact, it sounds a little like what the WinRadio and the similar Icom unit already do (though, again, I have no idea how the actual hardware used compares.))

Am I deluded, or could this have some potentially useful application to our favorite hobby?

>Should my radio be able to survive a direct hit at the antenna?

That's a marginal ground for lightning mitigation. The downlead is
fine, but the rods need to be separated by at least twice their length
to avoid charge saturation of their mutual volumes of soil during a strike.
And you'd like a much more extensive shallow system to conduct the RF
surface currents away from the strike point, IE a set of buried radials
or a Ufer ground would be a big help.

Now a good ground *alone* will not protect your equipment from a strike.
There are other steps which *must* be taken to give you that level of
protection. Foremost of those is to use ground window technique for
your radio room. And you must use proper suppression for any conductors
carrying signals or power to and from your equipment. And layout can
be critically important. For example, never swing the coax overhead
from its support to the radio room. Always bring it completely down

to ground level first, and then bring it over to the radio room. At least the shield should be grounded at the point where you bring it to ground level, and preferrably you'll use the same sort of suppressor at that point that you'll also use at the ground window.

I've posted extensively on lightning mitigation technique over the past several years, consult Dejanews for some of those posts. You *can* ride out direct hits if you do everything just right. But if you do just one thing wrong, your protective efforts can be voided. There is no room for error here.

Lightning mitigation is a very specialized field. There are only a few dozen professionals in the US who are competent to do the job right. Ideally, you'll consult with one of those, but you probably won't because they don't work cheap. You *can* do it yourself, but you need to learn a *lot* of detailed things in order to do it right. A fair start can be the book published by Polyphaser titled "The Grounds for Lightning and EMP Protection". Most of what is in there is accurate and helpful.

A book that is not very helpful is the ARRL Antenna Book, and also the Handbook, which repeats some of what is in the Antenna Book. Some very faulty practices are recomended in both. If you follow their recomendations, you most probably *will* suffer equipment damage in a strike.

>
>Butch KF5DE

Of course you can engineer your system to survive direct hits without any equipment damage. Broadcasters have to do that since they typically take direct strikes in every storm (especially TV and FM broadcasters employing very tall towers). You can employ the same techniques that they use, and achieve the same level of protection. It isn't simple, and it isn't cheap, but it certainly can routinely be done. Any time you suffer lightning damage, that's saying you didn't do the protective measures correctly. The principles are well understood, but you can't make *any* mistakes. There are no shortcuts. A single mistake (and some mistakes aren't obvious) can negate all of your protective measures.

I use a Pro-2045 and it is great for just having on, easy to program, quite sensitive and fast. Make sure you find one with the CTCSS option built in (I think there was a model that didnt have this, but I have seen only the CTCSS ones). If you have a lot of systems using CTCSS in the area it makes a big difference. There is also a lot of room in the case if you want to add additional features to it like a discriminator output, the scanner electronics are quite small compared to the case.

True, if you are Dxing then yes it can be thousands of dollars. For casual or regular use, the $500-1000 range of SW receivers are quite good nowdays. Besides antenna configuration is just as important as the receiver. If the original poster just wants to monitor world events even a small DX-375 will do and it only goes for about $69.99 at RS. The DX-375 while not a luxury liner can pull in all the big ones and it is pretty sensitive, albeit with very poor selectivity, although it is better than the wide range scanners.

>Please understand, there are compromises which have to be made when
>constructing a radio which covers "DC to Light." One of those
>compromises is selectivity and another is dynamic range. Those are
>the very items which most shortwave receivers are optimized for.

True and a perfect reason to own both, but you dont need a R-9000 or a Watkins-Johnson to receive SW well.

Steve.

I agree. Polyphaser's book is very enlightening (no pun intended). Every ham should read their book. It will completely change the way you think about lightning protection and can save your property and maybe your life. Call them. They sent me the book free.

NO! Lightning rods don't prevent lightning strikes. The purpose of the lightning rod is to become the preferred *target* of lightning strikes. Since it is engineered to safely handle the discharge, it protects other structures nearby from being struck by offering itself as the preferred strike target. This has been well understood since Franklin invented the lightning rod some 200 years ago.

There is *no way* to bleed off charge rapidly enough to prevent a strike. Anyone selling methods to do that is selling snake oil. All that you can do is provide an engineered path for the discharge. That's what lightning rods do.

To prevent a strike, you'd need to exchange about 20 coulombs of charge without any discharger exceeding 20 microamps. (If you exceed 20 microamps, the point breaks into streamer formation and becomes a preferred lightning target.) Every few seconds, the storm winds bring another 20 coulombs over your site, so you don't have long to discharge it. That means you would need hundreds of thousands of discharge points, and each has to have its electric field controlled so that it doesn't break into streamer formation. That's not feasible to do in practice. Brush dischargers and "barbed wire" dischargers actually promote lightning strikes, and they usually aren't engineered to safely conduct the 18,000 ampere strike currents to Earth, so they often do more harm than good.

(The idea that you can form a "space charge" around a structure to protect it from strikes is also a myth. Simply consider the storm winds. They'll blow away any such space charge faster than it can be formed.)

A lightning rod is engineered to promote streamer formation (it has a single sharp point which will flow much more than 20 microamps in the presence of lightning potential). And it is engineered to safely conduct the strike current to Earth. Since it is *designed* to be the most heavily streaming object in the area, it becomes the preferred target for strikes. So

other objects in the area, which aren't engineered to tolerate
strike currents, aren't subjected to them.

Well, Ben, I just looked at the past 24 hours and
found 78 threads containing 127 messages having
to do with various aspects of scanning in this group.

I don't know what you consider "all stupid flame", but
I read those messages and didn't find anything
stupid or that resembled a flame.

Now I realize you probably didn't want a serious
answer to your question, but there it is anyway.

Regards,
Dave

Howdy.
I have an Icom Q7A for sale. It was purchased about 1 month ago at HRO in Sunnyvale. It has the Yaesu earpiece, 4 1400Mah batteries, and the MaHa charger. The total price on all this stuff (and the outrageous CA tax) was ~$250. I'd like $175 for it plus $10 to ship it to you COD.

The radio is mint, has box, manual, warranty card, receipt, etc.

Cheers,

Tom Wiggins

I worked for Radio Shack for almost 4 years and yes most of them are Uniden Scanners. The way it works is that a buyer in corporate will order what ever Uniden has the most models off, and then slap on a Radio Shack case. If you ever wonder which scanner you have, open it up...The main processing chip will say the original manufacturer

[snip]

I haven't tried counting good vs flame, but I've noticed that the genuine scanning threads tend to remain straight. That makes it very easy to avoid the junk. Unlike some other groups, where the flame du jour can pop up in any thread at any time.

With a threading news reader at hand (or at finger) this is still a very high content group.

> strike. Anyone selling methods to do that is selling snake oil.

Yeah. At the plant where I work, a vendor was trying to sell a protection system using devices we called "spiny balls" to bleed off charge. We rejected them but a desperate sister plant had them installed. The sister plant was knocked off line by lightning after the installation. The vendor said they needed more spiny balls, which they bought and had installed. Boom, they were knocked off line again by lightning. Then they hardened the system causing the trips and haven't had much trouble since.

The presentation for the spiny balls included a lot of arm waving and voodoo, but the company had an impressive list of allegedly satisfied users including NASA and military installations.

A rival consultant said the spiny ball technique was about as effective as the medeival custom of ringing the church bells to ward off lightning. I suspect that's about right.

By the way there is a schematic for the interface on the VX-1 mods page:

http://www.icongrp.com/~sllewd

The scanner end of the cable is different as the VX-1 uses a 4-conductor
phone plug. The stock ADMS programming cable comes with an adaptor that
converts the 3-pin wiring to 4-pin. What I did was to put a 3.5 to 2.5 mm
adaptor on the ***STOCK*** cable (without the VX-1 adaptor) and it worked
fine.

Hello

Here are some logs made in S.Miguel Island, Azores, about 80NM
North of Santa Maria Island where Santa Maria Oceanic Center is.
With binoculars its possible to see Santa Maria airport approach
lights!
Excellent signals even with the maximum attenuation of the radio
turned on.
Very fine also to try to see some flights flying over my
location...normally to Paramaribo or Cayenne but not always.
Take a look at the airspace radar view when the log was made:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex8.gif

Hope you enjoy the logs and the shot.
Greeting from the center of the Atlantic!

Best regards, Andre Brandao

It's even deeper than this. At 3.5 MHz, the skin depth in "average" ground (5 mS/m conductivity) is about 12.5 feet. I estimate that my clay soil varies from "poor" (2 mS/m) in the summer when it's dry, to "very good" (30 mS/m) when soaking wet in the winter. The skin depths in these soils at 3.5 MHz are 19.7 and 5.1 feet, respectively.

Ken,
Out of 109 threads, 31 were off topic
which, if my calculator is correct, is 28%. That means
72% were on-topic. I don't know how that compares
to other groups, but if the off-topic posts are being
filtered or manually skipped by thread, the numbers
don't mean a thing. I believe the salient point is that there
is plenty of good info here for anyone who wants it.
Best regards,
Dave

Gary, how about a portable lightning rod? Everyone knows lightning never strikes twice in the same spot so you put out the rod, take your one strike and then move the rod to the next location :) Sounds like a good business venture to me and it would be a lot cheaper than the towers and barbed wire some of our Government agencies are buying.

So am I left to just extensive trial and error?

The system has 10 channels. It was one of the first trunked systems installed in the early 80's. They started with 5 channels and a few years later added 5 more, but there is still just one control channel. I have no idea when Motorola introduced type II systems, or if they could have upgraded their system along the way. I know they have thousands of radios in use.

- My assumption is that since I get some of the traffic in default mode (Type II), but not all of it, that it must be a hybrid system. Is that a safe assumption, or will a "type 1 only" system also get picked up by the BC895 in type II mode? How can I tell for sure if it is a hybrid or type 1?

- Is the only way to determine block size to listen to see if I am missing any traffic? I can compare traffic on a conventional 800Mhz scanner so it is easy to tell, but there may be less used fleets or sub fleets that would take forever to determine if I was missing their traffic. Then, if I find out 3 months later that my block sizes were set wrong, all the IDs I had documented would no longer be correct. Is there a better way?

- Also, after listening for a while (I've only had it one day), some blocks never show up. I have seen 0,1,4,6, and 7 but none of the others. Does that indicate anything (like a S-12 type setting that takes up more than one block), or are they just not being used?

...and by the way, Greg, thanks for making this technology available to the public! Did Motorola ever come after you?

I agree with principles you mentioned, except the following:
"This has been well understood since Franklin invented
the lightning rod some 200 years ago."

Well understood??
Not hardly. But aside from that, lightning rods DO prevent
lightning strikes, exactly as you mentioned. They provide
a good (in relation to what they are protecting) discharge
path, thus preventing the strike from hitting the protected
thing (assumedly, your house/building). Instead, the strike
is between the rod and the sky. BUT - your way of
stating this is better than mine. The gist of what you are
saying, as I see it, is that lightning rods cause lightning
strikes to the "preferred target" (ie the rods) rather than
to the thing being protected.

The discharge will occur earlier in the "charge cycle"
from a pointed object than from a blunt object, all other
conditions being equal. Thus lightning rods become the
preferred target, as you mentioned.

Before buying this or something like the ICOM R8500, I would like to hear from people with (preferably) first hand experience using the AOR 5000. Besides a steep learning curve and a somewhat difficult user interface (and relay noise when switching bands/etc), what do you dislike about the unit? Has someone here bought an AOR 5000 only to turn around and sell it and get something else? If so, why? I've got the Dec 1996 Monitoring Times back issue on the way from Grove (contains a review of the 5000)... Any input from owners / users would be appreciated.

Thanks,
Jeff Adams

666. Ohio MARCS Info

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: jpryor@my-dejanews.com
Message-ID: <6q6c0m$7mg$1@nnrp1.dejanews.com>
Source record: 149498

Ohio's Multi-Agency Radio Communications System (MARCS) is an 800 MHz trunked radio and data network that will serve 14 state agencies including Highway Patrol, Natural Resources, Transportation, Administrative Services, Liquor Control, Taxation, Rehabilitation and Correction, Environmental Protection, State Fire Marshall, Emergency Management, Attorney General, Public Utilities Commission, Youth Services and the Ohio Turnpike Commission. MARCS is estimated to cost approximately $175 million and will provide the following benefits for the citizens and for state/local government:

- Central Dispatching (consolidating 57 OSHP dispatching sites into 2 or 3 central sites) - Computer Aided Dispatch - Mobile Data Computers - Automatic Vehicle Locate - Telephone Interconnect - Multi-agency communications during emergencies (including local sheriff and emergency management agencies) - Full portable coverage in major metropolitan areas and at all state prisons - Portable coverage using mobile extenders in rural areas - Spectrum efficiency - Cost-effective system shared by 14 agencies saving tax dollars - Provides a backbone for future expansion (i.e. telephone, data, video) - Digital technology provides for voice and data encryption - State-of-the-art communications for rural agencies at a fraction of the cost of building their own system

The State has contracted with the quality assurance firm of Buford Goff & Associates, Columbia, South Carolina, who is assisting us in the proposal reviews, contract award, and will be overseeing system construction to ensure compliance with contract specifications. Two vendors, Ericsson-GE and TRW-Motorola, are bidding for the project. Contract award was anticipated by mid-1997. Installation should begin early 1998 to be completed by 2002.

The following are frequencies, and their respective locations, which are being used for system testing and development.

I finally have had enough with the false stories that John Mackey has
been spreading around on the newsgroups.

I have not posted on the newsgroup before, I am one of the silent people who
read the scanner newsgroup for information. I contacted OBFD and asked him
what the deal was between cheek and mackey on the news group as I was tired
of Cheek myself, he sent the email below to me.

When I declined and said that I did not want to get involved the nasty emails
started, I had to change my service provider because of it.
And I guess they will start over again once this post is read.

Charles H

Why not use the LM317T RS# 276-1778 $1.99, it is an adjustable voltage regulator.
It is adjutable from 1.2 volts to 27 volts dc and has a 1.5 amp current rating with a heat sink.
Just use a resistor to control the voltage.

I used one in a Icom Ic-2a HT to operate from a cigarette lighter socket, I had an old BP-5 battery pack that was not any good and converted it to an dc adapter to run it off of 12 volts, also I installed an adjustable potentiometer so I could set the voltage to the proper level when the engine was running. You can leave the pot in or read the resistance and install a fixed resistor in it's place.

Hope this helps.

I am not sure what the going price is on the Bearcat - BUT, the bearcat does come with an extra battery pack and a charger. The sale price at radio shack is still a good deal for that kind of a scanner! (someone on this or the other scanning radio newsgroup said that there are cupons at radio shack you can use with this sale?? I think he said it was another $30 off?? I can't remember).

On the plus side - you can walk right on down to radio shack right now and pick up a Pro-90 (beats waiting on mail order).

I have a pro 90 and this thing is GREAT! I would like the convenience of having an extra battery pack (cause if this one goes out, then I have to order one).

It's a great radio!

675. AR8000 interface connectors

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: Zeno.Sloim@milab.se
Message-ID: <6q6mvh$li1$1@nnrp1.dejanews.com>
Source record: 149507

I use my own built interface. I have used a japanese mini-connector HIROSE serial HR10 family:

- HR10A-10R-10P (14.7mm diam. ; 16mm deep ; 10 contacts) mounted inside the AR8000, under the 12V connector.

- HR10A-10P-10P cable connector , assembled on a DB15 cable with a DB25 connector to the other side.

- Hirose protection cover for the connector

I have 10 available contacts:

1,2 = +5V , GND

3,4 = RX , TX

5 = SQuelch

6 = Audio

7,8,9 = baseband signals (NFM ; AM&WFM ; CW&USB&LSB)

It took a little time but it is very compact , elegant and spared ugly holes in the AR8000 case, as I could see on many pages related to AR8000 interfaces. The black anodized aluminium box (sized 8.5cm * 6.5cm * 3.5cm) houses a little board where I mounted the RS232 level converter and a comparator for the baseband signals). Outside are the two DB25 connectors and audio contacts for coupling the audio to an external amp and a little switch to select the baseband sent in the comparator.

678. YAESU FRG-9600 question

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: maxextent@aol.com
Message-ID: <1998080412213800.IAA08355@ladder03.news.aol.com>
Source record: 149510

I have been loaned the following scanner on a try it / buy it basis:

YAESU UHF/VHF Communications Receiver
MODEL# FRG-9600

Range: 60-905 MHZ (continuous)
Modes, 3dB Bandwidth: FM Narrow (15 khz bw)
FM Wide (180 khz bw)
AM Narrow (2.4 khz bw)
AM Wide (6 khz bw)
SSB (2.4 khz bw)

The specifications go on and on....

It also has the optional video output, which permits the connection of
a video monitor.

I have used it for a while now, and it performs very well. I would guess
it was manufactured before 1990. The person that loaned it to me
produced a receipt from 1990, and he purchased it used.

How much is this radio worth? What would a seasoned veteran offer
for this radio? Is $400.00 too much?

Thanks for any and all responses.

max

>
>Can you explain the difference?

Soft solder is the common lead-tin alloy. It is low temperature,
and weak. Hard soldering or brazing is a high temperature process
using a silver or bronze alloy that is strong. That's nearly as good
as true welding. The joint is nearly as strong as the base material.

The idea here is to not create a failure point under the high current
flow of a lightning strike. Soft soldered joints can open under those
currents, brazing and welding won't. (True welding, of course, is
an actual fusion of the base materials, and produces a joint which
is essentially identical to the base material. Steel and aluminum
can be welded, copper needs to be brazed.)

Ooooh, impressive John. Was your mispelling my name just a standard
juvenile act for you, or was it a measure of your stupidity?

>Blake
>said there was a problem with my VE activities & credential, but I am

Just repeated rumors. I heard some more today about you and
a 8 year old girl, but of course, I will attempt to verify them before
I post anything about them, as you are innocent until proven
guilty.

I of course, will verify them closer then you do other people, such
as when your alter ego Clarence Green makes them up.

Again, any of the rumors about you and an 8 year old girl, should
be considered false, until they are verified, and you are convicted
of such a bastardly, cruel, shameful thing.

682. Where to buy scanners in Niagra Falls Canada?

<higher ended radios might>
Ok - I might look into that, or just build one on to my old PRO-2028. I wish
I could modify this one for 800 access, but I am not sure it can be.

<do it yourself!>
That is the truth. However, I just don't want to possibly damage a scanner
and have to buy a new one.

Regards.

>who can't afford...and doesn't even know about a
>soil analysis, his best bet remains to drive a
>1" dia 10-ft copper water pipe as deep into the
>ground as possible.

The problem with that for RF grounding is that the
skin effect of the Earth won't let RF reach down that
deep in most soils. As noted earlier, the skin depth
for clay soil at 3.5 MHz is about 3 feet (and will be
shallower for higher frequencies). Any deeper
than that does nothing as far as RF is concerned.
The skin effect of the Earth won't let RF currents
propagate down there. (Note, dry sandy soil is
the worst case in the other direction, with the skin
depth as much as 15 feet in some cases.)

>I agree with the rest of your post that implies
>the substrate as one plate of the capacitor. But
>since we don't know where the substrate is for a
>hobbyist's situation, we have to deal in matter-of-
>fact rules of thumb and skip a lot of the theory,
>at the risk of being technically incorrect and
>still get the job done, safely and properly.

The grounding conductors form one plate of the
capacitor, and the effective *surface* of the Earth
forms the other. If the "substrate" is deeper than a

skin depth, it is out of the picture as far as RF grounding is concerned. No RF currents can propagate down there.

Now the effective surface is below the physical surface by, on average, 8 to 24 inches (though in dry sandy soil it can be deeper). So shallow burial always works to your advantage. But deep burial doesn't help you for RF grounding since you're below the skin depth and RF currents can't flow down there.

DC grounding is a different matter. DC can't be capacitively coupled. With DC, we are dealing with coupling to a sheet resistance. To minimize the potential drop, the best solution here is to make contact with as much area of the sheet as possible. A Ufer ground does this (a Ufer ground also provides a large capacitance to Earth, so it is a win-win method). Underground water piping (metallic) does this. Buried radials also do a good job of this.

The NEC says that the made electrode (ground rod) is the grounding method of last resort. Any of the other approved grounding methods will be better, and you only resort to rods when you can't do better.

When you do have to resort to rods, several spaced rods (separate them by twice their length) are better than a single deep rod since that gives more contact points to the sheet resistance of Earth.

(In practice, electricians always include a rod in their systems because it makes the electrical inspector happy, not because it provides a better technical ground. The inspector can look at it, check the little box on his form, and go about his business. With other forms of ground, he really needs to perform a dynamic impedance test to determine if it is done properly.)

The NEC says you can lay your grounding conductors parallel with the Earth if they are at a depth below the frost line (2 foot 6 inches in the standard). And that's for grounding DC and AC mains frequencies. For RF grounding, that's a bit deep for upper HF in most soils.

Going deep doesn't buy you anything for RF grounding, since that's always a surface current. And while going deep still helps for DC and AC mains frequency grounding, you'll do better to use several rods rather than one deep one.

Since lightning is a transient with the properties of RF, you'll
always do better providing it with an extensive shallow ground
rather than with a single deep ground. The NEC now recomends
use of a ground ring (that's a buried 2/0 cable completely surrounding
the premises) as a protective ground for lightning. That serves two
purposes. It spreads the surface currents of the strike, and it acts
as a two dimensional Faraday cage for Earth currents from nearby
strikes. (It has more inductance than is desirable, however, and
an extensive Ufer ground still provides a better termination.)

Grumble, grumble. I knew you would ask that :-)

Well, I was surprised to find only continuity on one pin. Then I realized that, though the cable and phone plug were molded, the DB9 was a hand assembled custom job. So I opened it up (screws REAL tight, plastic halves almost feeling glued shut) enough to see a miniature PC board filled with surface mount components.

So I was wrong - my apologies - there IS a level converter in this thingie and it's not just a simple wiring job.

692. HELP: BC895 & Data Slicer

Newsgroup: rec.radio.scanner
Date: 1998-08-04 00:00:00 UTC
From: someone@nospam.net
Message-ID: <35c664eb.0@news.cvc.net>
Source record: 149544

I have been trying to get my BC895 and a Data Slicer to work, but I am not having much luck.

I have tried 3 versions of the "HamCom" interface and I do not get any data displayed with any of them! I have tried various software and that makes no difference either. One of the 3 interfaces (the more sophisticated one) works fine for Amateur Radio Slow Scan TV when hooked to my Kenwood TS-450 rig, but not on the BC895. A technician friend of mine with a "scope" confirms the discriminator tap is correct and has output, so the interface works, and the BC895 works, but not together. I was able to copy data via the soundcard.
I did test the serial cable on pins 4,6,7, and 20 and they are fine. I also tried various settings on the serial port through Win95, but that also did not help.

Has anybody else has this experience? Where should I look from here?

For what it's worth, here is my setup;

BC895

"HamCom" style interface from;
http://web2.airmail.net/lblant1/trunked/trunker/RXLAYOUT.GIF

AMD 486DX4-120 computer

Using Comm Port 2

Many thanks for your help!!

Greg

Hey Peetie Boe! "Coming out" of the forgery
mode, are you? How nice.....

Yes, I have Peetie Laws' e-mail address. Would
you like for me to give it to you so you can
try to get some more "dirt" on me? All you
have to do is ask me nicely.....

But why do you want to know? You were on
the SCAN-L list until Peetie Laws kicked
your ass off a few months ago. Don't you
know how to archive back mail?

You friggin Prozac Bozo.....

Frustrating! I've been considering building one of these myself.
I did remember reading that someone else also had problems. Follow
this link http://web2.airmail.net/lblant1/trunked/trunker/disc2.txt
Don't know if that will help or not but it's better than
nothing!

If you get it figured out, please post the "fix".

Robert

Yes, Smacksie.....my own words IN PART.

But haven't YOU ever been booted off a
forum before?

Ha ha ha ha ha ha ha ha ah!

You imbecilic nitwit.........

Say, what's this I hear about you peddling
ham licenses for twenty bucks a pop? No
shit? You been doing THAT? Whooooooooey,
man, johnny law gonna come down and pop
you in da poopy fer them shennanigans.

You oughta be ashamed of your wretched
self, Smacksie. The boys up north of
here a ways say you even sold your own
Pappy a ham license!!!!!

Shame! Shame! Shame! Shame! Shame! Shame!

You flippin duckbuttered wimp........

My battery pack will no longer hold a charge for very long and I need to replace it. I'm looking for suggestions on the best place to buy.

Does anyone make a battery pack that lasts longer than the standard one?

I believe Uniden makes some of Radio Shacks scanners. Does RS sell a battery pack that will fit this scanner?

Is it OK to leave the AC adapter plugged into the battery pack all the time or will this decrease the battery packs life?

Please reply by E-mail or CC E-mail as I do not read this NG very often.

Thanks

From your departure station in Lorton, Virginia, the frequncy is 160.845. Your arrival station frequncy in Sanford, Florida will be 160.845 as well. In between those two points, I would suggest listening to the road frequencies of the host roads, along with that same frequency.

719. Re: pro-90.. what if my town doesnt use trunked? still good scanner?

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: Ryan Faricy KC0DSZ <jtonsa@nospam.att.net>
Message-ID: <ueplGDOw9GA.186@upnetnews03>
Source record: 149072

The Trunk Tracker is known to still be a rather good conventional scanner. Your town, county, state, or what have you, may be upgrading soon, so it wouldn't hurt to get one.

Listening to trunked systems on a conventional scanner would be hard to follow, since trunked systems usually have different talk groups, and if you set everything up correctly, a Trunk Tracker will only open the squelch when a specific person in a talk group starts transmitting.

(Please jump in, anyone, if something is incorrect here.)

On a conventional scanner, you would hear everything going on (which, like I said, would be hard to follow). EDACS systems are even worse.

> that's about right.<<<<

I think these dissipation arrays DO work. But only to a point. Many summer afternoons I watched four 1,000 foot towers in Miami during thunderstorms. The 3 towers with dissipation arrays rarely got hit. The one with no dissipation system got nailed frequently.

To be fair...when the storms got to the point where the thundercloud was black and directly overhead....every tower got struck. Finally, the remaining tower (Channel 2) got the array and the entertainment value of thunderstorms was reduced.

One thing is for certain...you need a low impedance high current ground connection. This connection must be more attractive to the lightning current than your equipment. And everything must be bonded so things "rise" together in the early milliseconds of the strike. The IR drop will produce voltage across just about everything. Your coax shield could be 10,000 volts above your tower.

It's really important to make the ground connection direct and appealing, and the equipment connection convoluted, inductive and resistive. A direct connection to the electric power company's ground can be a nice destination.
(It may end up going there anyway, better through a 4/0 AWG cable than your equipment)

Looks like the truth is finally coming out about you mackey , I said
your lies were going to catch up with you.
Now there is no way you can deny that you and obfd conspired to
discredit Bill for your own personal vendetta.

You can try and wiggle your way out of it but your not going to be able
to do it , the facts are now out about you.
I just can't believe your personal agenda against Bill.

Well,
lets see:
KA0SSF: 1,429 postings since 4 months ago
Richard Kendrick: 496 since 4 months ago.

The numbers speak for themselves, John.
Who is really abusing others in this newsgroup?

I have found this often true, the more you protest, the guiltier you
appear (and you appear REAL guilty right now).

Hawke

Cross-posted to: alt.engineering.electrical,rec.radio.scanner,rec.radio.amateur.antenna,misc.consumers.house

I have been following the thread posted to
alt.engineering.electrical,rec.radio.scanner,rec.radio.amateur.antenna,misc.
consumers.house.
This post is only to alt.engineering.electrical.

I have been reading all of these posts because I want to know more about
"inductive strikes", a bad term I'm sure. When lightning strikes nearby,
how much power might be generated in my trailer? A lot of current? A high
potential? Should I have a coffee pot plugged in to provide a circuit?
(I'm joking). It would be nice if some one would comment on the current
induced in wiring by nearby lightning strikes.

Bill Maghan

>Hopefully we can get back to discussing radios and
>scanners, and how to use both!

Hi, Bill. Maybe Compuserve doesn't pick up all of
the posts, and I know there are plenty of off-topic
posts here, but the discussion of scanners has never
stopped. I read a number of very helpful posts here
and on a.r.s every day, having to do with all aspects
of scanning. The "good stuff" is still there and always
has been. I'm afraid the "other stuff" is just a by-product
of the good old American way. Step around it, and
enjoy the rest!
Best regards,
Dave

> below

That would be their UNICOM freq. It's one of
the five or six "standards" set aside by the
FAA.

> Outside of designated channels in
> use at large commercial airports, do general
> aviation users just pick any channel that they want,
> and use them?

If two planes want to "chat" they can. Otherwise
you're safer monitoring the freqs being used in
your area. And you just can't pick any freq to
use because it might be used by a local airport,
approach/departure control or ARTCC freq. And
you can't go by publications since they are
usually out of date as soon as they are printed.

I like to monitor those freqs used in the areas in
which I am flying. Near other fields, I listen to
their UNICOM/MULTICOM/CTAF/etc, near controlled
airspace I'll listen to the closest approach freq
for the sector I'm in (if I'm not using them for
VFR flight following) and in the middle of
nowhere, I check up on Flight Watch and perhaps
the ARTCC freq for that sector (who might also be
able to provide flight following if not too busy
and you're at an altitude that gives them a good
radar fix on you).

Hope that's what you were looking for!

But Mackeloon - YOU are the ONE flaming - and posting garbage - constantly.

As was pointed out, your one little addition was nothing but another attempt to CONTROL someone else - when you seem to have NO control over YOURSELF...

WRONG!!! You refused to agree to a simple truce that would have ended the problems YOU cause in this newsgroup - because YOU DON'T WANT IT TO STOP.

Your one little addition (as you like to refer to it) was a blatant attempt to control someone else. Absurd, when you do not seem capable of controlling yourself!!

Nope... YOU got me beat by a mile.

And I note that you did NOT take issue with my statement - that you don't
even know what a scanner IS... Which is a given.

I recommend the Radio Shack PRO-64, which I own, and also the BC-235XLT (I believe the same as PRO 90 -- a trunk tracker). One plus is that the PRO-64 has a pc link which allows you to program frequencies from a text file automatically.

> & try to get stationed at Luke AFB near you! Wouldn't that be
> neat!

You had a thought? ROTFLMAO! Just shows how stupid you are and how little you know of the real world. You would barely be eligible for military duty because you are 33 years old; the maximum age for enlistees is 34. However, as I previously said (which you oh so conveniently snipped) the only

> > reason you would be ineligible for military service would be
> > you never graduated from high school, had at least a GED, or
> > possessed a criminal record (that's coming).

Since you don't have even a GED let alone a high school education, morons like you are ineligible for military service FOOL.

The only way you'll ever get on Luke AFB is during an air show. Rest assured the Air Police would know about you ahead of time.

> BTW- You are not allowed to use an e-mail address of parg so I
> suggest you not do it anymore.

I'm not using 'PARGs' address.

KA0SSF "I'm so cheap, I buy reversible condoms. Even the Asian financial crisis has hit the bathrooms of Portland." <jmackey@parg.org> tried another vain attempt to avoid proving the existence of his degrees:

> The members of this NG never asked him to provide the proof of
> his degrees to you.

True. Like you, Cheek made a public claim about having degrees, and I asked him about that. He readily provided the information. You made a public claim about having a degree, and you've been unable to verify your claims. After nearly three years, it's readily apparent that your have lied about your degrees. Why else would you be unable to provide evidence of your claims? Hmmm?

> The members of this NG asked him to provide the proof to this
> NG as a whole.

Then the members of this group can pursue their own agendas on their own.

764. Re: i'm looking to spend under $200.. what is the best scanner?

765. Kendrick proves Toilet Boy a liar again

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: Richard Kendrick <N7NT@p_arg.org>
Message-ID: <35C903C3.1D2EFCA2@p_arg.org>
Source record: 149209

KA0SSF "Some people say I have a bad personality. That's not true.
I have no personality at all. <jmackey@parg.org> tried to avoid
the truth again:

> Was it YOU doing these forges or was it Cheek?

They weren't forges, Toilet Boy. They were from you. You can't
lie your way out of this one. Check the sequence of all the
Message-IDs on all the headers below. In the one in a trillion
chance you actually didn't make these posts, with your record
for telling the truth, no one will believe you. You've lied for
to long to too many people.

> Plus, what makes you think it was ME? (just morbid
> curiosity -this will be real interesting!)

Yeah, you're a real sick puppy, all right. Your signature
is all over the messages. Any claims that you *didn't*
post these messages makes you a liar, FOOL.

> First - I have never had any children

That's easy to understand. You spend all your time in the bathrooms
of Portland on your knees servicing men. Fortunately for the human
race, it's *very* hard to impregnate your species, even for a
hermaphrodite like you. Although, I've heard there are some reptiles
that are neither male nor female and they can reproduce. You must be
one of those things.

> Second - My sister never had children.

No wonder, she's even uglier than Janet Reno. Are they dating?
Besides, she doesn't need birth control, she has a personality
just like yours. Even Charles Manson wouldn't touch her.

> Third - My sister never died, she is still living in Sioux City.

It's easier to hide her in the basement in the midwest. She's been
in that basement for so long, she's grown bigger than a Buick (visions
of Jabba the Hut come to mind) and you can't get a crane or a fork
lift in there big enough to get her out. Besides, with her eating
habits she needs to be close to plentiful, and cheap, sources of food.
After all, there *are* more dog food factories in the midwest than any
other area of the country. Tell me, does she prefer Kal-Kan or Alpo?

Do you have to pay extra to the city for the industrial sewage
disposal requirements caused by your sister? Or did you stick a 6
inch pvc pipe (is that big enough?) in her butt and hook it directly

into the sewer? What kind of special permits did the EPA require you to obtain? You must have *very* tolerant neighbors. You *do* have neighbors, don't you?

> Fourth - I have never assumed guardianship of ANY children.

The courts wouldn't let you near children. They found out about your little tryst with that child prostitute a while back.

> Fifth - As usual, this was simply another forge as has often been done!

It's not forgery when you post your own messages, Toilet Boy. Although, it could have been one of the voices in your head posting when you weren't looking. You're stupid enough and psychotic enough for that to happen.

Now Toilet Boy, did you really think no one would notice your little forgery? You're such a dolt these days, you must still be taking massive doses of rectally administered prozac. It'll make you even more stupider than you are, you know. I'm only telling these things for your own good.

Do you really think I would need to post a message in my name from AOL? Check the posting NNTP-Posting-Host line in the forged header below and one from one of my genuine posts. The subject of the genuine message is even appropriately named, just for you.

Then you surprise me by admitting the "cleaver" forgery. The subject of the message containing your admission is aptly named. Don't you think? You're still a FOOL, Toilet Boy.

From what I gather Dave, the kids are hers from a previous marriage.
He's never assumed "guardianship". (That would mean "responsibility",
not exactly his strong suit.) Besides, this way he can keep the child
support payments coming in and he can walk away anytime he wants.

That's just the kind of worm he is.

Sure hope she doesn't read this!

I can't believe you wrote that. You want a specific example of your lies.
Well here it is loony boy:

KA0SSF wrote:

> You post more garbage on this NG than anyone with NO on-topic messages!

This is a LIE because of the following FACTS:

No-one in this newsgroup makes as many off-topic posts as YOU on a daily
basis. How many posts did you make today loony boy? And I'm not even
counting your forgeries. It's no big research project. All you have to do
is look at the author lines on the daily traffic and see a) You've got the
most posts and b) none of them are on topic.

You see, YOU LIED WHEN YOU SAID to John T. Arthur:

KA0SSF wrote:

> You post more garbage on this NG than anyone with NO on-topic messages!

You posted 41 messages today. That's the highest number of posts by a
single author today (Of course I'm not even counting your forgeries).

41 messages from you today, loony boy. Who else on the NG posted more than
41 times today? No-one. Not by a long shot.

Not one of those 41 messages is on topic.

So the fact of the matter is JOHN MACKEY POSTS THE MOST GARBAGE! Just count
the posts!

Do you now understand why you're considered a LIAR?

ya LYING friggin' loon.

772. Control software for BC895XLT

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: bigron@i-cafe.net
Message-ID: <MPG.1032afe5e8536797989691@news.interx.net>
Source record: 149216
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have ordered a BC 895XLT and wish to program it via my computer. I've seen different software programs over the Internet that can operate the scanner, for several prices. What I'm looking for is something that I can organize the channels, INCLUDING CTCSS TONES, print a list and program the scanner. I saw at least one program that says they dropped support for CTCSS tones. CTCSS decoding is the main reason I'm getting a new scanner. I find it strange it isn't offered in more scanners, basically the high-end scanners only. I don't plan on using the scanner connected to the computer very much, it will be installed in my car, I just would like to program it initially via computer. I have about 150 channels I want to program in and that will take forever using the keys on the front and if I want to rearrange the channels, that too will take forever. Also, why are all the commercially made connection cables so damn expensive? I can make one from parts at Radio Shack for MUCH cheaper. The cheapest I've seen was about $25!

I think there's a little hole on the left side of the scanner that you use a paper clip to depress something to reset clear the memory banks. That's the way it works on the Pro-39, it might be the same set-up for the Pro-43.

That's fine - put me on your filter. That's your problem. It doesn't hurt me at all.

You aren't open to people's opinions? Be closed-minded, again, that's your problem. I can't believe you're even taking sides with this psychotic "Jack" guy. He just pounces at every little mistake I make (even when I apologize, he criticizes me for being a fool) and tries to degrade me in front of public view, but I don't care all that much anymore -- I am used to it.

Don't believe me? I can post proof of how asinine his behavior is.

... and you're just another one of him. The material I post is fully relevant, and I don't call my retort and defense a "crap post". I have the right to a defense when Mr. Jack feels he can act stupid.

You probably should create a scanner thread
for that question. This thread is one that
a lot of people will overlook since it doesn't
have anything to do with scanners.

778. Re: ICOM Q7 good or bad Scanner?

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: "alf.sauve" <alf.sauve@mindspring.com>
Message-ID: <3s%x1.1244$4r2.553692@news.mci2000.com>
Source record: 149222

The Q7 isn't an exceptional scanner. A lot depends on what you want. If it's fast scanning speed, lots of bank options then no, the Q7 isn't it. But if you want very small size with 30-1,300 coverage and AA batteries (instead of special batteries) then that's what the Q7 is about. If you want smaller size, don't need 30-76Mhz and don't mind special batteries then the Yeasu VX-1 is the ticket. Neither are great scanners. Very few buttons and lots of two fingered sequences. But the ticket is small size. I take it on trips where I wouldn't have taken my full size scanner. So easy to pull out and use.

If you don't need the transmitter ICOM is supposedly coming out with a receive only version that will probably have some more features but be in the same form factor.

Exactly. I've just been hanging out here since November, when I bought my first scanner, and my scanning interests are modest. But this group has taught me a tremendous amount. My own contribution to scanning (a PRO-64 upload program) is a direct result of the generous help that I got from folks here.

I've known Bill a lot longer than YOU have, Mackeloon - and I've NEVER known him to tell a lie. You, on the other hand, I've never known to tell the truth.

And how about some evidence of your alleged degree(s) that you OFFERED to post?

Is the indoor Skyscan desktop Scanmaster antenna any good? I'm especially
interested in the VHF low-band and FM-TV DX. How does it compare with
the telescopic whips on the market (Watson, RadioShack, etc.) I have the
Watson Super Gainer and also a coax antenna from C. Crane.
They're allright on UHF but not VHF low ham band or FM.
The only source of the Skyscan I could find was in the U.K.
Are there any local distributors for US mail order? Also,
if this is no good for 30-108 mhz, are there any indoor whips that do well
other than the 20-006 (I'm trying to avoid RadioShack as
we've had poor results with their stuff). I can no longer find
the Grove ANT-8 or ANT-19 which were good in this range.

This is for Brigham Young University in Provo Utah. I have checked all the TrunkTracker sites that I could find and no one has anything but frequencies (no fleetmaps/IDs).

Since their usage is so diverse it is difficult to guess the block sizes.

An unrelated question, I was listening to their police units and they changed channels to a car-car channel and I lost their traffic - even on a conventional scanner with all the repeater freqs. Can some radios go simplex and not use the repeaters?

John, thanks for the info. Do you know how long the "B" version has
been out for? I'll ask my dealer, but, I'm always interested in
independent confirmation of info. I've heard the complaint about the
squelch, and this could be a real drag... Anyone out there have a
really new 5000 that could comment on the squelch tail issue? Thanks

>I just got a new sony scanner as a gift. Is it worth keeping? And are
>there any good mods available?

The SC1PC is certainly worth keeping. See my review
in August 1998 Monitoring Times magazine.

From the FAQ:

SONY |

SC1PC: 1998 vintage. Good RF and audio performance. Covers |
25 - 1300 MHz, minus cellular phone. Selectable step size |
and mode. Computer control and downloading with software |
and PC cable provided. Powered by ordinary AA batteries. |
Provided CDROM includes both the scanner control program and |
the multi million record PerCon FCC license database. 10 |
banks ("pages" in SONY parlance) of 30 channels each. Per- |
channel 2 second rescan delay. Unlike the ICOM IC-R10, you |
can scan any combination of memory banks. You can lock out |
("skip") memory channels from scanning. The frequency |
stored in a skipped channel will also be skipped during |
searches. One priority channel checked every 5 seconds. |
SONY's limit search is restricted to one pair of search |
limits, though computer control expands this to 20 linkable |
pairs. Band search lets you search through 17 bands |
programmed at the factory. Service search. A cache, termed |
Intelligent Memory, stores the last 10 unique frequencies |
that were active for longer than 5 seconds each. See "The |
SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, |
August 1998, for a review which includes quantitative test |
results. |

Actually, there's PLENTY of good scanner info in this newsgroup - once you learn to step around the doggy-doo dropped everywhere by Mackey and Friends.

If you have a question, ask it - and you'll get answers. Pronto!

But if you only complain about things, you only make it worse by wasting even more bandwidth...

Robyn,

There is another scanner newsgroup, known as alt.radio.scanner.
It really is no different than this one, though, in that it is also
unmoderated and open to all and sundry.

I understand the point you're making, but I would take
issue with your contention that there is no useful
information here. I'm sure it wasn't your intent, but by
making that statement you slam the many people who
post useful information here every day.

There are many knowledgable people here, and most are
more than willing to answer questions and share their
experience. Sure, you have skirt a few cow pies here and
there to get to it, but that's the American way.

Best regards,

Dave

Source record: 149290

Jeff,

Other than the relay clicking that you've already mentioned, and the relatively difficult user interface, the other problem (at least in my mind) with the AR-5000 is a noticable and objectionable squelch tail when in NFM mode. At least this was the case with the early units. I haven't had a chance to play with a B model, so perhaps this was addressed in the upgrade.

Comparing the two, I found the AOR to be the better VHF/UHF scanner, and the ICOM to be the better HF shortwave receiver.

>From: dalyrimple@poundhouse.com (John Petri)

>Because it flies in the face of your _constant_ upbraiding of others for doing the same thing! Surely you see this!

"Constant upbraiding?" That's a gross exaggeration and you know it. I don't have a barometer of on- to off-topic posts that I consider acceptable. Maybe you do. My only expectation is that if you post more on than off, that's fine with me. If one never posts on-topic, then one really doesn't have a right to complain about anything. Indeed, this is a person who is part of the problem.

Take Mackey for instance. He has posted 1000s of off-topic messages, and perhaps 4-5 on (I don't know the exact number but it is miniscule in comparison). Clearly, his agenda is something other than contributing to this group. What's more, he's willing to do this at the expense of everyone else. He simply doesn't give a damn about anything but making a spectacle of himself.

870. BCT-10 Manual needed

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: Brian Trotter <btrotter@NOSPAMearthlink.net>
Message-ID: <35C86921.F087BA57@NOSPAMearthlink.net>
Source record: 149314

If anyone has a copy of the Uniden BCT-10 Beartracker scanner in data format. Scanned into a text file, or document, or an image file, would you mind please sending me a copy. If it is stored anywhere, I could download it.

Also, I am needing a few extras for mine, so if anyone has them, contact

me with your price. I am in need of the window suction mount, and an extended antennae. I would like to run the antennae to a different part of the car for better reception.

In order to reply, remove the NOSPAM from my email address.

Thanks,
Brian

Howdy.
The Q7A had been sold.

By the way, it seems to be nearly impossible to cancel a message via this service. I'm a computer tech, I carefully wrote down the cancel ID and page, and have still been going through hell (and finally gave up). Deja News seems to have made this as difficult as possible and I won't be using this portal in the future!

I suggest others use alternative methods to post.

Tom

p.s. I tried emailing a query about this a month ago, but never had a reply from Dejanews...bad indicator for the company.

881. Later BC-200XLT Cell Mod?

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: leigh@rain.org
Message-ID: <6q8d5k$d21$1@news.rain.org>
Source record: 149330

I recently bought a used BC-200XLT scanner. It's the later version with the UC-1147A microprocessor. I understand the cell mod for the later version is different, and I found the following mod:

>The newer Bearcat 200XLT modification involves ADDING any 2.2K through
>10K ohm 1/8 or 1/4 (1/8 works better cause its smaller) resistor
>between pin 8 the K1019 IC and the LEFT side of the 10K resistor that
>is right above the UNIDEN UC-1147A microprocessor.

Problem: I can find the 10K resistor mentioned, but I can't find the K1019 IC. (But it does have two K1013 ICs.) Where is K1019?

Thanks in advance. --Leigh Marrin/KM6JE in Santa Barbara, Calif.

882. Re: Grounding Rod Advice Needed....

Newsgroup: rec.radio.scanner
Date: 1998-08-05 00:00:00 UTC
From: affordNOSPAM@execpc.com
Message-ID: <6q8dtp$9f@newsops.execpc.com>
Source record: 149331
Cross-posted to: alt.engineering.electrical,rec.radio.scanner,rec.radio.amateur.antenna,misc.consumers.house

NEC Article 250-113 states: "Grounding conductors and bonding jumpers shall be connected by exothermic welding, listed pressure connectors, listed clamps, or other listed means. Connection devices or fittings that depend solely on solder shall not be used. Sheet metal screws shall not be used to connect grounding conductors to enclosures." The last statement applies to boxes where installers were not using green 10-32 screws for grounding. Caddy Fasteners (Erico) makes exothermic welding systems that are approved for this purpose. Burndy makes listed pressure connections, but the tools are expensive (>$1,500.00). Since Welding, brazing, soldering, silver soldering, & hard soldering are not listed means of connection, they cannot legally be used.

Article 250-83(c)(3) states:The electrode shall be installed such that at least 8 ft of length is in contact with the soil. It shall be driven to a depth not less than 8 ft except that, where rock bottom is encountered, the electrode shall be driven at an oblique angle not to exceed 45 degrees from vertical or shall be buried in a trench that is at least 2 1/2 ft deep. The upper end of the electrode shall be flush with or below ground level unless the above ground end and the grounding electrode conductor attachment are protected against physical damage as specified in section 250-117.

The NEC does not make any recommendation that I could find on the use of ground rings for lightning protection. The NEC is not a design manual, only a legal bare minimum for protection of life and property. I suspect that the recommendation may have appeared in another technical venue.

These standards apply to the grounding of: electrical systems, communication circuits, radio & TV equipment & cable TV systems.

Once the legal minimums have been met, you should be free to do additional specialized grounding to meet unique needs. Burying a ground rod or plate electrode or ground ring close to the surface to protect against lightning or HF shouldn't pose a legal problem, but, bonding all of the various grounding electrodes is recommended (not mandatory) per NEC Article 250-86 FPN No. 2.

This has been an interesting and enLIGHTNING thread. Keep em coming!

Regards,

John R. Grau, a Master Electrician in Wisconsin

You are a little confused, the discriminator output is little more
then an unfiltered audio output, where the data slicer is a circuit
that brings up the signal to rs-232 levels.
Good luck, it's a very easy and rewarding project that cost's less
then $6

> 2 years ago my sister died & I assumed guardianship of her 2 children.

First - I have never had any children
Second - My sister never had children.
Third - My sister never died, she is still living in Sioux City.
Fourth - I have never assumed guardianship of ANY children.
Fifth - As usual, this was simply another forge as has often been done!

Has anyone actually tried using a scanner while airborn? I once used a cheap radio shack reciever (anaol) and could only hear my own plane.

Guess Who Is Listening?

BACKGROUND

We have now entered the information age and with that entrance we have discovered a new set of issues and challenges. One of these issues is the dramatic increase in the value of sensitive information, which has created a new industry called information security.

The importance of this issue is best illustrated in the recent congressional hearings in February 1996, where it was estimated that US businesses would lose nearly $100 billion dollars per year from foreign espionage. We are clearly in a technology war where people daily are trying to uncover sensitive information about celebrities, competitors, and governments. We have entered an era full of special intrigue as new technology weapons are used to gather confidential information. The gadgets of the James Bond movies are no longer available only on celluloid.

The public, however, is still not fully aware of the level of the problem regarding information security. The House Telecommunications Committee held hearings in February 1997 to review the security problems of cellular communications. This is a serious problem facing the public and business today. If you do not believe it, just ask House Speaker Newt Gingrich, Senator Robb, President Carter or the Prince of Wales.

The problem of cellular security is not limited to just celebrities. It effects people everyday in their work and personal lives. Salespeople lose leads to competitors, lawyers lose attorney client-privileged information, and doctor's information on patient medical records is leaked. In addition, investment bankers and business leaders fear SEC violations via

interception of sensitive SEC restricted information.

The problem is more widespread than most people believe. This is illustrated by a recent event in Canada where two people wanted to discover if people were actually monitoring cellular calls in Calgary, Alberta. The two individuals used a fabricated story, which they discussed on a cellular phone. They stated that a local radio station would be giving a prize to the first person to call the station the next morning. The radio station had nine calls the following morning all claiming the prize. This story certainly makes you wonder who is listening to your conversations.

SECURITY NEEDS TODAY

Today, security is a necessity in many different communication fields, such as cellular, landline phones, land mobile radios and data security for computers, computer networks, Internet, and electronic commerce. Analog cellular communications has a serious security problem as inexpensive analog scanners are used by millions of people daily, with many people illegally monitoring and divulging sensitive information.

Today's Communication Security Risk
Security Risk
Communication Device High Medium Low
Telephony
Cellular
Analog X
Digital X
PCS
Digital X
Landline Phones
International X
Long Distance MicroWave X
Faxes X
Voice Mail X
Land Mobile Radio
Analog X
Digital-APCO-25 X
Digital-APCO-25/DES X
Data
Computers X
Internet X
Electronic Commerce X

DIGITAL SECURITY MYTH

Today, some people believe the move from analog to digital transmissions will in itself solve the security problem. Some digital cellular or PCS carriers have claimed their equipment is secure just by the virtue of it being digital. Digital transmissions are no more secure than analog unless some type of encryption is used on the audio signal. Currently equipment that can be used for receiving digital cellular calls is costly and in limited supply. As digital moves from its infancy, this equipment will be

come less costly and readily available. Once again, leaving the user without security.

Some digital products have encryption, which will prevent unauthorized interception of communications. These products, such as the new APCO 25 digital radios have DES security optionally built into the unit. Many people in the know believe that more digital products will continue to be manufactured with encryption, which will alleviate the problems we are currently facing. Don't get caught in the digital security myth, remember digital transmission without encryption is not secure and the current lack of affordable scanners does not assure security.

THREE LEVELS OF INFORMATION PIRATES

Security experts divide information pirates into three groups:

1. The hobbyist, who is a casual eavesdropper with armed with a low cost analog scanner. Hobbyist's listen to scanners daily to learn of good gossip and interesting events. This tends to be a low cost form of entertainment. They want to know the scoop on who is doing what to whom, when, where and why. They listen to police and fire calls as well as cellular calls. Hobbyist's scan the airwaves for hot information and then perhaps tape a "good one" and share it with other hobbyist's or members of a local scanner club. The hobbyists are sometimes police or fire buffs, retired people, or simply the curious.

2. The next levels of security pirates are called the "Techies." These people may be the so-called computer hacker or other electronic buff that possesses technical knowledge and more sophisticated equipment. These people intercept the transmission of a targeted individual. These types of pirates are generally very private and very motivated, often just by the thrill of accomplishment.

3. The final level of security pirates is the "Specialist." These individuals have a complete range of equipment, running the gamut from analog to digital scanners plus sophisticated electronic surveillance equipment. These people have no alliances and usually contract their services to the highest bidder, whether a hostile foreign government, organized crime or a business competitor. These people are very serious threats and perform very targeted operations. Recent movies, such as "Sneakers" illustrate the capabilities, intelligence, strategies, and ingenuity of the "Specialist."

Profile of Information Pirate

Level I Level II Level III

Targeted Targeted Random

Profile Hobbyist, Techie, Hacker Governmental, Corporate,
Media and Criminal Espionage

Analog Scanner, Digital Analog Scanner, Digital
Equipment Analog Scanner, High Speed Scanner, High Speed
Scanner Computer, Wiretap,
Computer, Modem
Electronic Surveillance
Economic information,
Motivation Gossip, Technology feat, National security
News Economic information
information, Police

INFORMATION SECURITY PRODUCTS

Several important technologies and products have been developed to fight the unauthorized interception of communications. These products use both analog scrambling and digital encryption technologies to actually hide the communication. Other technologies such as authentication cards and firewalls are also in use, but they only attempt to block access. One first needs to access the level of security that is required to protect their information. Security levels begin with locks and keys and end with encryption or scrambling of information.

SUMMARY

Today, companies have developed products that provide security to cellular, landline, computer networks, electronic commerce, and the Internet.

One of the early leaders in this market was Transcrypt International Inc.(NASDAQ:TRII) They became the first company to develop a cellular security product as a result of the San Francisco earthquake. In this disaster, public safety officials were forced to use cellular phones, but the transmissions were intercepted and broadcast by the media. Transcrypt, as a result, developed a product based on their Crypto Plus(security technology that has been in use by public safety officials for over 10 years in their land mobile radios. Transcrypt first began developing products to meet the needs of police and governments throughout the world starting with land mobile radio in 1978. The company now has customers in 108 countries and list many prestigious customers such as the German National Police, Scotland Yard, Hong Kong Police and federal and public safety customers in all 50 states.

Transcrypt's vision is to provide customers with a total secure office. Therefore, all cellular, landline, computers, and electronic commerce transactions can be secured. The company believes this will meet the needs of companies and governments that have highly valuable information.

The world of James Bond has now become a reality for leading governments and corporations worldwide who need to fully protect their intellectual property and private communications.

> > which Peetie Laws and his green weenie
> > boys didn't like. So what?
>
> You could have but that feature off but you didn't.

Noooo, and I won't, either. Not on a bet!

> (You could have even used different software)

Wellllllll...."could" is a stupid word. I
WON'T use anything but Outlook 98. If folks
don't like it, they can eat my shorts. Tough.

> But you decided to continue to use the RRQ feature

No dungbreath, I didn't "decide" any such. Once
I implemented it last year, that was that. It
was implemented to stay.
```

> trying to use the thin excuse that it was a part of
> your server.

Good grief, are you ever stupid. I said then and
I say now....I use RRQ's as a management tool.
No, RRQ's are NOT a part of my server. Why? Did
Peetie Blowhard Boe blow that one up your cavernous
poopy?

> But others saw thru your lies & held you accountable.

No lies to it, fecesbreath. And no accountability,
either. I do what I do and others are free to take
it or leave it.....and there is always a standing
invitation to eat my shorts.

> RRQ's are considered poor etiquite on mail lists

Just by green weenies and idiots who don't know
any better how to deal with them.

> You wanted to use it to know when people were online & what
> address/system they were using. A clear cut violation of the
> terms of use for that system.

RRQ's where NOT a "Terms of Use" for that system.
And RRQ's are not for finding out who is on line and
about their "address/systems".....you're grasping
at straws because you're so wretchedly stupid.

> I've got the postcard you sent me 2 years ago, remember?
> (would you like me to post the scanned image if it again?)

Sure, go ahead. Post anything you want, Dingleberry.

> Lets see, how many different Fido echos were you booted from
> or not allowed onto?

Booted from one.

> How many e-mail lists were you booted from or not allowed onto?

One.

But YOU? You're not even allowed IN Fido
anymore, period. And no mail list would have
the likes of you.

You friggin nincompoop.......

Thank goodness I disconnect my equipment when I am away from the
radio's! We had a HUGE storm today while I was away in which my tree
mounted discone was hit according to my neighbor anyway! He told me
that lightning hit the top of my tree and split into 2 and went to the
ground! I'm assuming it came down the two downleads to the ground
rods. It was dark when I learned this so I can't inspect the antenna
now, which still functions normally, but the ground rod connections
didn't show any signs of damage..I'll know more when I get to the top
of the tree. Anyway, thanks for the excellent advice..looks like I've
got a lot of reading to do!

Lightning rods aren't the perfect "preferred target" for a lightning discharge (I know that nobody said they were ;-)

Some of the issues with Franklin rods include ...

* Excessive corona buildup, which impedes the progress of the upward streamer

* Premature or uncontrolled streamer initiation , i.e.: due to the rod's sharp pointy shape - a streamer can be initiated while the background electrostatic field is below the streamer propagation level of 250-300kV/m

This accounts for the number of strikes that have bypassed a Franklin rod - to strike the corner of a building or a Microwave antenna.

Our company has worked in this field for over 20 years and have produced a successful range of Early Streamer Emission terminals. Consider them to be an enhanced Franklin rod that has successfully overcome the above limitations. Coupled with a downconductor that contains all of the lightning current, it has been a proven system in Australia and S-E Asia over the last 10-15 years.

If you'd like a copy of some of the technical papers that support these claims, please send me an Email. One of the papers is a statistical analysis of 65 terminals , installed over the last 10 years in Hong Kong with > 400 strikes with NO bypasses.

Thanks for your time <disconnect plug mode>

I can't help with the U.S. price but I can relay a published used value for Canada that gives a ballpark reference for U.S. pricing. The 1998 Haruteq frequency Guide for Ontario, Canada has a list of current used scanner prices.

According to the book, the scanner you listed sold new in 1986 in Canada for a list price of $899.00. It's used value is listed as $200.00-250.00 Canadian dollars. So, $400.00 U.S. would seem a bit steep.

>

Even with a Type I system if you have set the scanner to Type II
(default mode) you will still be able to track some of the traffic
some of the time. This is due to the fact that responses occurring
within a couple of seconds or so of the last PTT release don't change
channels on most systems.

As far as what you see on the scanner display is concerned; If you are
looking at a Type I system through the lens of a Type II fleet map the
radio is just translating Type I IDs to what looks like Type II IDs
The same is true in reverse if you are looking at a Type II system
with a Type I fleet map. So the fact that you are seeing stuff doesn't
really mean a whole lot.

>- Is the only way to determine block size to listen to see if I am missing

>that indicate anything (like a S-12 type setting that takes up more than one
>block), or are they just not being used?
>

If you have the fleet map set up in the default mode then there's just
no activity in those blocks. If you have some blocks set as Type I
then the reason may well be due to the size code you have selected.
You can check this by stepping through all the blocks and noting the
assigned size code.

This is a section from the TrunkTrac manual which describes a method
for determining fleet maps. It should work for the Trunktrackers too.

With TrunkTrac you can turn off individual blocks so that you don't
even see IDs in the block's range. You can't do that with the
Trunktrackers. Instead leave those blocks set to S0 and just ignore
the resultant Type II IDs you see.

You can tell which block a particular Type II ID came from by dividing
it by 8192 and discarding the fractional part. For example, if you see
the ID 12555 you would suspect that it is not a Type II ID since it's
odd. To determine which block it came from divide 12555 by 8192
obtaining 1.533. Discard the fractional part to obtain 1 which is the
block in question. If you have a fair number of IDs like that from
block 1 you can assume the block is not really a Type II block as you
have it set.

SIZE-CODE DETERMINATION FOR UNKNOWN FLEET MAPS

--

If you don't know the Fleet Map for a Type I or Hybrid system you'll
have to somehow figure it out the size-code assignments yourself.

Details concerning how size-codes are selected by the builders of a
particular Type I system are highly dependent on the specific needs of
the users of the system. Some organizations will want many subfleets
but have only a few radios, others may have lots of radios, but need
only a few subfleets. In any case, you will want to program TrunkTrac
with the same size-code assignments as the trunked system. If you can
do this you'll be able to accurately track all the fleet-subfleets
combinations extant on the system. Unless you already know these
size-codes however, you'll have to guess at them. This isn't as hard
as it seems: you only need to figure out one block at a time, then
when you are confident it's correct, you can work on the next one,
until they're all done. The process is fairly simple if you take a
systematic approach to the problem.

First, set all blocks to a size-code of S0. Turn all the blocks off.
Then turn one block at a time on and note whether the IDs you see
during program operation are predominately even or a mix of even and
odd. If the IDs are even, then the block should most likely keep the
S0 size-code assignment making it a Type II block. If the IDs show a

fairly equal mix of even and odd numbers, then the block is most likely a Type I block and you'll have to determine what size-code to assign to it.

For most public safety systems there are a few size code which are used more often than most; S3 and S4 are probably the most common, followed by S10, S11, and S12. What you should do is first program block 0 with a likely size code. Turn off the remaining blocks. Listen to TrunkTrac with Delay on. After listening for some time, decide if you are hearing most of the replies to the conversations you hear. If you are able to track conversations consistently, you have probably selected the right size-code If not, try a different size-code and repeat until you have found the right one. Do this, until you've programmed all the blocks.

As an aid to determining the correct size-code for Type I blocks some additional understanding of size-codes and what they really mean may be helpful.

When a block is assigned a size code, the resultant fleet(s) created within that block are given a designation dependent on the block number, and size code. For example; if you assign block 1 a size code of S10, you create within the block, (see the size-code chart) four fleets. These would be numbered 100, 101, 102, and 103. If you also assign block 3 the S10 size code, you'll get fleets 300, 301, 302, and 303. The leftmost digit represents the block, while the remaining digits designate which fleet within the block is being referred to. Nevertheless, the nomenclature is such that whenever the term fleet is used, it refers to all three digits. In general, the size-code determines the number of subfleets, and the number of total individual IDs that can be accommodated within them, as well as the total number of fleets contained within a block. A size code of S1 for instance, creates a block with 128 fleets. Each fleet contains 4 subfleets, and provides 16 individual IDs for each fleet. A block assigned a size code of S4 on the other hand, can contain only a single fleet. However, this is a large fleet; it has 16 subfleets and 512 individual IDs. Some fleets are so large they span two, four, or all eight blocks. The size-code chart shows these details for all 14 size codes.

If you have some idea of the function and size of a group of users on the trunked system you can make an intelligent guess regarding which size-codes might be reasonable to apply to that group of users. For most public safety systems there are a few size code which are used more often than most; S3 and S4 are probably the most common, followed by S10, S11, and S12. If you are trying to program the Fleet Map for a commercial SMR or business trunked system you should try Preset Fleet Map 8 first, as this is a commonly applied Fleet Map for these systems.

It's an image of a strong cellular signal. Had me fooled for a while
too. If you have a scanner which receives 900MHz you would be able
to find the 'proper' transmission

I was seriously considering purchasing a PCR1000, but this whole situation with Icom has turned me off from buying anything from them. I appreciate "call me and I'll listen" but I would prefer Mr. Lougee and Icom confront these issues to the hobbyist community at large.

Try the $320 (US Dollars) Sony Computer controlled handheld Scanner it
recieves everything (unsure about Military Air) you want and has 300
channels.

If you are in a metro area like Montreal, Toronto or Vancouver I might want
to go for more channels 500-1000 but thats up to you because the price
goes way up 400-500 US

>Actually, I'd like to know what "NiteLogger" is.

The BMI NiteLogger II connects between your radio's external
speaker jack and mic input and control jacks of a tape recorder.

It activates the recorder when there's sound coming from
your radio.

I tested the BMI NiteLogger II and published a review in
Aug 96 Monitoring Times magazine.
IMHO, it is an impressive product. Since no schematic was furnished
with the NiteLogger II, I "reverse engineered" and analyzed
the circuitry of the one I borrowed and published a complete
schematic in MT.

Grove Enterprises also sells the Nitelogger II. I don't know
which dealer has the best price.

btdunit@aol.com (Btdunit) asked:
> What is the legality of listening to cordless and cellular telephone
> conversations?

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a short dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

941. Re: TrunkTracker: How to find fleet info?

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <O0czngaw9GA.214@nih2naab.prod2.compuserve.com>
Source record: 148841

To add to what Greg has posted, you can improve the odds over just guessing each block's size code. If you log a fair number of IDs for a block while in Type II mode, you can sort them in ascending order, convert them to binary and look for patterns. Typically, you would see the low order digits counting up, then suddenly start over at a low value. This would indicate the start of a new fleet/subfleet. Inspection of the high order bits at this point can give an indication of which bits constitute the fleet and which the subfleet.

The TrunkTracker resolves a two-byte (16-bit) number to form the displayed ID. If it has been told that the system is a Type II or the particular block is size code S-0, it will assume the entire number is a talk group and simply display the decimal equivilent of the number. Type II talk groups typically begin at 16 and go up in increments of 32. If almost all of the IDs in a block satisfy the formula 32*n+16, then it's a Type II block. The occasional odd entry is a variant of the next lowest regular group. The binary breakdown of a Type II ID would be:
gggggggggg10000
--group-- flags

If the TT has been instructed that a block is Type I, it will break the sixteen bits into block/fleet/subfleet/unit. The first three bits are the block (0 - 7 in decimal), while the size of the fleet and subfleet fields vary with the size code. The remaining bits are the ID of the individual user, and are not displayed in Type I mode. The 16 bits would break out as:
bbb ff..ff ss..ss uu..uu
blk fleet subflt unit

You can look at the Fleet Map Size Code chart in the TT manual and see the various numbers as powers of two. The corresponding 16-bit patterns for each size code are:

S1 bbb fffffff ss uuuu S8 bbb ffff ss uuuuuuu
S2 bbb ffff sss uuuuuu S9 bbb fff ss uuuuuuuu
S3 bbb fff sss uuuuuuu S10 bbb ff sss uuuuuuuu
S4 bbb ssss uuuuuuuuu S11 bbb f ssss uuuuuuuu
S5 bbb ffffff ss uuuuu S12 bb ssss uuuuuuuuuu } multi-
S6 bbb fffff sss uuuuu S13 b ssss uuuuuuuuuuu } block
S7 bbb fffff ss uuuuuu S14 ssss uuuuuuuuuuuu } sizes

With sufficient IDs (captured in Type II mode) for a block, you can look at the binary equivilents and often detect a pattern in the bits coresponding to one of the size codes. While you might not be able to decide if the fleet is three or four bits long, you could rule out all the other possibilities.

To assist in this, the following simple Basic program will take a file of Type II IDs, with descriptions if available (i.e. 'Fire Dispatch'), and print a listing of the binary equivilents. The first five characters of each line in the file contain an ID, with free-form comments beginning in the seventh byte. The file, called "fleetids", must be sorted in ascending order.

```
10 DEFINT A-Z : OLDBLK=-1 : OPEN "I", 1, "fleetids"
20 LPRINT TAB(7) "Decimal Blk Flt/Sub/Unit" : LPRINT
30 IF EOF(1) THEN END
40 LINE INPUT# 1, X$ : ID!=VAL(LEFT$(X$,5)) : BLK=INT(ID!/8192)
50 IF BLK<>OLDBLK THEN OLDBLK=BLK : LPRINT "Block " BLK
60 LPRINT TAB(8) USING "###### "; ID!;
70 GOSUB 100
80 LPRINT LEFT$(B$,3)+" "+RIGHT$(B$,13)+" "+MID$(X$,7,40)
90 GOTO 30
99 '
100 ' Convert to Binary
110 B$=""
120 FOR I = 1 TO 4 : X=ID!-16*INT(ID!/16) : Y=X
130 FOR J = 1 TO 4 : B$=CHR$(Y-2*INT(Y/2)+48)+B$ : Y=INT(Y/2) : NEXT J
150 ID!=INT(ID!/16) : NEXT I : RETURN
199 '
```

The resulting printout lists the decimal ID, the 16-bit binary, and any comments. A series of entries marked as Police, followed by a number of Fire department entries, would indicate the break between fleets or subfleets. A corresponding change in the bit pattern at this point should give you a clue as to structure of the size code for this block.

A few notes -
The BC895 coupled with a computer control program should be able to generate a useful list of IDs in a few hours.
It would help to keep a hit count for the various IDs. The TT occasionally misreads the control channel, particularly if the signal is weak. An ID that only shows up once may be an error. This should be kept in mind when looking at the printout.

Analyzing the ID patterns still requires some educated guessing, but it is still better than blindly trying each possible size code for every block. In determining the maps for the various trunks in the Atlanta region, I was able to identify 50-75% of the active blocks on the first pass. Of course, the Atlanta area trunks are all preset in the TT - thanks Greg <g>.

Yes, just one- DONT! At least not yet. Rick Wells' site has quite
an extensive list of problems that have plagued the US version of this
handheld. His url is:

Mike, I'm not sure what frequency range ATC is in, but the frequency range (in MHz)of my 210xlt (I hope they aren't two different models) is as follows:
29-29.7 10M amateur
29.7-50 low band
50-54 6M amateur
118-136 acft
136-144 Mil land mobile
144-148 2M amateur
148-174 High band
406-420 Fed Gov't Mobile
420-450 3/4M amateur
450-470 UHF band
470-512 "T" band
Hope this helps, Art.

Hello:

(If someone has a better model to recommend, please jump in. I am only quoting what I know about the two models that I've used.)

Not many lower-end handhelds have military-receive capability, however, if you're willing to buy a higher-end model, you could try an AOR, Icom, or Alinco. Unfortunately, these are usually $350-$600 US (well over what you want to spend).

If you're willing to drop military receive, you can get many models for what you want to listen to. Some models in [my] mind are the BC-235 XLT/Pro 90 (trunk trackers), the PRO-64 (I own and am very happy with the 64). I am pretty tied to Radio Shack's scanners -- I really haven't owned any others except for two Unidens.

The PRO-64 has a NiCD battery life of about 18+ hours continously unsquelched at full volume. With alkalines, about 20 hours. I would bet the Uniden is about the same, but they are made by different companies (GRE makes the 64, and Uniden, of course, makes the PRO-90/BC-235 XLT).

I hope this helps at least a little bit.

Source record: 148931

recently, when i purchased a RS pro-70, i noticed that there wasnt a higher limit, but only a lower. that wasnt thaT IMPORTANT, but when i looked at a uniden bc80XLT, i noticed it didnt have even a lower limit! only preprogrammed search bands. Not only this, but you couldnt just type in any frequency to monitor: it had to be programmed in first. I noticed this to be extremely annoying. the Pro-70 has a lower limit and you can type in any old frequency. why does the radio shack scanner have this VERY important feature while the uniden doesnt? isnt it made by uniden?!
and, does the pro-90 have upper and lower limits or just a lower limit, and can you type in any frequency without programming it first?
this message is probably quite confusing! but if anyone understands what i am saying, please inform me why this is so, and if the pro-90 can do these things.

~~steve~~ email me at Evrclear84@aol.com
p.s. i may be wrong about the uniden scanner not having it, but i think i am right because i called them up the other day and they said it didnt have that feature.
thanks! :-)

If I'm not mistaken, I believe mobile-to-base frequencies are 45 MHz lower
than the base-to-mobile frequencies.

However, you should be able to hear the mobiles on the base frequency (same
idea as cordless and cell phones -- you can only hear one side when
monitoring the handset, but both sides monitoring the base).

A couple weeks ago I was on my way out to Western PA and encountered a National Guard Convoy traveling west on the Turnpike. It stretched from Carlisle almost to Bedford. There was an accident with an overturned vehicle and the National Guard stopped to provide assistance and traffic control. Anyway I had a lot of time to search the low band for the frequency they were using. I found they were using 38.45 Mhz. FM.

I noticed some time back an ad in Nuts & Volts magazine for a PrimeCell battery pack place. Their prices seemed resonable. I talked with the guy a bit about different battery packs. He provided the necessary info. I haven't purchased anything from him yet...nor am I associated with him in any way. You might give his website a look though. It might be cheaper for him to put the pack together for you than for you to buy the parts.

Several service manuals for GRE make scanners such as the Pro-2004
note the fact that any unstable supply voltage to the CPU can produce
a CPU malfunction, such as wrong data processing, wrong data transfer,
etc. It might be best to reset the CPU on your scanner which will also
more than likely erase your scanner's memory. I do not know the proper
procedure to reset the CPU on a Pro-2004, but maybe someone in the
group would have the info handy.

>more crap than me!

There is only one reason for that is true - - there be to many of them only one of you. Any single one of them dont post close to the crap you do. You dont even make sense when you try to and thats not very often, good man. I see times when you try but not much.

Yes!!!!!!! I wish they would stop too but I think they will if you stop. You are the cause of all this these problem and you are responsibile to stop it. Im straight with you buddy. I dont like you but thats no matter because if you would just post about the scanners then me like is also a no matter. Do you see? Or not?

And you got to stop calling them dudes "cheek-a-likes". Someof them and Cheek went at it just like you but they stopped this crap. So it is up to you to stop it too. You must see this. And you must see that there is no gain for you unless you have the hidden agenda of stalking the Cheek dude. I see you said "not" once or two times so if you mean that then stop it right now! And we will see.

This evidence overwhelms that you cause the problems. I got the dejanews too and I gots old dejanews searchs that tells the truth of what happen when and who do it. And you try the lies may be being funny but no body can tell this. Only thing that people can tell is you dont laugh at there jokes and you lie when they find evidences that you did something maybe two maybe three maybe four years ago because may be you forget or maybe you thinks every body else forgets? But some peoples dont forget and some have the dejanews files before some body else canceled lots of stuff. They say it was you who done it me I don't care.

I care that the serious evidences say you not much tell the truth and I think you are joking but no body else thinks that see?. That is what you must see and to stop the problems right now. If other guys dont stop then its not your fault no more. Just before. Not after.

I dont care if you gets mad at what Im tell you. I just want you to stop it and see if every body else stops. And I say it needs two weeks to tell. One week for peoples to notice that you stopped and one week for peoples to watch to see if you start it up all over again. Or to see who you blame for causing the more problems.

This all be your decision man.

Poppa Dom told you that.

How many hand-helds cover the mil. air band (200-400 Mhz UHF AM)

Seems to me as an airshow fan, a milband handheld would be a winner,

Max,
I recently purchased a used FRG9600 with the optional video board (output)
installed, and I paid $375.00 for the receiver. When I posted messages in the
various radio newsgroups stating that I wanted to buy an FRG9600, the lowest
price I was quoted was $375.00, and the highest price I was quoted was $500.00.
I have a friend who also owns an FRG9600, and he paid $425.00 for his receiver

(video board installed) 3-4 years ago.
The asking price for a used FRG9600 varies greatly depending upon the
condition of the receiver (scratches, dings, and so forth), included
accessories, etc. My receiver also came with the original box, service manual,
mobile mounting bracket, power supply (or "brick", if you prefer), and a spare

memory backup battery. Therefore, if the receiver you're considering purchasing
comes with accessories as well as the video board option, I think $400.00 is a reasonable price.
The FRG9600 doesn't scan very well, at least not without the use of a software program like Scancat Gold for Windows. The receiver's CAT interface will allow you to control the FRG9600 with a PC and greatly improve the functionality of the radio.
I find that the VHF performance of the FRG9600 is superior to most scanners, even high-end units like the Realistic PRO-2006. It doesn't seem as prone to intermod as other scanners are, at least not in comparison to my PRO-2006. The FRG9600's reception of FM broadcast stations & TV audio is excellent as well. I use a $17.99 bargain basement Radio Shack antenna and a TV preamp, and my FRG9600 receives FM stations 35-50 miles distant loud & clear.
I believe Yaesu stopped manufacturing the FRG9600 in the early '90's, but I've seen presumably new 9600's advertised for sale online at CB Shop Overloon's web site, so I'm not really sure if the receiver is still in production or not. Hope this information helps.

Source record: 148944

I have done it every time a fly for the last few years. On a flight from San Antonio to Atlanta, I copied lots of shipping traffic on the int'l maritime freqs while over the New Orleans area. Also, when flying above any major city, you should be able to pick up a LOT of stuff. When cruising at 30K feet, that's only about 6 miles up, and it's Line of Sight.

AND - whenever I fly, I always tell the flight attendants upon boarding that I have a VHF scanner and, in accordance with their policy stated in the back of the in-flight magazine, I would like to use it. I'm very polite, as are they. Once the Captain was right there when I did this - he told me a bunch of freqs they were to use.

And BRING HEADPHONES!!!

AND (AGAIN) - in a major airport (I'll use Atlanta as an example) there's lots of freqs to listen to on that long layover - baggage handlers, security personnel, the ground crew outside, good stuff. Search from 450 - 470 mhz. Comms are very recognizable.

Big Bad Berticus sends (i need more channels on my scanner!)

This Clarence Green is not a real person too. He is a fake person wheather you did it or somebody else did it doesnt matter. He take much too long to tell a little story and it dont make any sense what he did tell. Supposed to be a big deal and he spend most of his time telling about Cheek the faggot and not the antenna.

His story has no believableness. So dont use him for your back up. Use some body that is credible and straight if you need the back up. But you never do Mackey. You always use the meatballs and fakes. Not good man.

Poppa Dom told you that.

Robert-
If you have a Pro-2042 w/ OS535 ONLY...then I would suggest
going with Probe software. Probe is the ultimate in software, but
unfortunately for the previous poster, it doesn't work with anything
else but the Pro-2005/2006 scanners with the OS456 installed or the
Pro-2035/2042 scanners with the OS535 installed. Optoelectronics used
to have software links available on their site, but it appears like it
no longer exists. You might try
http://home.ptd.net/~pro2006/probe.html to check out some info on
Probe.

Now look what you did , you hurt mackeys feelings.

The way it looks to me is mackey wants to be Bill, he has two things
stopping him, one Bill is not going to leave the newsgroup.
Two , the only thing mackey knows about a scanner is how to turn the
power switch on and it may work if someone plugs the power cord in for
him as he is not allowed to play with electricity.

Try to see if you can get a Radio Shack Pro 26. They are discontinued in the U.S. but still may be available in Canada and fall in your price range. This is one of the few hand helds in a decent price range that covers military air. The scanner is made by Uniden for Radio Shack.

I have very little experience using scanners. I wanted to know how close you have to be for your scanner to pick up a frequency? I know it probably depends on the radio, but on average. For example, our local airport is about 10 miles down the road. Would I be able to pick up transmissions? Thanks for the info.

You mention the PRO 64 in other posts. Please keep in mind it is discontinued by Radio Shack and was cleared out at $100. There are probably few if any left in the U.S. I agree it is a good scanner especially at the clearence price. They are probably available only in the used market now.

Thanks for the offer Mike. You know of a good source for airline Ops, gate agents, baggage handlers etc.? I can usually find all the airband stuff I need at http://www.airnav.com/airports/ or an AOPA guide.

You can usually pick up airports usually 50-60mi away.
Police, fire ect... usually 10-20mi away

BB> John, this is another lie.
BB> Would you care to provide your source of misinformation?
BB> Know, though, that I will verify.

Blake, it's already been verified by his former host/NC
Brenda Donovan as another mackey lie. I was in NET202
at the time Cheek announced his leaving THREE MONTHS in
advance. He even conducted an election in SCANNERS for
a new moderator, which mackey tried to swing with netmail.

And you know as well as anyone that Fido doesn't give
30 day notices. When you're a bad boy, you get your
link cut immediately.

Mr-shoe-sized-IQ mackey doesn't have common sense to
learn the inside workings of anything he talks about.

I will admit that I've posted misinformation. Yes, it is true, but you don't need to harp on it! Usually (over three-quarters of my posts) I know what I am talking about, but when I do try to answer a question of which I am not sure about, I ask others (who also may be wrong) or I try to state what I know about the subject.

Again, just stop this hellish crap and leave me alone.

>digital cordless phone or digital cell. is not able to be eavesdropped
>on. bummer...

I definitely agree with you here, that is, unless your phone has the
words "spread spectrum" written on it. I bought my 900MHz digital
cordless phone a couple of years ago, and recently was trying to pick
it up on my scanner, and heard nothing but a modem-like buzz. I suppose
if someone has a digital-to-analog converter, they could decode the
signal and generate audio, but that's not one of my biggest worries.

My next cordless phone, though, is going to be a digital spread-spectrum.
No matter what the scanning industry comes up with, this is not going
to be listenable. Depending on the type of spreading used, the phone
either switches frequencies about four times per second based on a long,
randomly-generated "chipping sequence" known only to the handset and
the base, or it encodes the digital signal with a large amount of
redundant and check data, and spreads it simultaneously across a
range of frequencies, the sequence of which is again, only known to
the handset and base. If you don't have the exact chipping sequence
or spreading code, you'll hear something that's essentially
indistinguishable from white noise.

It seems that if the government hadn't been so busy passing
laws to give people the illusion that their radio conversations were
private, instead of letting people know clearly and unequivocally
that they were *NOT* private, that this technology would have been
very widely deployed by now. That's what's unfortunate.

1008. John and the Kinky Woman from the Bar

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: Phil Smalley <ziggy7445@yahoo.com>
Message-ID: <35C9FD14.749F@yahoo.com>
Source record: 148985

I heard a good one today and thought I'd share it with you:

John Mackey was depressed. His wife had just kicked him out and he only had a few bucks to his name. So, to make the best of a night in the streets, he decided to spend his last few dollars at the bar.

A short while after he arrived, a beautiful woman enters the bar and sits next to John (yeah, I know, it would never happen, but stick with me kids). She begins to explain that she just got kicked out of her house.

"What a coincidence! So did I!" exclaims John.

"See," she said "I'm into really kinky dirty sex, and my husband isn't."

"This is spooky," said John. "I got kicked out of the house because I like to have really kinky sex and my wife doesn't. She said I was just too weird and she never wanted to see me again."

"That's what my husband said to me, too." said the woman.

They thought about it for a while, and the woman finally said "Wanna come to my place?"

"Sure!" said John.

So they went up to her apartment and the woman said "OK, make yourself at home, and I'll be out in a minute."

"OK" said John.

So the woman puts on her spiked leather teddy and puts on her cowboy boots (with spurs), grabs a whip with one hand and her handcuffs with the other. She comes back out and is shocked to see John leaving.

"Wait", she cried. "Where are you going?"

And then, hee hee, John says, ha ha,

"I JUST FUCKED THE DOG AND SHIT IN YOUR PURSE. I'M DONE!!"

BWAAAAAAAHAHAHAHAHAHAHAHAHAHAHAAA!!!!!!!!

-Phil

P.S. To the "what does this have to do with scanning" morons: As the subject implies, this post has NOTHING to do with scanners. Deal with it.

None of which will do you any good. Check
http://www.panix.com/userdirs/clay/scanning/frequencies/states/az/
for a list of links to some Phoenix sites. If you make regular trips out
here, I personally use and recommend the Southwest Frequency Directory
for accurate frequency info. You can find 'em at Bronco One CB or Ham
radio outlet in Phoenix.

Yes. I use the agc jack for discriminator output.
A small buffer board is used to tap and isolate the discriminator signal and the buffer output lead is soldered to the small inductor just adjacent to J23. The inductor is intended to suppress RFI so make sure you solder to the correct end of it. You could of course connect directly to J23 but if you solder to that it's going to be hard to replace the jumper if you decide you want the agc output back.

1014. What Scanner Should I Get?

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: SeanH@ii.Ca
Message-ID: <35c9fd76.4277004@news.westel.com>
Source record: 148991

Hi there!

I'm not sure what sort of scanner I should purchase or what brand, so I am looking for opinions on scanners.

Here's what it should be able to do...I'd like a handheld scanner, that is capable of recieving police/fire/ambulance transmissions, any other law enforcment, aviation (civilian and military), coast guard, naval, etc, etc, etc. Primarily public service stuff. I have no desire to listen to cellular conversations or decode pager transmissions. It's public service and public safety stuff that I am interested in. It should also be able to pick up frequencies that auto racing teams use, ie. CART, IRL, NASCAR, etc. A long battery life is also important.

I'd like to get a reliable brand name like Uniden, or something. I had wanted the BC-3000XLT, but the cost in Canadian dollars is something like $700, which is WAY too much. I'd be willing to spend around $500 dollars Canadian, so I hope that provides enough information. I have read the FAQ on scanner briefs, but the briefs don't provide quite the depth I'm looking for.

Thanks in advance.

John Mackey please get on topic and stay on topic.

Enough is enough, good man. If you claim to be here about scanners, then post about scanners and stop your fantasies with the Cheek guy. He offered you a deal. Just accept it and see if you can talk about scanners.

Because you don't talk about scanners Mackey, is very suspicius to seem like you have a different agenda for this newsgroup.

So what is your agenda here? Do you not like scanners too much maybe? You tell Poppa Dom what is your matter and what it takes to get you to finish your agenda. And then you an me will sip some grappa and talk about the old time hey? You like the grappa?

> Just make a guess.

Perhaps it would be best to start with an estimate of the Mack's on to off topic post ratio. He is the problem and every thing else is incidental. Mackey has electronicly stalked and harassed several people here for a very long time. He won't stop and it doesnt matter if every body else stops or not because Mackey won't stop. This matter is three or 4 years old and the only ways to stop it now is to stop the cause. Mike Alexander and the others are not the cause. Mackey is.

You dont cure a toothake by cutting off the head.

Poppa Dom said that.

I certainly agree. Unfortunately, Datafiles, the company that sells Probe does not offer a demo, so you have to go on faith that this is the program to buy ($125). It's a DOS program, BTW, so some people might find that objectionable. OTOH, it's fast and will also crank up your scanner's speed by a factor of two. I get 80-90 cps with it on my 2042.

The company doesn't have a web site either, but here is one site that has good Probe info:
http://home.ptd.net/~pro2006/

Datafiles@aol.com is how to reach Perry Joseph, Probe's creator.

1028. RadioShack 99 Catalog Preview

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: jdhtex@aol.com
Message-ID: <6qd98m$t3k$1@nnrp1.dejanews.com>
Source record: 149005

The 1999 RadioShack catalog should be available by the end of August. I have seen a copy and here is what is new that you scanner listeners might be interested in.

There will be ten scanner radios. Five handheld radios (two trunktrackers), four base models (one trunkracker) and one mobile scanner that will be a trunktracker!

The Pro-90 is in this catalog. There were some unfounded rumors in this newsgroup that they would soon be discontinued. This model is selling fast so I don't think RadioShack is wanting to drop it from it's line up. The leather case for the Pro-90 has moved to the RadioShack Unlimited ordering system. Extra batteries sell for either $19.99 or $24.99 depending on which representative you talk to.

Probably the biggest news is the introduction the pro-2066 which is a mobile scanner that has trunk-tracking. This looks very much like the Pro-2046 that it replaces. It has 150 channels and a similar display to the Pro-91 (the Pro-91 is RadioShack's other handheld trunktracker). The caption in the catalog says it has service search with CB, but the specifications indicate that coverage starts at 29 MHz which is above the CB band.

Gone is the Pro-2042. The 1000 channel scanner that could be modified with the Optoscan computer controller is discontinued and is pretty hard to find. Good news to anyone that can find it at RadioShack, it is only $249.97. This means that RadioShack no longer has any scanners that are capable of receiving the military air band or the 220 ham band.

There is a Y-splitter for use with mono headphones. It's about time since almost all the RadioShack scanner have mono headphone jacks.

That's about it. Not much more that is all that exciting. In fact the new catalog looks almost the same as last years catalog and doesn't have very much more for us scannists.

> button it will change freq sometimes back to the origianally programmed
> one and sometimes just anything at random. Anyone have any ideas on
> this?

Try the following (The 2004's are getting senile in thier old age...):

Change the memory battery then do a complete memory clear (Hold down the
reset button on the front panel while pressing the reset button on the
back of the radio.)

I have had the same thing happen on a few of my 2004's over the years, and
this seems to work well for me.

If it continues, check the various cables connecting the board together
inside the radio. Onee or more may have worked loose or got some sort of
crud in it.

Yes. It is a great site. I bookmarked it, but it doesn't have anything on BYU. Utah isn't exactly "Scanner Central", so it wouldn't surprise me if I was the first one to try to map the fleets.

Thanks, It's nice to see you are still around (even though nothing has changed in this n.g. since Bill arrived).

1042. Radio Shack Pro-2042

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: jeff.adams@gscxyz.gte.com
Message-ID: <35cd215c.1550505438@wlbr.iipo.gtegsc.com>
Source record: 149019
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Does anyone have an opinion on how good a deal a brand new Pro-2042 for $250 is? I've got an old Pro-2005 and wouldn't mind getting more channels and faster scan (and other memory features, etc.)... I've read that the receiver in the 2042 isn't as good as the 2005. Anyone have any information? Is this a good radio? Better than a Uniden BC-9000?

Thanks,
Jeff Adams

KA0SSF <jmackey@parg.org> writes:

>Add number 6 & you got a deal Bill!
>
>6. Post no Flames or nasty messages on rec.radio.scanner.

Okay, John, let me make you an offer,
and it's dead serious - no jokes, no jabs,
no flames.

If you're really serious about ending the
flame wars, then let's *you and I* make that
deal. The whole thing -- Bill's
five points AND your #6. That means
neither one of us can post flames or
nasty messages to or about ANYONE,
if I interpret it correctly. I'm willing to abide
by that in good faith, if you are.

I do not now nor will I ever presume to
speak for anyone else without their
authority, but I'm pretty certain that if
you and I make this deal, you'll see the
end of the flames from others, which is
what I've been seeing you say is what
you want.

Regardless of our differences, I'm
willing to abide by all of the conditions,
including the "post no flames or nasty
messages" condition, realizing that means
it applies to both you and me even if a third
party flames one or the other of us.

John, if you're really serious about ending
the flames, just send me a message, either
here or in private e-mail, indicating that you
accept. If so, the deal will take effect
immediately.

Whaddya say?

Dave

1044. Poc32 Problem Solved!

From: Ryan Faricy KC0DSZ <jtonsa@nospam.att.net>
Message-ID: <ed0FpQYw9GA.51@upnetnews03>
Source record: 149021

I got a great suggestion while searching DejaNews for making Poc32 work without a data slicer.

Set the line-in level to just past the first notch, and set the volume on the scanner about halfway. Then, Poc32 decodes everything almost 100% perfectly. I always get a 95 to 100% success rate.

[Wants to know about 895 software and ponders why the cable is so expensive]

Looks like you need to fire up the web search engine. There are a number of
very good FREE or nearly FREE (under $10) solutions to your "problem."

Two good programs on the market that are free and are better in many respects
than their considerably more costly alternatives are:
PC895 and Freetracker.
Freetracker can be found at:
http://www.autowinnet.com/
PC895 can be found at http://www.mghusa.com/scanner/pc895/
PC895 includes instructions on building your own cable as does:
http://www.futurescanning.com/index.htm

Yupiteru MVT-7100 Multiband Scanner/Receiver

- frequency range from 530kHz to 1650Mhz in receiving modes:
Wide FM, Narrow FM, AM, LSB and USB (including cellular band)
- twelve frequency steps can be selected
- 10-band search function
- 1000-channel memory
- comes with car connector, hand strap, belt clip, earphone,
original box, owner's manual and original receipt
- purchased in November 1996: used no more than 25 hours
Price: $500 CANADIAN CASH FIRM

Originally paid over $900 from Atlantic Ham Radio. This was the
second model from the top back in 1996. It was hardly ever
used (practically brand new). Yes, from the above frequency range,
you can receive all analog cellular conversions!

Serious inquiries ONLY. Located in Toronto. Leave a voice number
if interested.

As long as you're in the U.S., it's illegal
to monitor either cordless or cell phone
transmissions.

I would never encourage anyone to break
that law, but I would observe that it would
be virtually impossible for anyone to catch
you at it, unless, as a handful of folks have
done, you went public with conversations
you had taped from those sources and, in
essence, told the world you had done it.

Best regards,
Dave

Just about every week I see PA and NJ National Guard
convoys traveling the PA turnpike and route 81 to
Camp Drum in NY state. Does anyone have any idea
what freqs they might use? They all seem to have
those super long whip antennas so I am guessing
it may be Low Band VHF. I have tried 32.5 and 40.10
but have hear nothing.

These aren't the kinds of posts that anyone
would take the time to forge, Hermie. They're
not derogatory, debasing, or all that far
off kilter. And there were MANY of them from
you at cyberway.net.

If someone were out to get you back three years
ago, there would be no doubt about the intent
and the content. But these posts of yours from
CYBERWAY.NET are not forgeries. Who on earth or
in hell would bother to write shit like that and
attribute it to you? You're nuts to even suggest it.]

If I were to forge something in your name, I'd
have you confessing to incest with your dead
dog or something like that. Neither I nor anyone
else would bother to write a series of lengthy
and inane posts over a long period of time.....

Stop the lies, Mackey.

Ha ha ha ha ha ha.........

One post. From HIM? So that's HIM and YOU.
WHO are the others? You've got to do better
than that, Hermie. You and HIM were among the
few I'd not pee on if you were on fire....
so produce some more "posts", Hermie. DO IT!
I defy you to do it. I dare you to do it.

You CAN'T do it, Hermie.......

> Yankton College, Yankton, SD.

Is that where you first yanked yourself?

> Now tell me the rest of YOUR info so your degree may be confirmed.
> (title, date)

I don't tell you shit, Hermie. WHO I am and WHAT
I've done just doesn't pertain to you in the slightest.
I justify nothing to you; I defend nothing to you;
and I care not a whit about you, your ancestors, or
your progeny.

I just laugh at you and at your obsessions with me.
You are a laughingstock and the newsgroup idiot.
Nothing more; nothing less. Just utterly, totally,
and completely worthless.

And then I hear you've been peddling ham licenses
for $20 a pop.

Hang your head in shame, Hermie. Better still, YANK it.

> > you flippin weenie, I won't flame you, and
> > I couldn't flame you if I followed the other
> > points of the proposal.

> No Bill that was a deal I offered YOU!

I don't entertain or consider "offers" from you.
Your "offers" are absurd, ridiculous, and
self-serving. Your "offer" included others
besides you and me, but you are not authorized
or capable of speaking for anyone but you.
Same here.

> But regardless
> I don't care who gets the credit. If you are willing to accept
> the condition of "post no flames, or nasty messages"

I'm not. If someone flames me or posts nasty
messages to or about me, I will deal with them
on their own terms. You may not dictate those.

Just THEE and ME, Smacksie. You deal with others
as you see fit, same as I will.

> then we have a deal!

The ONLY possible deal is betwixt THEE and ME, Hermie.
It will NOT include anyone else.

> That's all that is important, say it is your idea if
> you want, I don't care.

It is MY idea that you and I pound out THIS deal:

1. You and I don't communicate TO each other.
2. You and I don't communicate ABOUT each other.
3. You and I don't REFER TO or INSINUATE ABOUT each other.
4. You and I don't even THINK about each other.

5. Period. No if's, and's, or's or but's.....

Just THEE and ME, Hermie. That IS the deal, and that is the ONLY deal. No truces. No "white flags". No speaking for others. No heroics about "saving the newsgroup". Just plain and simple as stated above.

1082. Trunked Radio System Ques.

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: Nick <gary0136@ptd.net>
Message-ID: <Mily1.2617$pI2.5147835@nnrp2.ptd.net>
Source record: 149059

For about a month now, I've been mointoring my city's trunked radio system with a trunktracker. (BTW, I've been monitoring it for over a year with a conventional scanner.) In June, they stoped using their 860.xxxx MHz freqs, and switched to only their 850.xxxx MHz freqs. On Monday, I got back from vacation to find they've made more changes. On certian channels, like Police TAC for instance, I can only hear base talking to the mobile units. I don't hear the mobile units talking to base. However, it's not that way on all channles. Like, on Police Dispatch I don't have that problem. I have the same problem on my trunktracker (Pro-2050) and on my conventional scanner (Pro-67). I programmed every frequency listed in Police Call into my Pro67, and still haven't had any luck hearing mobile units on certian channels. Any ideas?

There sure is, and all you need is a soundcard and a scanner, check it
out!

http://aab.42.org/poc32/

and if you are interested in pocsag & flex paging check out:

http://www.geocities.com/CapeCanaveral/Launchpad/4039/

You will need to build a very simple interface with about $6 in parts.

Good luck!

From: John <mcdermon@usa.net>
Message-ID: <8e8y1.36$qb3.34160@news.mci2000.com>
Source record: 149103

Chris Lougee wrote:
>I would simply ask you to judge Icom based on your own personal experiences...

Chris... I think many of us have done exactly that. We bought an Icom product based on reputation and potential - only to find it abandoned and poorly supported by Icom. The opinion I have formed is mine - not based on anyone's experience except my own.

The PCR1000 is my first, only, and LAST product I will ever buy from Icom. I thought I was buying a computer controlled radio that would be aggressively supported by what I had perceived to be one of the strong players in the receiver marketplace. My opinion of Icom was very high in the beginning. And my expectations were not extraordinary by any means. I think I am speaking for a fairly broad cross-section of owners when I say that.

I bought my radio as many hobbyists do, planning to use it for my own purposes - and with the full expectation that it would be widely supported by many third party software houses - just as ALL OTHER Icom radios have been for many years. But, Icom pulled the rug out from under my plans, and attempted to squash third party software efforts with their refusal to release any documentation on the command protocols needed to properly control the radio. Lip service was given to "licensing" the commands to "qualified vendors", but that plan changed right before my eyes from a simple NDA agreement, to a $500 fee and NDA, and then to a plan that made the software vendors have to promise they would sell more of the radios. Then it hit rock bottom when Icom even refused to grant the licensee the right to say that his software was "Licensed from Icom" or even that he was using "A licensed command set"... Icom was wanting it both ways. License it (for who knows what reason) and then distancing themselves from the fact that they had! This was really disgusting behavior for a large company like Icom...

Then, when 'reverse engineered" software solutions became available,problems with the EEPROMs also surfaced. Icom soon began to blame the 'other' software for the outbreak of corrupted EEPROM data in the radios. Its hard to say if the two were related in any way. I suspect that the EEPROMs in some radios are just more susceptible to corruption than others. Mine suffered such a fate. THe failure wasn't as much distress as what followed after I got it repaired. Gary Fiber (bless his heart -- he's one of your good guys) helped me get my radio fixed. That was the brightest moment for me in this whole ordeal over the past 8 months.

But upon receiving my radio back from having the EEPROM data being realiged, I was advised in writing that Icom was implementing a policy that future

EEPROM corruption would be regarded as "evidence of use of third party software" (a now forbidden practice obviously) - and that it would further be considered the SAME as a 'hardware modification' thus voiding all warranty on the radio. Net premise of this policy is that if an owner dares use third party software or write some of his own (perhaps to support a different computer or a unique application requirement) Icom considers that the same as making a "hardware modification" to the radio and will void the warranty!!! Surely you can't be serious! This happens ALL THE TIME with all your other radios, and you've not taken such a stand before. But apparently you are serious..... It is puzzling to me and to all PCR-1000 owners. If in fact the radio is so easily "corrupted" by erroneously coded software there are only three courses of action that would make sense:

1. Recall all the radios and fix the problem.

2. Create and offer an EEPROM backup/restore utility (have you heard that before!!! LOL)

3. Release the command documentation so one and all can write proper software and avoid the corruption problems.

Icom has steadfastly refused to do ANY OF THE ABOVE! In fact, to my knowledge, Icom has done ABSOLUTELY NOTHING to help in any of these areas.

Now tell me this.... Would you be a happy customer to spend $500 for a "computer controlled radio" and then be told you can ONLY USE IT WITH THE SINGLE SOFTWARE SUPPLIED BY THE MANUFACTURER? Especially if that software has less functionality than the cheapest handheld Radio Shack scanners for under $100. I doubt it. If you are honest with yourself you'd see how frustrating this is for the owners. If you think owners should be happy, well, then you really don't know your customers at all...

Little could I have imagined how poorly Icom would support this radio and the many of us who bought them. I would relish you sharing with this forum Icom's plans for correcting these shortcomings that have made this venture so distasteful for one and all...

Most sincerely yours,
John McDermon, KE4VAL

1118. Re: What type of paging system is this? (sound attached)

Well I was thinking maybe the first burst was 512 pocsag and the
second was 1200, if highly distorted they will sound similar to 2-tone
paging at the beginning of the transmission because of the preamble.
The second burst sounds like a higher pitch and the data seems a
little faster, which would match with the pocsag speeds.

If I have to I can take it to work and analyze it...I do happen to
work for the worlds largest paging infrastructure manufacterer...in
the main R&D facility

There are some, but the only one that really works is from a company called Satellital. Price are over $1.000.

If you find something better please let me know.

Yes, it is sad that you are correct that this NG has declined in
quality greatly due to the constant flames & bickering. There are a few
specific individuals who do anything they can to continue the flames.
One individual says about twice a week that he is putting those who
he dislikes into a killfile & brags that there is no way to get past
his killfile, then a few days later there that same person is back in
the thick
of the problems stirring up all the trouble he can.

I suggest you subscribe to the SCAN-L mailing list moderated by
Peter Laws. They recently ejected Bill Cheek FOREVER and according
to the regulars of that mailing list, it now runs quite well.

Good luck!

If there is anything more I can do to assist please feel free to ask.

Who are you trying to kid John? Everyone knows that you're the
Infamous Rogue Canceller of rec.radio.scanner. Isn't that the
main reason why you lost your Sprint acccount back in April?

You've done it before and you most likely did it again from
various Public Libraries and Community Colleges in the Portland,
OR area.

Motorola has had a product in the marketplace for some time. I don't know if it works with their portables, but it originally was set up for mobiles (installed). Depending on your application that may work. As I recall, it was somewhat affordable. Required, of course, a device on either end for it to work.

To join MilCom, the military monitoring e-mail listserver,:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your location
and requesting frequency help and you should get some answers.

Have 2004 with cell and 400 channel mods. Every 4th thru 8th channels repeats the previous freqs when programming and when scanning. It will also scan locked out channels and shows oddball freqs that weren't programmed. When it stops on an unprogrammed freq and you hit the manual button it will change freq sometimes back to the origianally programmed one and sometimes just anything at random. Anyone have any ideas on this?

Even if you never monitor a trunked system - for the going prices,
this scanner is hard to beat! Nice back lighting, 300 channel storage
- preprogrammed "service search" ranges....

I sold an older scanner (a pro67) and got this one when the price hit
$239 (US) - and with the price still dropping, I am not displeased, I
have really used this baby!

It's a great unit. Get one.

Hey, pay a little more and with the exchange right now at its all-time low, you got a great selection of new, no-800Mhz gap scanners for an awesome price...

If you're looking for no-gap radios, don't go to Radio Shack - their scanners have 800 Mhz gaps, just like U.S.A., I presume.

Yes, I see. But which one are you, #1 or #2?
That's the part that's hard to see.

1172. Re: What type of paging system is (sound) Its the link of a POCSAG paging system

Newsgroup: rec.radio.scanner
Date: 1998-08-06 00:00:00 UTC
From: Raquel Ruark <raqy@direct.ca>
Message-ID: <YFdy1.1424$I61.5449535@newsgate.direct.ca>
Source record: 149158
Cross-posted to: tnn.comm.pager,rec.radio.scanner,alt.radio.scanner

To answer the original question, this is the link frequency of a paging system doing 512 and 1200 baud POCSAG

Boring technical stuff to follow:

Without putting it through a data-analyzer (just listening by ear) I would say that this is the link signal of a paging company.
This is what the signal sounds like if it were modulated with Bell 202T modem tones or possibly V.23 or NOVATION modem tones these tones are very close, so I can't tell with my ear. Since hardly anyone uses novation I would suspect it's Bell 202T modem tones or V.23. Since the warm-up was not included I can only speculate on the simulcast controller. This is then sent to the final drop transmitter where it will have a more characteristic sound. These type of modems consists of 2 tones and shifts back and forth between the two tones (one tone is 1 the other 0)

The first bit is 75Hz TX Warm-up. This keeps the transmitters alive, as some digital transmitters and most pagers can't
just rest on MARK or SPACE carrier. The next tone is a pre-pocsag preamble at 750 Hz. This isn't in the POCSAG
spec but is required for pagers such as some NEC, the BRAVO and some other pagers to ensure synch loss to any previous
batch and provides a discriminator zero effect that helps that analog discriminator in quite a few models of pagers. The next
portion is the 576 bits (presumed) of 512 Baud POCSAG preamble, then 1 single batch of POCSAG including SYNCH and 16 codewords this is, followed by a higher speed pocsag batch. I can't tell with my ear if the POCSAG was anything special like SCANNING POCSAG or NEWPAGE traffic. The odds are it's just vanila POCSAG. I couldn't quite hear if they had any sort of pre-pocsag burst at the front, I need to scope it out to see that. It is then followed 75Hz digital time-out followed by a Downkey simulcast controller burst. Off hand I would say this is produced by a 140-0868 UOE card running Version 3.11 firmware or higher or something with similar characteristics. I couldn't quite tell what simulcast control was being used with my ear. The KEY sequence was not included and this usually contains more tell tail signs than a downkey burst. My curiosity isn't quite pushed enough to confirm the simulcast controller type and firmware. Technically, decoding the data and telling someone else is against the law in most places. If you ran this signal into a V.23 or Bell 202T modem and then to a digital transmitter, in theory you could make the pager beep.

Greg

The above opinions are my own, not those of my company

Welding is clearly permitted. And I'd note that brazing is considered
a form of welding since fusion between the base materials and the
brazing material occurs. So-called hard soldering is a form of brazing.
Soft soldering is not because no fusion occurs. (Fusion is when the
materials diffuse into each other rather than just bond at their surfaces.)

>Article 250-83(c)(3) states:The electrode shall be installed such that

>of ground rings for lightning protection. The NEC is not a design
>manual, only a legal bare minimum for protection of life and property.
>I suspect that the recommendation may have appeared in another
>technical venue.

250-81 lists the approved grounding electrodes to be used.

a) metal underground water piping
(but note this may not be used as the sole grounding electrode)

b) metal frame of building
(when the frame is effectively bonded to earth by the building
construction method)

c) concrete encased electrode
(Ufer ground)

d) Ground ring.
(must surround the premises, be 2/0 copper, and be
buried to a depth of 2 ft 6 inches)

Note that 250-83 says made electrodes (ground rods) are
to be used when none of the grounding electrodes in 250-81
are available. In other words, rods are the ground electrode
of last resort if you can't use one of the ground electrodes
listed in 250-81.

I'd note that the NFPA has had a working group looking at "early streamer
emission" terminals for some time. They have concluded their work and
declined to endorse the methods.

(One shouldn't take that to mean that they necessarily condemned use
of such techniques, however. But there does seem to be some controversy
over the claims of enhanced effacy of such techniques compared to
conventional Franklin rods.)

>(I'm joking). It would be nice if some one would comment on the current
>induced in wiring by nearby lightning strikes.

Yes this exists. It is called EMP (ElectroMagnetic Pulse). You can consider
the wiring on your premises to act like an antenna for the radiated energy
from a nearby strike. Depending on all the various factors germane to
antennas, large potentials or large currents can be induced into your wiring
from a nearby strike.

If the strike is *very* nearby, ordinary near field transformer induction also
exists. The strike path forms the primary of the transformer, and your wiring
forms the secondary. This generally results in even more severe potentials
and currents flowing in your wiring.

Protecting against EMP is one of the two primary reasons for using
suppressors. (The other is to deal with direct strikes.) The requirements
for protection against EMP are somewhat different from those required
to handle direct strike currents, but very low risetime response is still
critically important. The suppressor must clamp within 2 ns to provide
protection for electronic equipment (some sensitive equipment requires
picosecond response).

Hello,
I have a BC235XLT, which I like a lot. However, I notice several gaps in the frequency reanges and was loking into getting something with continuoius coverage. Thus, I was thinking about the BC3000. ANyone have it? How do you like it?

One thing I don't like about my BC235 is that it "feels cheap"...like if a even bump it against something, it's going to fly apart? ANyone else feel this way? What other brands of scanners are equivalent to the 3000? How about desktop versions??

TIA<

After reading Rich's review as well as swapping e-mails with a few people, I decided that I really didn't want the 8200 after all. I just bought a Yupi MVT-9100.

I also figure that the 8000 will come down in price sooner or later and I'll pick up one of those too.

>if i were to decide today i would put more money aside and wait
>for this aor 7000 that ive been hearing about.

I think you will be waiting quite a while for that one... It's a base unit any way, which doesn't really appeal to me that much (at least not today). I'm more than happy with my 2042/Opto combo and my BC895, which is a great scanner for the money, with or without trunk tracking.

I'm also waiting to see what RS offers in the way of a mobile TT.

I understand that you can't use the offset mode for 9000s sold outside of Japan; instead you have to set it up according to whatever country you're in. That's a pain but, I'll live with it. That's certainly one of the advantages of the 8200. With a PC hook up you can reprogram it to the (whatever country) bandplan you want.

Rich Wells in his review "overall" seemed to like it better than the icom r-10, and you would have to spend at least $150 or more to get a scanner w/ this freq coverage that is as good or better, and it wouldn't come standard with a drop-in charger.

Yeah - I also have an R-5000, wouldn't part with it! Been happy as clam with it for years. The PCR1000 would be put toward mainly toward VHF-UHF stuff.

I'm sure there will always be satisfied and dissatisfied people with any product. Some will suffer trash, others will nitpick the most stellar of products. I also know the disproportionate power a few well posted flames can have. But as I poked around newsgroups and web sites when I first thought about the PCR1000, the dissatisfaction I saw was not a couple of malcontent grumblers, but a lot people who knew scads more about the hobby than I did who were posting very well thought out concerns.

I just have a bit of a problem with Icom's software being so lame and simultaneously;y making things so difficult for third party developers. I got an R-10 a few months ago because it looked like a nice performing radio in an attractive package, enough to suffer through the quirky programming. But one shouldn't have to put up with this stuff in a computer controlled radio - the whole point to computer control (to my way of thinking anyway) is expanding the boundaries of controling the radio, not hamstringing them.

I may buy one anyway, my hope is in time the available software will mature. Thanks for your comments.

I've had a BC3000 for over a year and love it. It's built very solid and have been very impressed at the beating it can take. Don't laugh but I had mine in Bosnia and used it to monitor other nets while on patrol. It fits the Army's load bearing vest pouche's perfectly and I took a few spills with it. I've dropped it more that a few times and done some other boneheaded things. All in all the thing is still working well, no problems, and minor scratches.

My tip about filters: Read the NG for a week or so, then decide for yourself. No offence to Brett, but his filters are not appropriate to me, and mine would not be appropriate to him. Neither of them are appropriate for anyone but ourselves.

I have a M-450 Decoder and i realy don't know how to use it but i set
the decoder to alpha-numeric mode and i set my scanner onthe 929.9375mhz
and 929.1375mhz frequency and this is what i got........

2007669=A
2007926=A
1745525=A

Can some one explain what this is please? Thanks!

More than likely, it might be easier and cheaper to sell the Pro-43
and order a OS535 from Optoelectronics. The OS535 is currently $175
and you can probably get $200-250 from the scanner. Usually there
won't be someone with an extra OS535 unit lying around and would
choose not to take one out of their Pro-2035/2042.

1217. Mackey Identified as Usenet Abuser, Expanded List

Newsgroup: rec.radio.scanner
Date: 1998-08-07 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <35CBE195.CD730659@primenet.com>
Source record: 148703

The point was raised that my posting of John Mackey's inclusion on Joe Greco's list of Internet Abuser's was incomplete because I left Bill Cheek off. The question was also asked who else is on the list. Those are valid points and I will address each one.

Who else is on Joe Greco's list?

I searched all postings of the list since January 1, 1996. That date was chosen because it coincides with the date of the first known post by John Mackey. Anyone who has had more than a passing exchange with Mackey was also examined. The list was queried for the following people (yes, I included myself in the search):

allsafe@netwit.com jmackey@usa.net
bbowers@townsqr.com jomackey@hotmail.com
bcheek@cts.com john.mackey_jr@p234.f40.n105.z1.fidonet.org
bcheek@san.rr.com john.mackey_jr@p234.n40.f105.z1.fidonet.org
cc732@freenet.buffalo.edu jtons@att.net
dmi1@my-dejanews.com k4cc@aol.com
dmi853@juno.com malexander@aol.com
fire.chief@waprgate.com scantech@concentric.net
geovet@thevision.net sgambino@my-dejanews.com
jabberjaw@uunet.com thecbguy@iname.com
kmackey@aracnet.com traveler@cyberway.net
jmackey@pacifer.com wa7twi@primenet.com
jmackey@parg.org ziggy7445@yahoo.com

What were the results of the search?

Three people made the list. John Mackey, Bill Cheek, and K4CC. Mackey showed up five times, Cheek three times, and K4CC once. The data for all nine listings is shown at the end of this article.

Who are some of the other people on the list who are unrelated to the Mackey/Cheek discussion?

These are some of the addresses on the list. They are very typical of the whole list and self-explanatory.

I just orderd one of the MVT-9000 MII from Bandercom on the 21st and same thing here its
been
2 weeks and nothing yet. Just curious but did you order the stock one or the moded one?
I would also be interested in exchanging tips or asking/answering questions. A mailing list
seems like a good idea to me.
By the way is there anyone out there in the US that has ordered from Bandercom before? How
long did it take for them to ship to you?

Dear Ryan,
I apologize for coming down so hard on you. It took a mature attitude to admit to a lack of knowledge about aviation. After 36 years in aviation, both as a airline and corperate pilot, I just could not just sit and allow the mis-information that was being posted continue. The stuff you posted was in the ballpark, but not close enough to the truth. My intentions were to get you stop posting info that you are not intimately familiar with. This leads to the propagation of half-truths and mis-truths which contributes to the publics ignorance. All I ask is when posting info your not 100% sure of use a disclaimer such as 'I Think'.

And now a little advice from a 57 year old. You have a whole lifetime of learning ahead, don't waste it. Remember knowledge is power. The more information you have the better equipped you are to make the right decision. Wrong information leads to wrong decisions.

If you need info on aviation, I'll be happy to help. Just ask.

As I'm frequently out of town on trips, It may take a while to for a reply.

Yes, the Sony is a great receiver. It does cover mil air. And if you
can do without computer control, the SC1 version comes without the
PC interface & associated CD-ROM database (PerCon) thus lowering the
price to about $260.

Try my First Impressions of the SC1PC :

I don't think so, but you can try. I believe the receiver is made for the 45 MHz difference between base/mobile, but I think the gap is different in the 900 MHz range.

What are you listening to -- cabs? I hear a lot of taxi freqs around 935 MHz.

Steve,

None of the Trunktrackers including the PRO-90 will trunktrack
anything but Motorola 800 MHz systems.

From: andy <acorbin@roanoke.infi.net>
Message-ID: <35CB6AD1.43DD@roanoke.infi.net>
Source record: 148742

I have two trunk tracking scanners. One is a BC235 (handheld) and the other is the RS Pro-2050. Both of these scanners, on occassion exhibit audio clipping, or specifically, on voice peaks, the radio quits receiving, and part of a word is cut out. I think this is due largely to some levels that are set too high on the trunking system I am monitoring. I know several other people who experience the same problem, and I see this problem on some of the Motorola portable radios that use the system (Motorola Flashport MTP2000) to a certain extent.

I was wondering if anyone else may have experienced this problem on any other trunking systems. If so, which scanner are you using. Any BC895 scanner users out there experiencing this problem???

Andy

Sorry, the Trunk Tracker doesn't "track" anything but the 800 range. The 900 range has a different "gapping scheme" (for lack of a better phrase). In the 800 range, it's a difference of 45 MHz between the base and mobiles. In 900, it's not.

1249. Re: ICOM Information (PCR1000 addendum)

Newsgroup: rec.radio.scanner
Date: 1998-08-07 00:00:00 UTC
From: John McDermon <mcdermon@usa.net>
Message-ID: <o8ly1.678$oW3.526961@news.mci2000.com>
Source record: 148751

Rob,

As I have been among the more outspoken critics of Icom re: the PCR1000 let me offer my thoughts. Contrary to what Leonard Weldon has to say, I am not a perpetual malcontent. :-) In fact, in my 49 years this is the first time I've really been outspoken against the policies of any manufacturer - radios or otherwise. But this time Icom was asking for it...

First of all, I will say that I like the PCR1000 radio itself. It is a neat package. I intend to hang on to mine. The reception characteristics are really quite good for a radio of this size and price range. Of course, since Icom doesn't have to supply a hardware control panel at all, it ought to be a damn good radio at this price! And it is...

The thing that I found most distressing was the change in Icom's support policies relative to that provided for all of their prior radios in the amateur market. This is the first time they have tried to keep the software for the radio totally proprietary, attempting to lock all third party software developers out of the market. And I hope its the last! I doubt they could see the train coming - maybe it did indeed look like a light at the end of the tunnel! But I guarantee they knew it when it hit them!

I am far from being alone in my criticism of Icom for this policy change they tried to force upon their customers. I bought into the Icom image - thinking they were an aggressive and progressive company who I believed had "built a better mouse-trap" than the Winradio. So you see, I came to this party all geared up to enjoy myself with this radio and have a good time. But when problems came to light Icom became a party pooper extraordinare!

Below are the things I think diminish the radio's value. All (or most) are things Icom could remedy overnite if they would simply choose to do so. But I assure you that after months of attempting to get them to act, they won't. Or can't.... I would love to be found wrong!

1. The radio has an EEPROM containing 128 bytes of data, which among a few other things is used to store alignment settings for the various readings (S-meter, bandscope amplitude, centering and sensitivity of the AFC, etc.) across the various internal bands of the radio. There have been more than a half dozen of us who's radios lost these settings for unknown reasons. [Well, Miiquel (in Spain) sort of shot himself in the foot with some homebrew software...] But the rest of

us lost our EEPROM settings without a definitive cause. Icom speculated that it was due to use of "third party software". I believed that at the time, but now it is a mute issue. Patrick Massota created a neat utility which can backup and restore the EEPROM data at will. This is a utility that we (users on the PCR-1000 mail list) repeatedly asked Icom to produce, but our requests went totally ignored. Well, they did say at one point that they saw no need for such a utility... But everyone involved knew they were just blowing smoke up our rear....

2. The Icom software has a very pretty interface. But underneath the surface it is not as functional as a scanner in this price range should be. They advertise it as 1000 channels with the further qualification that actual number of channels is only limited by disk space. Well..... I defy you to get the Icom software to scan more than 50 programmed memory channels at a time. It won't. But they don't tell you this. Using their rational, I can store a hundred million channels on my 13 Gig hard disk without even owning a radio! But what the heck does that have to do with anything? The radio is in fact a 50 channel scanner using the Icom supplied software. They should be ashamed to advertise it the way they do.

3. The software also lacks any provision to blockout birdies or unwanted frequencies (such as pagers) duing a frequency range search. I've owned quite a few scanners, but never owned one before that lacked this capability. This feature is often included in the cheapest handheld scanners, and would be incredibly simple to do in their software if they had a mind to do it.

4. In using some of the third party software that has emerged supporting this radio, I have found other areas where the Icom software could be improved. For example, how hard would it be for Icom's software to allow you to sort memory bank data? Or give you an easier way to save a displayed VFO channel into any bank/channel of your choosing. Or eliminate the necessity of 'clicking' the mouse on the tuning knob just to allow you to type in a frequency? Some of these sound like knit picking, but when compared with other "third party" software, the Icom software shows some real opportunities for improvement.

I'm writing this reply from memory, so I may well have left off some major points. Basically my advice would be that if you like the radio....

1 . Buy one I've heard people say they bought one for well under $500. I paid $499 for mine back in January.

2. THIS IS IMPORTANT! Download the PCR1000BUR software and make a backup of the EEPROM data first thing. (search www.dejanews.com for the URL)

3. Get some good third party software that supports the radio and enjoy yourself! ScanCat Gold for WIndows (I have NO affiliation with them) is very feature rich - but perhaps not as 'pretty' as the Icom software. I like it though. And there is a neat 'freeware' program called PCRScope that you really ought to try. Other software is available but I have no experience with them at this point.

Just be sure you have your original EEPROM data settings safely backed up and stored in several safe places - just in case your radio burps up its EEPROM data like some have. Icom has said that they will start treating EEPROM corruption problems the same as a 'hardware modification' (thus voiding the warranty) although to the best of my knowledge they have yet to enforce this policy.

If/when you get one, join the PCR-1000 mail list at www.qth.net and keep everyone posted of your discoveries. There are well over a hundred folks on the list now, and all are friendly and helpful.

Yours truely,
John McDermon, KE4VAL

1250. Tips to filter the crap in this n.g.

If everyone adds these to a kill file or filter list, we will all be better off and Please, don't fan the flames by replying to them or even complaining about how bad this n.g. is. We can all see how bad it is. I left 2 years ago because of it, and nothing has changed.

I did a non-threaded sort of all the messages in this n.g. based on the 'from' column. The following people have been added to my filter list and no longer show up.

Criteria: These people 1) post a lot, 2) virtually never post on topic 3)just flame each other over Cheek/MacKey issues. I know Bill posts ON-topic a lot also, but it isn't worth wading through the crap he posts.

I use Outlook Express and filter is very easy. Some of these are partial "from" fields, but that is all that is required for O.E. I'm sure some will change their names, but my list has lots more room on it. It is sad these people are intent to ruin a good thing.

It depends on the frequencies. You should have no trouble with the
airport frequencies. The frequences in the low bands, 32-34-36 can be heard
for over a hundred miles. The frequencies that fire departments and some
police departments use (154-155) can usually be heard for about 50 miles. The
high bands (460-480) can only be heard for about 25 miles or inside a
particular city in some cases.

1253. PRO-2035 / Opto OS-535 CODE TO UNLOCK

PALM BEACH COUNTY FREQUENCY DIRECTORY AND SCANNER LISTENER'S GUIDE

"Your book is OUTSTANDING"
- Palm Beach Sheriff's Office deputy

Tired of outdated lists? Tired of buying a frequency book only to find that it reads like a phone book? Tired of not knowing the correct frequencies to listen to?

Well, no more! Containing the most accurate frequency information available on Public Safety agencies in Palm Beach County, FL, the is THE scanner book you need! Included in this Second Edition:

- Frequencies for FIRE, POLICE, EMS, PUBLIC WORKS, MEDIA, BROADCASTERS, AIRPORTS, and AMATEUR RADIO.

- Frequencies are listed in two sections: by SERVICE and by FREQUENCY

- Detailed information, with receive & transmit frequencies, complete channel descriptions, CTCSS codes, and FCC callsigns

- A comprehensive listener's guide, with information on which agencies cover the various cities, which channels are used, 10-codes, signal codes, Sheriff's Office district maps, EMS district maps, MED-COM Radio system, PBIA runway map, Florida Scanner laws, and a huge glossary of radio lingo & terms.

- Now includes a Trunk Tracker (TM) section, with frequencies and ID's for the Public Safety trunked systems in the county

- PLUS, included with each book is a condensed frequency list, a 1-page list of ALL Public Safety agencies in the county, including Trunk Tracker (TM) codes. Perfect for portable use!

Whether your're a resident of Palm Beach County, or just a visitor, this is what you need for complete Public Safety monitoring!

Only $9.95 including shipping.

SPECIAL OFFER! Buy the Palm Beach County book and South Florida Trunking Guide together for $17.95!!

E-mail me for ordering information (remove the NOSPAM from my e-mail address).

SOUTH FLORIDA TRUNKING GUIDE -- UPDATED VERSION NOW AVAILABLE!!

"This book is definitely one that you want to include in your scanning library"
-- Warren Whitby, operator of the Trunked Radio System User's Page at http://members.aol.com/wwhitby2/trs.html

Containing the most accurate frequencies and Trunk Tracker (TM) ID's for the Motorola trunked Public Safety agencies in South Florida from Indian River County south to Miami.

Trunked systems covered include:
- Broward County (BSO, Fire-Rescue, all Local Government)
- Broward County School Board
- Fort Lauderdale (includes Pompano Beach, Wilton Manors, Oakland Park)
- Coral Springs (inlcudes Parkland)
- Plantation
- Deerfield Beach Fire-Rescue
- Margate Public Works
- West Palm Beach (inludes Riviera Beach, town of Palm Beach, and Palm Beach Gardens)
- Boynton Beach
- Miami
- Miami Beach
- WTVJ NBC 6 TV

Other non-trackable trunked systems are also included with frequencies and general information:
- Indian River County
- St. Lucie County
- Martin County
- Hollywood (ETRUNK infomation included)
- Miami-Dade County
- Coral Gables
- State of FL ASTRO digital system

Also includes operating tips for using and getting the most out of the Trunk Tracker (TM):
- Descriptions of trunking systems used today
- Comparison between the Trunk Tracker (TM) models
- Undocumented bugs
- Converting Motorola (TM) talkgroups to Trunk Tracker (TM) format
- Sources of information and help
- "Keyboard tricks" not listed in the manual
- Setting up Type 1, Type 2, Type 2i, and Hybrid systems

Latest edition is the 2nd edition mid-year update.

Only $9.95 including shipping.

SPECIAL OFFER! Buy the South Florida Trunking Guide and my "Palm Beach County Frequency Directory" together for $17.95!!

E-mail me for ordering information (remove the "NOSPAM" from my e-mail address to send mail). Please let me know you saw this on the internet newsgroup.

It also depends on weither the agency being listened to is using a repeater
or simplex. A repeater on a good mountain top can be heard for well over
100 miles on most any frequency. Simplex is line of sight and it's ragne
varies depending on terrain.

My local police department uses a 150mhz repeater and I can hear it 80+
miles away, and it's not on a tall mountain.

Hope this helps...

900,
>it's not.

That's NOT the reason the Trunk Trackers can't track 900-MHz. They do not care what the input frequency is, only the Motorola radios do. The reason it does not track 900-MHz is because of time contraints in getting the Trunk Trackers to market, and because there wasn't the hue and cry as there was for 800-MHz systems. Currently there are no Public Safety agencies in the U.S. using 900-MHz trunking.

BTW the band split in the 900-MHz is 39-MHz.

The PRO-90 can pick them up in conventional mode, it will not track
trunked systems in any band other then 800mhz.

The resident village idiot Toilet Boy aka Mackloon aka Macktard
aka Smacksie aka John Mackey has been identified as a Usenet
abuser again.

Joe Greco of sol.net Network Services has identified Mackey for the
fourth time this year. His criteria in how he determines and rates
the offenders is listed before the data. I've showed the data for
the other three occasions as well.

When you stop to consider this report deals mostly with cross posted
spam from pornographic web site advertisements, get rich quick schemes,
and the like, it's quite a feat for a single individual to post
enough garbage in one or two newsgroups to get noticed and make a
place for himself on the list. Many times Mackey has claimed that
others post more trash than him. This report confirms that the
inaccuracy of his statements.

And, who says Mackey hasn't found his niche in society?

-------- Here is Joe Greco's report --------------------------

This data has been gathered by Joe Greco and sol.net Network Services
as part of an ongoing project to monitor Usenet trends and abuse.

There are currently two items scanned:

1) "From:" header
2) "NNTP-Posting-Host:" header, if present

All articles sharing the same header (i.e. all articles with a
"From:" header of "jgreco@ns.sol.net") are counted together, with
a summary of the number of posts, bytes posted, and BI. Only
articles that have a BI of 20 or greater are summarized.

Please remember that BI is a general formula to measure the
number of groups posted to in a manner which favors crossposting.
The fact that the posts of a single poster may have a BI of 20
does not imply that the articles are spam, as each article may
have been completely different and unrelated.

Automated data gathering mechanisms have collected the data presented
in this report.

While this information is considered to be relatively reliable, it
should be noted that problems do occur and the data gathered and
reported might not actually represent an accurate picture of reality.

This information is provided by the author "as is" and any express
or implied warranties, including, but not limited to, the implied
warranties of merchantability and fitness for a particular purpose
are disclaimed. In no event shall the author be liable for any
direct, indirect, incidental, special, exemplary, or consequential
damages (including, but not limited to, procurement of substitute
goods or services; loss of use, data, or profits; or business
interruption) however caused and on any theory of liability, whether
in contract, strict liability, or tort (including negligence or
otherwise) arising in any way out of the use of this information,
even if advised of the possibility of such damage.

And so on, and so forth. Now, here's the music.

Channel 86 on MobileComm paging is 931.1375. They also use Channel 115 and
a new channel called PCB. All are Alpha-Numeric and digital and statewide.

Hope this helps...

Mike

1282. Yupiteru MVT-7100 Multiband Scanner/Receiver

Newsgroup: rec.radio.scanner
Date: 1998-08-07 00:00:00 UTC
From: av391@FreeNet.Carleton.CA
Message-ID: <6qemcq$svb@freenet-news.carleton.ca>
Source record: 148784

Yupiteru MVT-7100 Multiband Scanner/Receiver

- frequency range from 530kHz to 1650Mhz in receiving modes:
Wide FM, Narrow FM, AM, LSB and USB (including cellular band)
- twelve frequency steps can be selected
- 10-band search function
- 1000-channel memory
- comes with car connector, hand strap, belt clip, earphone,
original box, owner's manual and original receipt
- purchased in November 1996: used no more than 25 hours
Price: $500 CANADIAN CASH FIRM

Originally paid over $900 from Atlantic Ham Radio. This was the
second model from the top back in 1996. It was hardly ever
used (practically brand new). Yes, from the above frequency range,
you can receive all analog cellular conversions!

Serious inquiries ONLY. Located in Toronto. Leave a voice number
if interested.

You didn't say how much you wanted to spend, but in my book, you can't beat the Yupi MVT-7100 for a mere $300 (actually a few bucks less in some places). It's a helluva scanner for the money.

I was so impressed by the 7100 that I ordered a Yupi MVT-9000 recently. I can't wait.

Hi all,
I've been scouring the net trying to find some keypad tricks for my Bearcat 220xlt, but so far no dice. I was wondering if anyone could be so kind as to either point me in the right direction or e-mail me a list of keypad tricks. The frustrating thing however, is that I have SEEN a reference on a website for the 3000xlt to a certain trick for the 220xlt that tests each of the LCD segments in the display in turn, so obviously there has to be some tricks for this scanner!

Cheers,

Toogs

Ref: Icom

As a satisfied customer of Icom. I find these complaints
a bit picky. If one has had anything to do with the Ham
Radio world, you will know that there are members of
that fraternity that are dissatisfied with about everything...
Kenwood, Tentech, Icom....you name it.

The point of all of this is that one should be aware that
most companies will not necessarily "be at your beck and
call" as you think they should.

I have been extremely pleased with the PCR-1000. My next
project is the DSP option...which I should acquire in about
a month or so.

So, if you are contemplating getting a PCR-1000, then do so!
It is a fine receiver, and a trend that reflects what is coming up
in the future. Just think of the options in the future...trunk
tracking, etc.

I sold my Kenwood R-5000, a fine old receiver, to purchase the
PCR-1000...the ICOM has been a pleasure...a good move, I
think. BTW, do try to make sure your PC monitor is shielded as
well as your PC power supply. Make sure it meets FCC requirements
in terms of EMI, RFI radiation. Some cheap PC components radiate
like a 50KW radio station!

Leonard...

P.S. My Icom experience has been simple...I bought it, hooked
it up...and have been listening and enjoying it ever since...

Ive been using Pro Turbo for a few months now. It is a great program which completes the marriage of the 2004-5-6 ,Ce-232 and computer. It is very intuitive. I have tried alot of other software and prefer PT. most other software is designed to handle as many different types of radio as possible. This makes sense if your in it for the bucks only.But a program designed for a single scanner series has the distinct option of giving you a user interface very similar to the actual radio you are used to. When PT comes up its like looking at a 2004-6 with some extra features. Once you have it configured for say: scanning, lookup (which puts notes on the screen pertaining to the freq that is hit),auto log, s-meter, then you can close the tool section at the bottom THEN you can turn off the keypad portion.Now all thats on the computer monitor is the Freq display with the look up notes and a couple extra features. So in my opinion, if you are looking for a radio/computer package which does it all yet is simple to understand then this is it.

I am in NO relation, nor do I profit from this program and its writer. I paid my $50 like everyone else.

Thanks, Ira Cooper

Sure, a couple:

Sony ICF-SC1PC
Icom R-10
AOR AR8200 as soon as it gets type acceptance

Maybe a couple of others, but that should be a good start!

Best regards,
Dave

Aircraft communications are line of sight only. You will be able to pick up transmissions form the aircraft. Transmissions originating on the ground will be difficult to receive unless you have an unobstructed line between you and the transmitting source.

Also the BC3000 does mil air, but is not always clean in that band so you can get images sometimes. I like Uniden scanners for the Mil Air band because they search/scan so fast. There is a lot of area to cover and most scanners scan so slow that you miss all the traffic.

Most likely, yes, unless you have too many
hills and/or buildings between your listening
post and the airport.
You may find that you hear the transmissions
from the aircraft better than those from the
airport. That's because of the huge height
advantage that the planes have!

Best regards,
Dave

1325. FS: Pro-60 w/charger/nicads/ac/etc $150

Newsgroup: rec.radio.scanner
Date: 1998-08-07 00:00:00 UTC
From: rbatina@infinet.com
Message-ID: <7Bsy1.688$q5.12181421@news2>
Source record: 148850
Cross-posted to: rec.radio.scanner,misc.forsale,misc.forsale.non-computer,alt.forsale

For Sale ($150 shipped):

Radio Shack Pro-60 / 200 Channel / 900mhz / Handheld Scanner & Accessories

Comes complete in it's original box, with instructions, NiCad battery pack, charger/stand, AA battery adaptor, antenna, AC adapter, and charger instructions. A complete kit for AA battery, NiCad, or AC outlet usage.

Features:
200 Channels in 10 banks of 20 frequencies
Triple Conversion to reduce interference
AM/FM/WFM Modes with override feature (Allows you to listen to FM 88-108!)
NiCad Charging Circuit - recharge the batter while inside the scanner

Coverage:
30-512 mhz - with NO GAPS!
760-824 mhz
849-865.9875 mhz
866-869 mhz
894-999.9875 mhz

This scanner covers more than a lot of other scanners, most notably being it's ability to receive the FM Television audio channels as well as the 'regular' broadcast FM stations that you can hear on your car or home stereos. This is a nice feature when the scanning gets a little dull and you just wanna listen to some tunes. :)

The Pro-60 also allows you to listen to: VHF Low, 6 Meter Radio, FM TV, Land Mobile Service, FM Radio, Aircraft Band, US Government, 2 Meter, VHF High, VHF Wide, 1.25 Meter Radio, Military Aircraft, UHF Low, UHF Wide, UHF T Band, Conventional Systems, Conventional/Trunked, Public Safety, Trunked. All of that info is taken directly from the instructions.

So, this will get pretty much any fire, police, highway patrol, auto racing radios, business radio, government/public aircraft, amateur/ham radio, family radio service, sherrif, DOT/city vehicles, cordless phone, baby monitor, fm radio, tv radio stations that you want to get.

All of it is in nearly new condition, and I'm sure you will be very happy with it once you receive it. All for only $150 shipped via Priority Mail.

Thanks

The Pro43 would suck in signals if it were hooked up to bamboo pole, I'm convinced. And while most indoor handhelds would be jammed by a computer monitor, I can sit my Pro43 (with its whip) on top of my SVGA and catch the AWACS acft aloft over the Atlantic.

Probably because "OBFD" got kicked off AOL
before his free time was up. So Mackey can't
go back there now and make it look good. Also,
once a screen name is used, it can't be reused,
even if the cat is no longer there.

So even if Smacksie finds a new freebie trial
for AOL, he can't use the OBFD name again.

Ha ha ha ha ha ah ah ah! <Ohhhh my sides!>

Now just wait...it's a matter of time before
we hear from OBFD@kickass.com or some such.

Ha ha ha ha ha.........

read strong signals page review.the aor 8000 still beat the 8200. sensitivity is better than the 8200.the only major advantages that i see is the size, larger screen, better button controls and positioning, and the addition of the 33.3 mhz step for future air band step size.(this scanner is not worth my invest ment.) if i were to decide today i would put more money aside and wait for this aor 7000 that ive been hearing about.

Hi Brett,

I got my trucktracker nearly a year ago and I'm still the only person posting anything on trunking in Utah. I have tried (without sucess) to listen to BYU, the mountain between us keeps me from hearing it.

I do have some info for several Salt Lake County trunked systems if you're interested. I have fleet map info and talk group ID's for SL County's 20 channel system, SL Airport Authority and Salt Lake City.

The SL Co Sheriff will be moving to the trunked system sometime late this year or early next year. I have it on good authority that Provo City Police will also be moving to a trunked system soon.

Let me know if you need any info for Salt Lake County.

Happy trucktracking,

Jon

Well John Mackey , When are you going to admit to yourself and the others that you made up the story about Bill Cheek as the evidence below shows. All you do is lie and then make more accusations when people bring out the truth about you.

Come on John, you know that you want to do the right thing and admit the truth as it would make you feel better about yourself and would take the stress of living a lie off of your shoulders.

1364. Relm HS-100 Wont search....

Newsgroup: rec.radio.scanner
Date: 1998-08-07 00:00:00 UTC
From: Aaron Ceraldi <ceraldi@albany.net>
Message-ID: <6qe0jrqpj1@news.monmouth.com>
Source record: 148889

Anyone have any experience with thr newer Relm handhelds? (the 100 and the 200 I think are the same exept no ctcss or dcs and not as much coverage) I cant get my HS-100 to search... I made a good trade :-) for a bc-60 XLT he likes the 60 and the 100 is A nice back up radio, but I cant get it to search, Ive used every posible method I can think of and I also dont have the instruction booklet... It scans perfect and is fast, just wish I could search with it, Cause If I Drop it at an airshow or a cop confinscates it Id rather have it be the 100... and not my MVT-7100 :-)

Thanks in advance,
--

Now you see why a lot of experts use dedicated PC's to
power their Pro20xx/Opto combos :)

If you have a PS2 mouse-port on your PC's motherboard,
you can connect your mouse there. Then use COM1 for the
Opto456 computer-interface. If the PS2 interface is not
connected (but your motherboard is capable) you will get
it for 5$ at your average dealers.

Please remember that you can _not_ use COM3 or COM4 if
you allready use COM1 and COM2, since COM1-3 and COM 2-4
work in pairs. (i.e. they are physically the same ports,
but with different access-addresses...)

Regards,
Knut Otterbeck

click here: http://www.streetsmartsecurity.com/CG.htm

http://www.clifford.com/acg.html
http://www.clifford.com/valet.html
http://www.clifford.com/scanners.html

for more information go to http://home.netscape.com then
search for "code grabbers" "auto security" "home security" ect.

If a thief uses a "Code Grabber" he has access to ANY electric garage door,
unless...its protected by Street Smart Security

If you have an electric garage door, a thief can remotely open it at any
time...

[Image]With a "code grabber," anyone can open your electric garage door. A
safety device from Street Smart Security ensures that no thief will be able
to open your garage door, protecting your and your family!

It's 9:00 a.m. and you've just pulled out of the garage. You point your
electric garage door remote to shut the garage door and drive off to work
and hope you don't run into any traffic. Meanwhile, a thief is parked a few
hundred feet away from your house watching you leave. He drives up to your
house, points a "code grabber" at your electric garage door and it opens.
He now drives into your garage, shuts the door and goes into your home. Are
you at risk? If you have an electrical garage door you are. A new
protection device - the Code Rotator- will prevent thieves from opening
your electric garage door.

You're at risk. If you own an electrical garage door, a thief can break
into your home. Every hour of every day, thieves around the world are using
a device called a "code grabber" It gives them the code to your electric
garage door and unrestricted access to your possessions and family. Since
the device can be used from hundreds of feet away, you will never know when
a thief is using it.

How does a "code grabber" work? When you leave your home and activate your
electric garage door to shut it , you're are actually transmitting a code
to a thief with a "code grabber". He can re-transmit your code to the door
and open it. It's like having a key to your house.
****

Burglars use "code grabbers" to open electric garage doors and break into homes...

A "code grabber" is a device that can record and play back the signal produced from your garage door remote control. It has grabbed your private, secret code and revealed it to a burglar. One of the things that makes a "code grabber" so dangerous is that a criminal can sit comfortably hundreds of feet away from you when you use your garage door opener and still grab your code. The "code grabber" duplicates the signal you just used. The thief can re-transmit the signal just captured, drive into your garage, close the door behind him- thus giving him easy access to your home, your valuables and your family from behind the security of your garage door. Even worse, if you are unaware that the burglary was the result of a "code grabber" the thief can return within a few months to steal whatever your insurance has replaced. He has 24 hour a day access to your property.

Where do thieves get "code grabbers" and why haven't they been publicized?

"Code grabbers" are sold out of the back of magazines and can be made from parts available at any electronic store. Police departments nationwide are aware of these devices but hesitate to give them even more publicity for potential criminals.

Anti-CodeGrabbing (ACG):

Ever hear about someone's car being silently stolen in the middle of the night even though they had an alarm and it was armed? Although some simple alarms can easily be defeated without making a sound, that's nearly impossible with a properly installed modern vehicle security system.

So how do they do it? Code-grabbing.

When you press a button on a car alarm remote control it transmits a digital code matched to the alarm control unit that is hidden inside your car. It's like a tiny radio station that plays just one particular song. When the alarm control unit inside your car receives that particular code (or "hears that particular song"), it will change state from armed to disarmed or vice-versa.

Each and every non-ACG car alarm remote control broadcasts a single digital code that was selected by the alarm factory from a possible universe of anywhere from a few thousand to a few trillion code possibilities. Although there may be trillions of possibilities, every non-ACG remote uses just one code every time.

For a while, thieves began to use code "scanners," electronic devices that would rapidly transmit each code possibility one right after the other. But today, virtually every alarm has some form of anti-scanning. So code scanners are now useless. Meanwhile, some not-too-honest person came up

with the idea that if you use a receiver and digital recorder, you could capture the secret access coding of a cellular phone each time it makes a call. You could then play back that data and make free calls that were billed to someone else.

Then some thief asked himself, "Why steal just a few hundred dollars worth of cellular phone air time, when I can apply the same technology to stealing a few hundred thousand dollars worth of cars?" Voila, code grabbing was invented.

A code grabber cycles through each of the various alarm frequencies several times a second. When it finds digital information on a frequency, it records it. When the driver is gone, the thief just plays back the recording. The alarm thinks the rightful owner has returned and it disarms and unlocks the doors for the thief! Car thieves don't even have to carry slimjims anymore. Like illegal cable TV black boxes, code grabbers are often sold via mail-order for a few hundred dollars, no questions asked. Although some states have outlawed their use, there are no laws against owning a code-grabber, just against using one in the commission of a crime.

Clifford Electronics was the first company in North America to invent and market vehicle security systems that are impervious to code grabbers. Clifford's unique ACG technology uses complex mathematical formulas to actually change the transmitted code every time you use the ACG remote. A code grabber can still grab the code, but when it's retransmitted, the alarm ignores it because the alarm knows that once a code is used, it will never be used again.

The Valet Mode Problem

All remote controlled car alarms have a "valet" or override switch that allows the vehicle owner to turn off the alarm and bypass AutoArming for servicing, valet parking, etc. In addition, if the alarm is malfunctioning, or the remote control isn't working, putting the alarm in valet mode will instantly turn it off. To put an alarm in valet mode, all you do is turn on the ignition and flip the hidden valet switch.

The problem is, all a thief has to do is hotwire the ignition and flip this "off" switch. Although alarm installers do their best to hide the switch location, by necessity it must be placed within reach of the driver. A quick glance under the dash, around the seat and in the glove compartment is all it takes.

To counteract this weakness, Clifford Electronics developed the UltraSecure Coded Valet Mode that is impervious to this common theft tactic. Clifford systems that are so equipped have a PlainView Coded Valet Switch. Rather than just flipping the switch to place a Clifford system in valet mode, the

authorized driver enters a numeric code that he or she has selected. It's just like the PIN code you use at an automatic teller machine.

Without the right code, the thief is out of luck. And even if the thief tries entering codes at random, the Clifford system will recognize the random attempts, immediately activate the alarm, and ignore any further guesses. Even if the thief were to stumble upon the correct code, the system would not accept it.

Since it requires a code, there's no need to "hide" the PlainView rocker switch under the dash. This attractive little switch can be mounted on the dash face or center console right in plain view. That makes it far easier to reach and use.

Anti-Scanning vs. Anti-CodeGrabbing,: What's the
Diff?

When you press a button on a car alarm remote control, it transmits a digital code matched to the alarm control unit that is hidden inside your car. It's like a tiny radio station that plays just one particular song. When the alarm control unit inside your car receives that particular code (or "hears that particular song"), it will change state from armed to disarmed or vice-versa.

For a while, thieves began to use code "scanners," electronic devices that would rapidly transmit each code possibility one right after the other. Sooner or later, the scanner would transmit the one particular code that would change the state of that one particular alarm. In the early days, alarm remotes (and even many of today's garage door remotes) used only a few hundred to a few thousand code possibilities. A scanner could run through a few thousand codes in a matter of minutes.

When code-scanning became a problem, Clifford Electronics responded by inventing the first car alarm remote controls that used a single code selected from a universe of more than 4.5 billion codes. That made electronically "guessing" the code virtually impossible. Since these codes were longer, a scanner would not be able to send as many per second. And since there were so many of them, it would literally take many years of scanning to go though even half the possibilities. Clifford also incorporated an AntiScan feature that would detect a continuous stream of codes, then would ignore the incoming codes for a few seconds. Then would listen again, then ignore, etc. Statistically, it would be nearly impossible to happen upon the specific code required and get it transmitted within an "open window." You also had to transmit on all the possible frequencies assigned to various alarm makers.

Today, virtually every alarm has some form of anti-scanning. So code scanners are now useless.

But today, there's a new threat: Code Grabbing.

1420. Car mount for BC 895XLT

Newsgroup: rec.radio.scanner
Date: 1998-08-08 00:00:00 UTC
From: bigron@i-cafe.net
Message-ID: <MPG.1036c8f56860592f989693@news.pon.net>
Source record: 148545
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm impatiently waiting for my 895XLT to arrive and have been trying to prepare my car for installing the radio. I went to Radio Shack and saw their version (minus some key features, like computer connectivity and CTCSS control) and wanted to see if their scanner was sold with a car mount and if not, I'd buy one. I struck out with both. They don't sell them with a mounting bracket or sell a mounting bracket for it. Their scanner was pretty darn light. I picked up the scanner and thought it was an empty display-only version, but the sales person said it worked and plugged it in and showed me it did work. I guess it is pretty empty inside by the weight. If anyone has any ideas on mounting it, please let me know. I want this to go as smoothly as possible. I have installed a power source straight from the battery to a small add-on fuse box underneath the dash and have run my antenna under the carpet to where I plan on installing the radio.

So, you support spamming?

It's not good that you are so narrow-minded and stubborn to think that all I do is make mistakes and provide misinformation. If you choose to think that way, you are mistaken. I've provided much more good information than compared to misinformation.

Only jerks like to see through the good sides of people and only look at their negative aspects. You, in fact, are one of them. You were helpful when I asked a question about cellular (although somewhat arrogant), but I now resent your entire existence.

1423. AR8200 Remote Control Interface available from Javiation... What does it look like?

Newsgroup: rec.radio.scanner
Date: 1998-08-08 00:00:00 UTC
From: "Stephen H. Fischer" <sfischer1@mindspring.com>
Message-ID: <6qjd9r$hs2$1@camel29.mindspring.com>
Source record: 148548

I found the following on the AR8200 Homepage

http://www.geocities.com/SiliconValley/Horizon/9163/ar8200.html

>--

>NEWS: AR8200 Remote Control Interface available from Javiation...
>I just received information that JAVIATION already has the AR8200 remote
>control option implemented in thier JAV232 interface (tnx Jonathan!)
>
>Quote from Jonathan from Javiation:
>Our JAV-232 is already compatible with the AR8200 - all you need is the
OS->8200 with a 3.5mm stereo jack or DIN plug and several customers who had
>JAV-232's are using these already. This is how I am currently controlling
he >AR8200.
>Javiation homepage with more info about the AR8200.

What does the OS-8200 look like?

I looked in the hole on the side of a AR8200 and realized that the
FFC (Flat Flexible Cable) for the AR8000 could be glued to a piece of
plastic and stuck in the hole of the AR8200, If the conductors are numbered
the same.

Please please tell me that I am wrong!!!

If there are pictures of any of the AR8200 cables available, please
post them somewhere and let up know so we can select the best of
this possible disaster in the making again.

So Bill how have you conluded it is ME?

You openly admit it is NOT the server I use!

You openly admit it is NOT the provider I use! (I have NEVER had
an AOL account, but YOU HAVE!)

The header on the message says it is Mozilla 4.05. I use
version 3.04. How do you explain the differences?

How do you explain it is ME?

I have a serial mouse on my second computer and I want to connect my opto board to com port 4 in Win95 since the mouse takes com port 1 and the modem takes com port 2. If I don't use the modem I should be able to use the radio. But my question is, is the opto equipped with jumpers to change the com port. I used it in the other computer on com 1 but can't on this computer. Win95 just shows the 2 com ports and won't even show com 3. Help!

K4CC wrote:
> What proof do you have that OBFD didn't get kicked off of AOL?

None! I never said I had any, I simply asked what facts the
statement was based on. Apparently there were NONE!

This reminds me of 4 months ago when I stated I was leaving Sprint
to go to MCI for my ISP. About 3 weeks later I did that & then people
tried to say I had been kicked off of SPRINT. I surprised them
by keeping my Sprint account active for about 2 weeks & occasionally
posting from there to prove those fools as liars!

I have an Icom R-10, but I am at a loss at times as far as the most effective use for it. It has a much slower scan rate than my other scanners, and it's only advantage (besides wide coverage) is the alphanumeric tags one can assign channels. I was wondering if other R-10 users out there had any suggestions, or would just like to say how they use theirs. Also, is the autoprogram feature any good for finding secret freqs in an area?

Mackey this is Poppa Dom again. I want to know why you not interested in being decent person to this newsgroup? I try be decent with you even if I dont like you much and you just talk to the people who kick you in the ass.

You don't have conversations with any body who wants to talk to you. You only play the childs games with the guys that molest you the most. Some body used to say you liked the hurts and the pains and I am amused with the joke. But I dont laught at that no more. Its true!!!!!!!!!!!!!!!!!! I did not think it was true once. Now I do.

You enjoy the hurts and the pains like them crazy nuts that like the leathers and the whips and the chains. I think those are called preverts or some shit. But you be that way it looks like and I think that is very crazy man. You nuts!!!

Or you are playing the games. Maybe thats it you are just playing the games because you are not serious about nothing. But even if that be true, it make you only much sicker in the head because no body else likes your games. Thats why you do it too.

You are one crazy bambino man or you act the fool may be because you dont no any better? I want you to be serious in sensible sort of way to talk to me because I life the police scanners and radios and wish that can be the topic of this newsgroup. Not your brain diseases and other body diseases that make the pimples grow inside of your head.

Poppa Dom told you that.

Gerald,
For information only... Javiation has reduced their price on the
MVT-7100 to 195 quid, shipping prepaid, delivered outside the UK via
FedEx. That's about $487 CD or $318 US. Your asking price is about
$327 US. Unfortunately with the introduction of newer models, the value
of the MVT-7100 has declined.
I'm speculating but I'd think you're more likely to get $375 CD to
$435 CD.

Sounds good to me but I want to add this one little condition for mackey only and mackey cannot ask anyone else to abide by the condition as it for mackey only. The condition is mackey can never post on the alt.radio.scanner or the rec.radio.scanner newsgroups ever again under his own name or any alias's he may want to and this condition does not apply to any other person on the newsgroup, just mackey

If you accept this one little condition mackey then we all can agree on the flames stopping.

You have a web site, don't you? How about setting aside some space for a forum or discussion group? If that's not possible, I'll give it a whirl but I have limited time and probably won't do a decent job of it!

>By the way is there anyone out there in the US that has ordered from Bandercom before? How
>long did it take for them to ship to you?

Yes, I have. It took about 8 days to get the last scanner (I'm in Massachusetts). Based on what others have said, a two week wait is not unusual, from the time the scanner is actually shipped. I'm not sure why that's so but the operative word is "patience," I guess.

I bought mine from HRO for that price. I use it primarily as a scanner. Scan speed is rather slow but useable.

Sensitivity is quite good, although the antenna is poor. Does get some intermod in high RF areas but overall I would rate it as very good.

Hi:

Looking for a used mobile scanner, loud audio, that covers the 500mhz band. I'm in the central New Jersey area, and would just like to pick it up. Please e-mail, price, and location..

Thanks
Bill

Michael and others,
There is already a Yupi mailing list at www.qth.net
Subscribe when you get the chance and let everyone know
what you think of your new "toy".

And for anyone getting the 9000, be sure to stop by
my MVT-9000 page and download the Text or PDF version
of the Owner's Guide I wrote for it.

There are actually two radios...the OptoCom (not yet FCC approved)
and the OptoTrakker (which is the model usually seen in the Opto
ads in PC and MT).

>scanner users out there experiencing this problem???

It happens with my BC-235xlt on Kodak's Type IIi system here in Rochester, NY. A while back, somebody posted info about a restart sequence for the scanner that would override some Motorola system parameter and clear up the clipping. After doing the restart, the scanner has to be reprogrammed all over again. I haven't taken the time to look up the info since I started having the problem, so I can't say whether it works in my case or not.

Maybe somebody will repost the info or put up a pointer to it.

> Isn't that like when Fun-Boy drops his drawers, and gets rid of his
> paycheck? ;-)

To be exact about it, he's a Mobias Strip.

Cut a strip of paper 1/2" wide and 8" long or so.
Hold it flat, one end in each hand, and then twist
one end 180-degrees and then glue or tape that end
to the other end. It will resemble a loop if you
do it correctly. Ohhhhh, but it's much more than
a mere loop now!!!

It's now a classic paradox called a Mobias Strip.
It has exactly one side and one edge, and bends
back upon itself in a vicious circle. Test it for
yourself. Put a pencil on the strip anywhere, and
start drawing a line as you move the pencil down
the center line of the strip (like a highway center
line), without ever lifting the pencil from the paper.

Keep going. In a while, the pencil will come back
to where it started, and the line will be continuous,
all the while NEVER having crossed an edge or a side.

The same works on an edge, too. What looks like a
left edge and a right edge are actually the same edge.
Take a colored marker and start coloring an edge.
You'll see there is no place for two colors.

Likewise, what appears as a top side and a bottom
side are the same side. It's a paradox.

Mackey is like that. He peeks out of a dirty
window just beneath his belly button. He has

no beginning and no end. He is a master of the
circular logic. He neither eats nor excretes.
He is the epitome of a self-sustaining, totally
closed system. Neither input nor output are
possible.

But, thanks to a particularly violent flatulent
explosion one day, he has no brain left.....it
got ramjetted down what once may have been a
spinal column. It may still be circling inside
of him for all we know.

Ummmmm....he's a Mobias Strip, a living abomination
of the Laws of Nature......

Uniden continues to offer repair services for some Regency scanners.
It's all at flat rate. Go to http://www.uniden.com and follow the
links. I've used them for some of my Regency and have been pleased.

Also G&G at http://www.iinc.com/ggcomm/ has a good reputation, however
I have never used them.

>Anyone know how to set jumpers on the opto456 for com port 2?

Dave

The jumpers only configure the boards baud rate. The software you are using will have to be configured for com2 and the opto board will have to be connected to com2 on your computer. The opto board doesn"t care what com paort it's connected to as long as the software is properly configured.

I have one. It is really small, about the size of
my pager. Haven't tried the Yaesu software as my local dealer is out, and
tells me a new version is on the way. The radio has been out
for about a year. There are several firmware versions 102-106. The first
versions are modable for cellular recieve but not the last and the ones next to
the last without alot of difficulty unless you have the software. There is a
web page with all the details just do a search and check it out.

Sorry thats about all the help I can give you untill I can try out the
software.

WRTH = World Radio Television Handbooks

I have a number of WRTH volumes that I got as a lot. All are in good condition. Most show that they were used and a couple of them have a turned corner or two or signs of having a corner turned on the cover. As best I can tell there are no defaced or missing pages. Ask if you are interested in more detail on the condition of specific ones.

Each is $7 sent USPS Book Rate without insurance. An additional $75 if you want the package insured or $1 more if you want it sent Priority Mail.

Seeking input from those who use the:

UNIDEN BC 9000 XLT SCANNER

While grateful for any of your input, I am particularly interested in those who:

- Are Public Safety users
- Have a CTCSS tone board installed
- Use the radio in an RF intense environment

Again, any of your opinions are appreciated. Due to the clutter of this newsgroup, it might help if you e-mailed your response as well as posting it publicly.

Monitor Safely!

Mackey,
I`ve told you before & I`ll tell you one more time, I HAVE seen Mr. Cheeks credentials, ONLINE, verified them to be true to my satisfaction ! Don`t blame ANYONE but yourself if you didn`t want to look at them. I`ve done enough research on Bill that I now know more about him then I do my own uncles.
If YOU want to impress anyone, try the honest way. Tell us about yourself. The good, the bad & the ugly. Mr. Cheek did. Hell, he`s not HALF the trouble-maker that I was. OK, so he wasn`t an angel. Who is? YOU? ME? Don`t think so, pal. I`d bet that even Mother Treasa had SOMETHING that she didn`t want people to know `bout.
The main thing is, Bill was up-front `bout it. The good & the bad. All online, right here for the whole world to see. I don`t see you offering anything other then noise.

Tell ya what, if you don`t want others to know your history, you can E-mail me, (yes, I WILL keep it to myself) & if you check out the way you clame, I`ll be the FIRST to back you up !
If not, well I guess it`ll be between you & me & I won`t say a word `bout it.

Whatcha think? Deal?

--
Happy Scanning,
Charlie

Looks like your holding the bag now that the truth has come out about you making up the warrant story. You can deny it , but the proof has been posted and you can no longer hide by saying you don't know if there is a warrant. You know there is not because you made it all up to slander Bill.

1527. Re: ICOM Information (PCR1000 addendum)

Newsgroup: rec.radio.scanner
Date: 1998-08-08 00:00:00 UTC
From: Miguel Puchol <mpuchol@eurohubner.com>
Message-ID: <6qg3rh$l5h$1@talia.mad.ibernet.es>
Source record: 148707

Leonard,

Thanks for sharing your views with us. I will now make some assumptions, which may be wrong:

1. You use the radio to listen to shortwave mostly, so you don't really need the scanning side.
2. When you do, you listen to about 3 or 4 frequencies, so you don't need to link banks, etc.
3. You have loads of time to spare, as you can easily spend an hour programming a single file
for your PCR.

Now with the replies.

>As a satisfied customer of Icom. I find these complaints
>a bit picky. If one has had anything to do with the Ham
>Radio world, you will know that there are members of
>that fraternity that are dissatisfied with about everything...
>Kenwood, Tentech, Icom....you name it.

Everyone has problems. It's just that the others seem to respond to them. Not one of the 7 Yaesu rigs I've had has had one single problem.

>The point of all of this is that one should be aware that
>most companies will not necessarily "be at your beck and
>call" as you think they should.

Well, then they should not complain when they go bankrupt because their products don't sell thanks to poor costumer support.
In today's world, where thinks are not built to last 20 years (i.e. read "plastic"), customer service is about 75% of your problem. You can sell thousands of items, and not test them properly or leave things unchecked, but then you HAVE to expect a 50% return rate. That's just how you want to market things.

>So, if you are contemplating getting a PCR-1000, then do so!
>It is a fine receiver, and a trend that reflects what is coming up
>in the future. Just think of the options in the future...trunk
>tracking, etc.

It has been about 10 months now, and this is the situation so far:

1. Only one minor update to the software was released, from V1.2 to V1.3, and it just fixed a problem where the toolbar didn't want to stay off. It added a scan dropout problem, where a comms error occurs every so many seconds, and you have to restart scanning. Now it's annoying if you scan,

say, 410 to 430, and you can only get as far as 415 because comms errors occur, and when you hit 'Prog' again, it starts back at 410 MHz all over again.
2. No moves as to trunk tracking, etc. have been even rumoured, as far as ICOM's software goes.
3. No moves as to trunk tracking, etc. have been made by 3rd party manufacturers, thanks to ICOM's policies regarding the protocol.
And so on...

>I sold my Kenwood R-5000, a fine old receiver, to purchase the
>PCR-1000...the ICOM has been a pleasure...a good move, I
>think.

Well, your choice. I am now thinking of selling the PCR to get an Optocom, a much more supported radio, with a fully open protocol, and from a company that listen's to customers.

Best regards, and enjoy your radio,

Mike

The discriminator output is the raw audio signal before any audio filtering. It is useful for feeding into data decoders of various types, such as weather fax, pager decoders, etc. Most scanners can easily be modified to provide a discriminator out jack.

mackey writes a decent nice worded message to cheeks about a technical
matter
that would apply to the subject of this newsgroup and the FAG BILL
CHEEKS
reponds back calling childish name and acting like an asshole as usual.

now we see who the real problem here is: BILL CHEEKS

what a buttwing cheeks is!

And This Little Mackey Went "HeHeHe" All The Way Home <KAOSSF@parg.org> writes:

>Wrong, I'll do it as long as Cheek is willing to agree to it also!

Let me say this once again, slowly. Take that
crayon out of your nose and cinch up your diaper
and see if you can comprehend ...
I did not make an offer to Cheek.
I made an offer to you.
You refused to accept that offer.
It's that simple.
I offered you a deal between you and me, and
you refused to accept it.

1547. Re: An Offer For Mackey

> good money to do so. Any recommendations on features and specific
> portable models would be appreciated.
>
>>>>>Ok,
The first piece of advice I can give you is to forget about a scanner,and look into a ham HT.I use my old Icom 24at for listeng to Detroit PD on 453MHZ,(about 55 miles),and for trains.I've never had any intermod on it except from cell towers.It is awsome hooked up to a magmount on my car.I've never seen a scanner that is even in the same "universe" as the 24at.I know the W2 is pretty much the same(it replaced the 24at),the latest HT's aren't too good.The Yaesu FT50 is a good radio,but horrible for trains.A friend has one,it get trashed by WX,and pagers,over the whole VHF band.Too bad,it's a great little radio.Go to a ham store,and check out the used HT's,most of these stores have a return policy of like 2 weeks for refund/exchange.If you really want an awesome mobile radio,the Yaesu FT 2400/2500 are unbelievable!I had a 2400 and I wish I never sold it,my Icom 7100 is great,but not as good as the 2400. A couple of train watching friends have ignored my advice,and one got a BC 235,it's ok,not great.My 7 year old Icom blows it away,I can hear stuff clearly that the 235,my 200xlt,26,43(BAD for trains),46,Yupi 9000,can't even pick up at all!I'll be screwed when it dies....
Good Luck..

Barry

Yes Bill Cheek got thrown out of Scan-L.

What he doesn't tell you is that it was clearly explained how he can use a feature of his posting software to harvest your email address when you read his messages. This valuable item can then be sold to SPAMMERS at a nice profit for Mr. Cheek.
You lose in that you may be bombarded with even more hated SPAM in your email. After scanning through some of the treads in this newsgroup it just dawned on me that some of the sex related SPAM may also be possibly traced back to people who use that feature.

Anyone who has read a Cheek newsletter can easily see how Bill is concerned about making a buck (spelling?) off of those he deals with. When I purchased my new shredder during CompUSA's sale this week, I needed some trash to test it with. The very first thing I choose to try in this new shredder was to see if it could shred Cheek's 'newsletters'. It did a fine job on them!

TIP: The CompUSA sale shredder $54.95 was marked down to $29 and it included a nice trash bin for the results. It has an nice automatic feature in that you leave it powered in standby all the time and all you have to do is drop up to five sheets thickness in the slot. It comes on with a satisfying sound and instantly shreds the waste documents you don't want anyone else to read.

TIP: If you actually have subscribed to Cheeks newsletters -&#65533; you get a far bigger bang for your buck with ' Nuts and Volts'.

Nope, Nyetskape does not have filters. However, there is a plug-in
filter available that works very nicely called FixNews. Get it at
http://www.desisoft.com . It's freeware and works like a champ. Get it
and stop the stoopidity from hitting your desktop.

I downloaded the PCR1000 EEPROM burner software and was 'brave' enough to give it a try. It DID allow me to backup the EEPROM and I also restored the 'blocked' bands.

All in all this program works well. I was worried that it might be malicious but it seems to work as advertised.

I sleep better at night!

Ok I downloaded and tried the utility and it works! I was worried that it was malicious but it works as advertised! I made a backup copy of the EEPROM and then restored with the GENE setting and have UNBLOCKED the unit!!!

Hi Brian

I bought my BC895 off the internet and save $150 over local prices. I bought a Relm hs-200 localy, but only after they came down in price to be competitive with the Internet price including shipping. (I forgot about state tax). I want to support small local businesses, but maybe this is just holdiong on to old ideas. E-commerce is picking up, and if the local guys stay dumb, that's their problem.

Best of luck

See you weedle out of it again mackey, the condition also stated that you
could not ask anyone else to abide by the condition set for you.

> But since YOU refuse to post under a legit ID & you usually post thru
> a false server like Dejanews then your credibility is NOTHING.
>

As for a legit ID you know what all of my ID"S are as you and your buddies
keep mail bombing them, hence the posting through dejanews as you don't have
the balls to do the same with the dejanews email.

> If you can convince Bill Cheek to stand in for you on the agreement, I
> would
> agree to it!

As I stated the condition is for you alone and no one else and you don't like
that condition as you won't be able to post crap like you do now.

It proves that you want to keep things going on the newsgroup by you not
agreeing to it.

I just purchased a BC895XLT from National Radio. $213 INCLUDING
shipping.

http://www.sound.net/~ne/

Cumminications Electronics has it for $195 after rebates (I think
they're instant rebates). CEI has a shipping of $18, so it's a wash.
http://www.usascan.com/

This is one amazing scanner for the price.

See Rich Well's website for reviews of this radio and a whole lot
more.

1576. FS or Trade: Motorola MTS-2000 Flashport

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: David - N6RHL <N6RHL@mho.net>
Message-ID: <35CDF3F7.C84C7A23@mho.net>
Source record: 148404
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap,alt.radio.amateur.swap

I have three (3) Motorola MTS-2000 Flashport Handheld 800 mhz trunking radios for sale or trade.

Model Numbers: HO1UCD6PW1BN
Type: UCKA

All serial number plates are intact on the radios. Radios are in brand new out of the box condition. Radios were used for approx 3 months and have been stored in boxes for the last two years now.

3 radios
2 batteries for each radio
1 Antenna for each radio
1 Heavy Duty lapel mic for each radio.
1 quick charger base without the power supply. You will have to provide your own power pack for the charger.

These radios have a LCD Alphanumeric dispaly on top of the radio. There is no keypad on the radios.

I would prefer to trade these radios for the following items.

I will trade all three radios for 1 uhf motorola spectra mobile radio and 1 vhf motorola spectra mobile. Your radios must be in mint condition.

I will trade two of the radios and related accessories for 1 GE EDACS capable handheld radio which includes a charger, antenna and battery.

I would also be willing to make a deal/trade for 1 uhf and 1 vhf saber portables that are of comparable value and are in mint condition with chargers, batteries and Antennas.

Or I will take any reasonable cash offers. Please only make serious cash offers as I do know what these radios are worth. I would just rather trade for items that I am interested in.

Please only reply to me via personal email. I do not regurlarly check the newsgroup postings and will not see any replies made to me via newsgroups.

If you would prefer to talk to me directly regarding these radios you may page me at 1-800-719-8053 but remember to put in your area code when paging me.

Thanks in advance.

Does anyone have any info in the 895's computer interface...the pinning, what the heck kind of connector is that thing any way. I've been in computers for years and must have missed this one. Also the data format the radio puts out and expects to see.

Has some one already done all this and has a product out there??

Anything at all will be more than I have now.

Thanks

Roy

I was passing by a dumpster last night and I heard a voice calling my name. I peered into the dumpster where I saw a buring bag of shredded office paper. From the bag, I heard a voice--a voice like any other. It could only have been God! Suddenly a burning finger shot out of the bag's glowing ember and enscribed these commandments on a discarded piece of white board. God commanded me to bring them to you:

I. Thou shalt not flame.
II. Thou shalt not engage in personal vendettas.
III. Thou shalt not transmit electronic mail bombs.
IV. Thou shalt not electronically stalk.
V. Thou shalt not post more off-topic than on-topic messages.
VI. Thou shalt not provoke others with lies.
VII. Thou shalt not bear false witness against others.
VIII. Thou shalt not impersonate legitimate users.
IX. That shalt not post forged messages.
X. Thou shalt not exceed the authorized use of any system.
XI. Thou shalt not attempt to speak for anyone else on this newsgroup.

I did what I was told. Now, the rest is up to you. Either behave yourselves or go to hell.

Sorry, I made a committment to this NG 2 years ago that I (along with
a few others) would stand guard here to watch for Cheek attempting to
cause problems or attack users of this NG. In essence, there is a ZERO
TOLORANCE POLICY for his troublemaking! To do what you say would
be going back on my word which I will not do. However, if Cheek
will behave himself & act like a dignified gentleman then there would
be no need to me to get involved.

Hello All,
Does anyone happen to know what HF frequencies are used by most air lines? I think at one time they were in the 8mhz range but have not heard anything there.
Would anyone have any military HF or otherwise? I listened to the Gulf War on HF, tankers, AWACS, escorts,etc.

Thanks.

I finally have had enough with the false stories that John Mackey has
been spreading around on the newsgroups.

I have not posted on the newsgroup before, I am one of the silent people who
read the scanner newsgroup for information. I contacted OBFD and asked him
what the deal was between cheek and mackey on the news group as I was tired
of Cheek myself, he sent the email below to me.

When I declined and said that I did not want to get involved the nasty emails
started, I had to change my service provider because of it.
And I guess they will start over again once this post is read.

1612. Regency R2060 overload problem?

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: jshaffer@mail.csrlink.net
Message-ID: <35cf1277.19455636@news.csrlink.net>
Source record: 148440
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have an old (how old is it, anyway) Regency R2060 scanner, and I've noticed some strange behavior. The first thing I noticed was that when listening to local police or fire traffic, I can rarely hear the mobile unit talking back to the dispatcher. I attributed this to the fact that I live in the middle of a lot of hills and I'm only using the included whip antenna. But then I noticed that when a unit is within a block or two of me, the scanner apparently overloads and I can't understand anything they're saying. To make matters worse, I was listening to an adjacent county (in a direction without a hill :) on the VHF low band and I found that my cordless phone clearly bleeds over onto the frequency! This on a scanner that, remember, can't pick up a fire truck a couple of miles outside of town. So, what's the problem with this thing? Is it single-conversion? Does it have a lousy AGC (or no AGC)? Or what?

> connector. Any hints?

I haven't had extensive experience regarding different antenna's, but I'll tell you what I had done for better 800Mhz reception on my BC895XLT, and would probably work good on your hand held. I purchased a adjustable angle cellular antenna (17-317) from Radio Shack. I have seen posts here before recommending it and wanted to give it a try. The antenna costs $20 and has a TNC connentor, you will also have to purchase the TNC to BNC adapter for $4. Regarding reception and preformance I have found moderate inprovement in receiving 800Mhz. My radio can successfully track two additional systems that before where out of reach of the stock antenna and my mobile antenna. Also It provided cleaner discriminator data on these systems via computer programs like TRUNKER and ETRUNK. I'm sure there are other better solutions, but this seems to work great for the portable solution. I haven't had much experience with roof-top antennas, that may also somthing to look into. I hope this will give you some good advice.

1623. Posting Statistics for Mackey, Cheek, et al

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <35CE31CE.45C1D563@primenet.com>
Source record: 148451
Cross-posted to: rec.radio.scanner,alt.radio.scanner

With the aid of DejaNews, I have analyzed the quantity of postings by several regular posters in the alt.radio.scanner and rec.radio.scanner news groups for a one year period and compiled the statistics. The full one year period between August 1, 1997 and July 31, 1998 was examined on a month by month basis. All the the people were subject to the same search and level of scrutiny.

Seven people who are, or who have been accused, of being high frequency posters were selected. Those people are John Mackey, Bill Cheek, Richard Kendrick, Blake Bowers, George Vetterle, allsafe, and K4CC. The addresses
used by these individuals were the seed for the search.

In the case of Mackey he has used ten different addresses during the selected time period and all ten were used. Those address are: jmackey@usa.net, jmackey@parg.org, kaossf@parg.org, jmackey@parxg.org, jxxxmackey@uxxxsa.net, ka0ssf@premovearg.org, jmackeyremove@usa.net, ka0ssf@paremoverg.org, and jmackey@pio.net.

Bill Cheek changed from cts.com to san.rr.com before the examined time period and his posts from that domain are not included in this survey. The address used was Bill Cheek <bcheek@san.rr.com>.

George Vetterle changed providers, but this only added five to his total count of messages posted. The two addresses surveyed are: geovet@ix.netcom.com and geovet@thevision.net.

The other address used were Richard Kendrick <wa7twi@primenet.com>, Blake Bowers <bbowers@townsqr.com>, <allsafe@netwit.com>, and <k4cc@aol.com>.

This is the quantity of postings broke down on a month by month basis for each of the people named above. If a message was cross posted to both groups, it was only counted once.

SEP 97 | 181 | 78 | 0 | 2 | 4 | 0 | 0
AUG 97 | 29 | 2 | 0 | 1 | 2 | 0 | 0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

AVG/DAY| 5.86 | 6.43 | 0.55 | 0.56 | 0.75 | 0.73 | 0.93

AVG/ADJ| 5.86 | 6.43 | 0.95 | 0.74 | 0.75 | 1.09 | 3.72

The TOTALS are the sum of twelve months of posts for that individual.

The AVG/DAY is the average number of posts per day based on the formula TOTALS / 365.

The AVG/ADJ is TOTALS / SUM OF DAYS IN TOTAL MONTHS OF POSTINGS is the average number of posts for the actual days in the news group. The adjusted value is because some of the posters had a 0 for any given month(s).

The two months marked with an asterisk (*) for Bill Cheek are inflated values. The actual values are probably much lower because these values included the reposts of the messages canceled by John Mackey.

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

For the others, between one eighth and one half of the posts made by them were pertaining to scanners and scanning.

roy@esp.bellcore.com (Roy Harrison) wrote:
> Does anyone have any info in the 895's computer interface...the
> pinning, what the heck kind of connector is that thing any way.

The interface is an IDC 5-pin PCB header (.025" square pins on 0.1"
centers). The mating socket is standard (TechAmerica's Cat# 910-1471 is
25 cents), but a segment cut out of a DIP socket will work just as well.
The pinout is symmetric, with pins 1&5 (the outer ones) carrying data in
(to the radio), 2&4 are data out (from the radio), and pin 3 is ground.

> Also the data format the radio puts out and expects to see.
The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

The following command set is summarized from postings by A. Giammarino
<agia@ix.netcom.com>. For detailed information, check his page at:
http://wp.com/108101/895info.txt

"o" = blank - reports status
= N - turns function on
= F - turns function off

AC Clear Clears all memory and resets the radio.
ARo Record status of LINE for AUX OUT
CDo CTCSS CTCSS search function. Reports 'xx' when found
CS CTCSS reports CTCSS tone number; CSxx set CTCSS tone
CTo CTCSS CTCSS function - Tone Squelch.
DLo Delay status of delay function
DSo Data status of data skip function
+ IC le List selects scan list 'l', entry 'e'; from trunk scan mode
responds with group ID 'nnnnnn'; use KEY00 to resume scan
+ IDo I.D. reports every trunk ID when enabled; format: ID s nnnnnn
+ IL Lockout reports locked out trunk IDs; ILR nnnnnn lock out ID
+ IS Bank reports current trunk scan list ISl set list 'l'
- LL LimLow report lower search limit; LLfffffffff set limit.
- LU LimUp report upper search limit; LUfffffffff set limit.
- LOo LockOut channel lockout status
- MA Channel report status of current channel. Non-trunk manual mode only
MAccc set channel number and report. Will halt scanning.
report: Cccc Fffffffff To Do Lo Ao Ro Nnn
To trunked Do delay status } F=off
Lo lock out Ao (unknown) } N=on
Ro line (audio) status }
Nnn CTCSS number ('00' = not set)
& MD: Status 00 scanning
01 manual mode or after a write to a memory channel

06 after TRUNK key toggled
07 trunk tracking mode.
08 trunk ID held
09 scanning trunk IDs
10 trunk manual
12 looking for trunk control channel (after KEY21)
17 monitoring non-memory frequency (after RF command)
& MUo Mute mutes audio
MUN: Mutes audio; MUF: Un-mutes audio, opens squelch
MUA: Un-mutes audio, returns squelch to normal
- PCb Priority reports priority channel for bank b.
+ PMccc Channel reports status of memory channel ccc. Does not halt scanning.
Similar to MAccc function.
PMccc ffffffff program channel with freq. (note space)
- PRo Priority status of PRIORITY scan function.
QUo Activity continuously reports '+' if receiving a signal, '-' if not.
- RF Freq. current non-memory frequency RFfffffffff sets frequency
RM Mode reports NFM, AM, etc. mode
- SB Bank reports bank letter(s) SBb selects bank(s) 'b'
Scan mode only (not TT)
SG S-meter reports S-meter reading and freq (Snnn Fffffffff)
S-meter range S014-S026.
+ SQ Squelch reports '-' when closed, '+' when open
- SS Skip reports "search skip" frequencies
- ST Step reports step size ST00nnn000 set step size:
000=default, 050=5 kHz, 125=12.5 kHz, 250=25 kHz

+ TT mode only, - normal mode only, & either mode

The keyboard commands, in the form KEYnnh, simulate pressing the
corresponding key on the radio's front panel. Where an "h" suffix is
specified, adding "H" to the key string simulates press-and-holding the
key.

KEYnnh
00 SCAN
01 MANUAL
02 n numeric key (n = 0-9)
03 "." (decimal on numeric keypad)
04 "E" (Enter on numeric keypad)
05h PRIORITY (same as PR)
06h L/O (same as LO)
07h HOLD (up arrow)
08h LIMIT (down arrow)
09h SRC
10 WX
11 DATA
12 DELAY (same as DL)
13h TRUNK
14 DIM
15 STEP (see also ST)

16 AUX (Line out)
17 ALRT/RMT (deactivate only)
18 (SEND ?)
19 AUTO.
20h CTCSS (same as CT)
21 b bank key (b = A-J) (after a KEY13 or KEY13H)
22 FREQ/CHAN
23 LOCK

> Icom will be releasing it?

Last I heard it is now delayed until 1/99. The FCC apparently memoed
Icom about their easy to modify (for the no no band) PCR 1000, R10 and a
couple of others. While Icom alters these radios and begins production
again the R2 is delayed. I do not know what it means for the European
version of the R2.

1638. ICOM Mini-Handy IC-Q7E

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: com-com@t-online.de
Message-ID: <6qkpo1$4u4$1@news02.btx.dtag.de>
Source record: 148466

Kurztestbericht ICOM IC Q7E

ICOM ist bekannt fï¿½r ausgefeilte Technik. Mit dem Mini-Handfunkgerï¿½t
IC Q7E erwirbt man fï¿½r DM 450.- nicht nur ein kleines Amateurfunkgerï¿½t
sondern auch einen empfindlichen Scanner von 30 -1300 MHz AM/FM/WFM.
200 Speicher und 20 frei definierbare Suchbereiche sind fï¿½r die meisten
Anwender ausreichend. Der 300 mW Sender funktioniert wie bei anderen
AFU-Handys auch im Profibereich. Im Vergleich zum etwas kleineren Yaesu
VX-1R, das fast DM 250,- mehr kostet hï¿½rt man mit dem ICOM-Mini auch
unter 87 MHz und ï¿½ber 900 MHz inkl. 23 cm sehr gut die Funksignale.
Natï¿½rlich eignet sich das Gerï¿½t auch als UKW-Radio und TV-Ton-Empfï¿½nger.
Auf 300 MHz AM +-10 MHz hï¿½rt man auf Grund der hohen 1. ZF Kurzwellen-
Rundfunk als Spiegelfrequenz, was aber in diesem Bereich nicht stï¿½rt.

+ sehr guter Empfï¿½nger und Rauschsperre fï¿½r 6m, 2m, 70cm, 23 cm AFU
+ optimale Breitbandantenne
+ Scanner scannt ï¿½ber alle Bereiche im Memorybetrieb
- keine externe Lade- oder Strombuchse
- kein DTMF und DCS, dafï¿½r aber CTCSS
- relativ hoher Stromverbrauch, daher mind. 1200 mA AA verwenden
- leider nicht so winzig wie Yaesu VX-1R und ohne Akku und Lader
- saudumme 4-pol 3,5 mm Kombibuchse fï¿½r Lautsprecher und Mikro,
was beides abschaltet, obwohl Platz wï¿½re fï¿½r 3,5 und 2,5 mm Buchsen
Fazit:
Echter UKW-Scanner mit brauchbaren 2 m / 70 m Funk fï¿½r OV und
Relaisbetrieb
Ein groï¿½er Versender in Nordbayern mit "C" verschickt das Gerï¿½tchen ohne
Prï¿½fung ob Lizenz vorhanden, was evtl. dazu fï¿½hrt daï¿½ mancher das CE-
zugelassene Gerï¿½t als FREENET oder LPD-Funkgerï¿½t miï¿½braucht.

1640. Facinating Data ...

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <35CE8C4F.EFB7D2D6@pacbell.net>
Source record: 148468

I came across these two posts today and felt it was worth reposting.
Definitive data on the posting history of Toilet Boy (aka Mackey).

Edited for the more salient point(s). Compelling nonetheless.

------------ Data From Smally

I have nothing else to say except that, out of curiousity, I searched
the archives at Dejanews to see how much John "contributes" to the
group. I found some 13000 posts in all in the scanner newsgroups since
he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has
made can be counted on one hand, with room left over. Case closed,
folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have
proven what the Clown Prince of Scanning is really all about: A
personal, neverending vendetta against Bill Cheek.

------ Data From Kindricks

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey
pertained to scanners or scanning. Approximately half of the posts
made by Bill Cheek were devoted to scanners and scanning. Now go back
and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

I agree, the R10 is not a perfect radio. Its a nice cute little unit and
I like the auto resume when its turned on but it is slow...

mackey writes a decent nice worded message to cheeks about a technical
matter
that would apply to the subject of this newsgroup and the FAG BILL
CHEEKS
reponds back calling childish name and acting like an asshole as usual.

now we see who the real problem here is: BILL CHEEKS

what a buttwing cheeks is!

Sure thing Ron.

Pull apart the battery case, and the tray underneath the battery.
Insert two screwdrivers on the side of the case, (Each side) under the
tabs that stretch up into the upper case. Pry them out, while pulling
on the top of the radio, by the antenna.

Pops out.

I would like opinions on software for os 535. I have read Rich Wells article about Probe, It sounds like the best., But it is not a very attractive looking
Program. I like the decoding Abilities of Probe, But is there any thing
more Windows oriented That is very functional? I know that these things can get really pricey too, I would like to stay in the $100 or less catagory.
Thanks
Dave

1650. Need help buying scanner to reduce interference

Newsgroup: rec.radio.scanner
Date: 1998-08-09 00:00:00 UTC
From: dpepper2@yahoo.com
Message-ID: <35cd196e.33114757@news.mindspring.com>
Source record: 148478

I use a portable scanner only to monitor the Railroad freq in the 160-161Mhz range. Previously I used a Radio Shack Pro-50 and a magnetic mount antenna on my car roof that had been cut-to-length to optimize 160-161 reception. However, near downtown Atlanta I would encounter pretty bad interference(and not just from pagers), even though I was only monitoring 2 or 3 channels. Since the electrical outlet on my Pro-50 just broke, I am going to buy a new scanner, but would like to significantly reduce this interference, and will pay good money to do so. Any recommendations on features and specific portable models would be appreciated.

I know to look for units with a selectivity of 30 khz or less @ 50db, but what else? Someone suggested a RS Pro-62 with "triple conversion", but I don't think any Uniden portables have this. The SC150B, 120XLT, 230XLT, and BC3000XLT all have "data skip", but what are these features, do they reduce interference, and which does so more? same for the "selectabel attenuator" of the BC3000XLT. Also, what is a trunk tracker, does it reduce interference in the 160-161 range, and does having 800Mhz capability actually increase interference by making the scanner too broad-banded? And in that regard, since the 3000XLT is listed at $699, should I be looking at an industrial grade scanner, such as a Motorola? Wouldn't an industrial grade have less interference, since it is designed specifically for the 160-161 range only? What price range would I be looking at(ballpark)?

Any RS brands I should consider? I have heard that the GRE RS models are better than the Uniden RS ones, but which RS models are GRE? Are there any mail order houses for scanners than would be cheaper than a local ham radio shop or RS? Are there any outlets for single orders of industrial grade scanners?

Finally, what are filters and duplexers, and will they reduce interference in the 160-161 range?

Thanks in advance for any advice and help,

Daniel Dave Pepper

You can upgrade v1.00-to-1.03 to 1.04 free of charge by visiting the ADMS/RT Web site.

I now have v1.04 of the VX-1 ADMS-1 software, with a Firmware 106 VX-1R, and coulsn't be more satisified.

By the way, HRO in Anaheim has a v105 firmware VX-1R as a demo for $210.00.

http://www.feminista.com/v1n9/childhood.html

[Image] [Image]
[Image]
[Image] [Image]
[Childhood Sexual Abuse]

[Rebecca Miller]

"Sexual abuse is when any person, adult or child, forces, tricks, threatens,
or coerces a child to have any kind of sexual contact with him or her.
Example include: touching a child's genitals; having a child touch /
manipulate other's genitals; oral sex; attempts at penetration of the vagina
or anus; rubbing; penetration by anything; forcing a child to look at
genitals; or pornography."

-- From Eliana Gil, The Healing Power of Play: Working With Abused Children; 1991.

Most abused and neglected children never come to the attention of authorities. This is especially true of sexually abused children: there may be no physical signs of harm, there is always intense shame, and secrecy is often maintained, even by adults who know of the abuse, for fear of destroying a family. Usually, an older person uses tricks, bribes, threats or physical force to make a child submit. Children are taught that older people have power and authority over them, so children do not feel they have a choice. Child sexual abusers often make the child extremely fearful of telling, and only when a special effort has helped the child to feel safe, can the child talk freely.

In addition, there is evidence emerging that as many as one in three incidents of child sexual abuse are not remembered by adults who experienced them, and that the younger the child was at the time of the abuse, and the closer the relationship to the abuser, the more likely one is not to remember. Therefore, the statistics of child abuse and neglect are not necessarily indicative of actual rates of child abuse in the United States. The generally accepted statistics are:

Approximately one in three girls is sexually abused before age 18, and one in four by age 14. Approximately one in six boys is sexually abused before age 16. Approximately 1 in 25 girls will be sexually abused by her father. In 85% of all cases, the perpetrator is someone the victim knows. Child sexual abuse occurs more frequently (70 - 80%) inside the family, equally among all races, religions, urban or rural locations, socioeconomic or educational levels. (National Committee for the Prevention of Child Abuse Publication, 1978)

The abuse of boys may be as common as that of girls, but boys are often more reluctant to report. If the abuse was committed by a male, a boy may have misplaced fears about homosexuality. If the abuse was committed by a woman, the boy may not report since sexual adventures are sometimes culturally [Image] confused with "proving one's manhood" and a general feeling that "no real man ever refuses sex".

Characteristics of an Incestuous Family

* Father either passive (weak self image, introverted or isolated turns to child for comfort and reassurance) or authoritarian (domineering, over controlling, overly restrictive, excessive discipline)

* Mother often passive and dependent; occasionally strong and independent mothers will acknowledge the abuse and stop it. The mother may know something is wrong but not be aware of what it is. She may ignore symptoms due to fear of losing her husband, she may herself be abused by the husband, she may have been abused as child, or she may not have the internal or external resources to protect or support the child. Or she may be abusing the child herself.

* Prolonged or habitual absence of either parent from home

* Assignment of mother role to daughter...care for other children, etc.

* Loss of wife by divorce, separation, or death

* History of child abuse in either parents backgrounds

* Conditions of overcrowding, alcoholism, drug addiction

* Isolation due to eccentric belief systems, extreme poverty, or remoteness of area

No child is psychologically prepared to cope with repeated sexual stimulation. Even a two or three year old, who cannot know the sexual activity is "wrong," will develop problems resulting from the inability to cope with the overstimulation. In my case, my abuser was someone I was very close to. The resulting conflict between my feelings of fear and disgust and my love andloyalty towards him resulted in a denial of my own feelings and a total repression of the abuse even as it was occurring. Even if I had allowed myself to acknowledge that what was happening was wrong, I probably would never have told my mother, who was extremely critical and distant and had her own difficulties dealing with raising me and my sister (who is severely mentally and physically handicapped) to have dealt with the information well. The idea of going outside the family to report would simply have never occurred to me, for if I could not trust my parents there was no possibility of trusting anyone else.

A child who is the victim of prolonged sexual abuse usually develops low self-esteem, a feeling of worthlessness, and an abnormal perspective on sexuality. The child may become withdrawn and mistrustful of adults, and can become suicidal. Some children who have been sexually abused have difficulty relating to others except on sexual terms. Some sexually abused children [Image] become child abusers or prostitutes, or have other serious problems when they reach adulthood.

Often there are no physical signs of child abuse, or signs that only a physician can detect, such as changes in the genital or anal area.

The behavior of sexually abused children may include:

Unusual interest in or avoidance of all things of a sexual nature.
Sleep problems, nightmares.
Depression or withdrawal from friends or family.
Seductiveness.
Statements that their bodies are dirty or damaged, or fear that there is something wrong with them in the genital area.
Refusal to go to school, delinquency.
Secretiveness.
Aspects of sexual molestation in drawings, games, fantasies.
Unusual aggressiveness.
Suicidal behavior
Running away
New fears, clinging
[Image] Giving up or throwing a way a favorite toy, piece of clothing, etc.
Sudden turning against one parent, relative, etc.

Irritability, crankiness
Bleeding in vagina or anus.
Disclosure by child (very rare). [Image]
Excessive masturbation.
Sexual acting out with other children.
Bedwetting & soiling (after potty training).
Nightmares.
Abrupt change in behavior, uncharacteristic anger, isolation or withdrawal.
Age inappropriate knowledge of sex.
Constantly talks about sex.
Constant vaginal discharge.
Unexplained pain, swelling, bleeding or irritation of the mouth, genital or anal area; urinary infections; sexually transmitted diseases
Physical evidence (very rare).
Difficulty walking or sitting.
Sleeps too much or too little.
Fear of bathroom. Difficulty at bath time
Fear of a certain person.
Excessive crying.
Exhibiting violent behavior.
Wearing many layers of clothing.
Copying adult sexual behavior
Persistent sexual play with other children, themselves, toys or pets
Hyperactivity
[Image] Changes in eating habits
Lying
Difficulty at bed time
Regression in behaviors
Self destructive behaviors
Increase in accidents
Moodiness
Talking nonsense
Social difficulties
Fall behind in school
Hurts animals
Hints, indirect comments or statements about the abuse...e.g. "I don't like Mrs. Smith anymore"

As the child grows up, s/he may suffer from bad self image, anorexia/bulimia and other eating problems, self-abuse, co-dependency, obsessive behaviors, flashbacks, body memories, suicidal ideation or attempts, sexual dysfunction. memory loss, dissociation

Children who have been sexually abused feel many different (and often overwhelming) emotions, including:

Fear
of the abuser
of causing trouble

of losing adults important to them
of being taken away from home
of being "different"
Anger
at the abuser
at other adults around them who did not protect them
at themselves (feeling as if they caused trouble)
Isolation
because "something is wrong with me"
because they feel alone in their experience
because they have trouble talking about the abuse
Sadness
about having something taken from them
about losing a part of themselves
about growing up too fast
about being betrayed by someone they trusted
Guilt
for not being able to stop the abuse
for believing they "consented" to the abuse
for "telling"--if they told
for keeping the secret--if they did not tell
Shame
about being involved in the experience
about their bodies' response to the abuse
Confusion
because they may still love the abuser
because their feelings change all the time
(Information from The Sexual Assault Crisis Center of Knoxville, TN.)

Children who do remain aware that they are abused and that the abuse is wrong may be prevented from telling by the following feelings:

No one will believe me.
No one cares.
I'll get someone in trouble, and they'll have to go to jail--and
Everyone will blame me for telling.
It happens to everyone.
It won't happen again.
Everyone will know.
I'll have to go to court.
People will ask me lots of questions.
It's too embarrassing.
I'm afraid.
I'll get in trouble.
I've done something bad.
It's my fault.

Sexual abuse also necessarily includes emotional abuse, and many of the symptoms are therefore similar.

If you know a child who you suspect may be a victim of abuse, there are many ways you can take action to help. A good list of steps to take is provided online at The Sexual Assault Information Page'sChild Abuse or Exploitation site.

Some states, such as North Carolina, legally require anyone who suspects a child is being abused to report their suspicion to the state authorities, while some states, such as California, only legally require health care providers to make such reports. As a rule of thumb, it is always a good idea to report the abuse to child protection and to your local police.

A listing of useful information on child abuse, parenting, and other similar information can be found online at NotVictims.

Actually, most of the newer Uniden models have triple conversion. There
aren't too many [new] scanners that don't have triple anymore.

>SC150B, 120XLT, 230XLT, and BC3000XLT all have "data skip", but what

>interference by making the scanner too broad-banded? And in that

A trunk tracking model won't do much else besides letting you track 800 MHz
trunked systems. In other words, interference will not be increased or
decreased much, if at all.

Most of the scanners made now (over about $200) have 800 MHz capability,
which rarely affects the reception of interference on other bands.

**The number one thing which cuts down on interference is having triple
conversion. You can still receive a bit of intermod in an area with a lot of
metal (downtown, for instance).**

>regard, since the 3000XLT is listed at $699, should I be looking at an
>industrial grade scanner, such as a Motorola? Wouldn't an industrial

I am not sure Motorola makes scanners...

However, getting a receiver that ONLY receives on a certain band you select
is the best. I own an HTX-202 ham band only transceiver, and I've *never*
heard ANY images or intermod at all yet.

>local ham radio shop or RS? Are there any outlets for single orders
>of industrial grade scanners?

A good place for mail-order (in my opinion) is Amateur Electronic Supply (www.aesham.com) and TechAmerica (www.techamerica.com). They have relatively inexpensive prices (as compared to Ham Radio Outlet). AES has a couple, more expensive, Icom and Alinco models, however TechAmerica has a great selection of triple-conversion scanners. You can request a free catalog from them, or check their website.

I believe GRE scanners have the LCD display on top, and the speaker just below, and the keypad at the bottom. Uniden models has keypad and speaker positions that are the reverse of GRE's.

>Finally, what are filters and duplexers, and will they reduce
>interference in the 160-161 range?

Filters may help (you could get a band-pass filter, allowing only 160-161 to be received), however a duplexer is really only needed when transmitting and receiving on the same antenna (usually for a repeater). Filters filter out unwanted signals, and duplexers "switch" an antenna (by actually absorbing RF using 4 or 6 waist-high cans) to be used in both TXing and RXing. Sometimes, however, duplexers are very small -- case in point: mobile duplexers. The size of a credit card, and they work almost as good as "real" ones, but the desense of the receiver is a little greater.

So, check out the PRO-67 (usually $220 when on sale, guessing), PRO-64 (discontinued, but very nice at $100-150), and the PRO-90 (about $200 -- a trunk tracker).

http://www.uniden.com has an online store. I believe the Ni-cad pack
sells for about$15.95 there.

I am curious about a separate charger for these batteries. The only
thing I don't like about my new SC150 is the darned ni-cads. I would
rather have a choice... to use ni-cads or alkalines.

Also curious as to whether third-party solutions are available for
SC150 batteries?

I'm new to scanning so most things find me getting up to speed.

Dana

I saw the threads about stopping the flames on this NG and I have the best idea of all. First let me remind you of something you posted today:

"Normally I will do ANYTHING that someone else will do. THAT would mean that if YOU will "never post on the alt.radio.scanner or the rec.radio.scanner newsgroups ever again under his own name or any alias's"
then I would do the same."

Now, I sure don't want to go so far as to say that neither you or I can ever post here again, but I think the following condition can be easily met by the both of us.

If it doesn't apply to scanning, it doesn't get posted. By you or me. Period

That means even if Bill Cheek and friends post lewd jokes, nasty comments, flames, snorts, guffaws or anything else in your general direction, you let it go without saying a word.

And, conversely, if one of your pals/aliases/whatever say nasty things to or about me, it also goes unnoticed and ignored.

If either of us break this agreement, then the entire NG has the right and proof to call the violating party outright liars and denounce any and all credibility they may have. Fair enough?

I have never posted under a false ID and make no attempt to hide who I am or what I am about. So, I think you can rest assured that I have both the credibility, and desire to do what I say I am going to do.

Now, if what you have said all along, that you want this NG to go back to scanning again, is true, this is your chance to prove it to us all.

So it's put up or shut up time. I'm tired of all this BS myself. So, I'll be happy to comply with this if you will.

Certainly, this is an offer that you can't refuse. But, if you do, then the truth will be evident to us all.

-Phil

1665. Any SC150 Battery Options?

I'm new to scanning with a Uniden SC150 scanner. I generally like it, suits my needs. But I nearly did not buy it because it uses Ni-cads. They have their place but if I am away from a power souce for several days it becomes a problem.

Are there any thrid-party battery options for Uniden scanners that use ni-cad power packs?

Thanks,

Dana

I picked up my car mount from a communications shop in Phoenix. Any comm shop should carry a mount that will work, along with the two thumbscrews that go in it.

The mount came in two pieces, so it could fit any radio. Get one like this, and you can't go wrong.

Enjoy the radio, it's great!

Hi wartlip, how's that wart inside your lower lip?

> Fine I hope!

Finer'n you, that's fer sure.

> Do you remember when you have said that UV does not affect coax

I didn't say it doesn't affect coax. I said it
affected the outer molecular layers of the
polyethylene jacket. Some coaxes will prove
worse than others, but in worst cases, it's
not a big deal to those in the know, nor even
to wartlips like you.

> or cause signal loss after time?

How MUCH time? I've got some 20+ yr old coax
that's still as good as new. Looks like hell,
but it's finer'n a frog hair.

> Is that still your position?

Depends on how MUCH time, I guess. I mean given
a LONG time, I suppose when the UV degenerates
the copper shield to cause problems with the
dielectric........but that's a long time, Hermie.

You friggin wartlip........

>CTCSS/DCS search feature primarily, and the Icom doesn't have that.

The Icom has CTCSS search and it works very well.

The reason I bought the Icom over the Yaesu was the scanning set up.

The Yaesu scans in bands only. You can scan only VHF-hi, or only mil-air, or only UHF but not a mix of freqs.

The Icom scans any mix of any freqs.

Good luck,
Ed

According to Police Call 1998 Ed. pg. 22
Blue Angels have the following freqs:
251.600
263.500
275.350
It also notes that since becoming MCAS, a trunked system may be in place; if so there are approx. 20 freqs. (4 groups) between 406.xxx and 410.xxx (pg 15). I don't usually monitor the military, so can't be of more help!
Post further info. here if you get it-I'm sure many are interested in your question...

>tone/code search!

This is hardly new - it's been out for almost a year now. If you search Dejanews there have been a couple of reviews posted to the ham newsgroups. Since this is a scanner newsgroup I'll confine my comments to the receiver.

The extended receive is limited, since you really need to purchase a programmming cable and software to do anything serious with this radio - since it only wants to scan through one band at a time (e.g. the VHF-hi range). It is nowhere nearly as useful as even the most crippled micro scanners (like the Standard AX400b - Welz WS-2000) - but it is cute, tiny, works, and runs all day on its little lithium ion pack. Various versions of the firmware have had various bugs, and the "jumper enhancements" have been progressively removed each time.

If you're looking for keyboard-less, micro size receivers you might want to wait for Icom to ship the R2 later this summer and compare the reviews.

Normally I will do ANYTHING that someone else will do. THAT would mean
that if YOU will "never post on the alt.radio.scanner or the
rec.radio.scanner newsgroups ever again under his own name or any
alias's"
then I would do the same.

But since YOU refuse to post under a legit ID & you usually post thru
a false server like Dejanews then your credibility is NOTHING.

If you can convince Bill Cheek to stand in for you on the agreement, I
would
agree to it!

Dave

If you mean the dip switches they don't control the com ports, only the data rate and the board address.
The scanner control software e.g. Radio Manager lets you choose the com port in the prefs.
The default settings for the dip switches are: Switch 4 on SW2(closest to the transformer) should be on and the remaining switches should be off.
ADDRESS = 80 DATA RATE = 9600 bps

Hope this helps

Chas:-)

For MX300: NMN6070B, NMN6071B, For EXPO: NMN6100A (new, no connector on this one). $20.00 1 of ea. avail.

Radios, mobile:
MAXAR 80, D43TSA6000AC, 155.205mHz, 546 DPL code, w/two mikes, power cords and locking type mounting brackets. $35.00 each or three for $95.00 3 avail.
Mocom 70, U44BBN3100A, 452.175/457.175, 7A PL, with pwr/cont. cables, control heads, mics, (2) spkrs. $35.00 each or three for $95.00.
Note: sets of cables, heads, spks, mikes avail. at $20.00/set, two avail.

Base stations, etc.:
L51TRB3100RM, 33.080mHz, PL 173.8, w/TMN1008C mic. $35.00, 1 avail
L34MHB3104AM, SP1, UHF with desk mic. $50.00 1 avail.
L34LHB3100AM, SP1, UHF with microphone. $40.00 1 avail.
Moden 36, Tone grp. 2 upper, E08ENC0036Al, $28.00 1 avail.
GE low band, 2F, ca. 47mhz solid state base station consolette style. $40.00

Telephone Remote Controls (for DC control of base stations):
T1377A 117vac/12vdc, w/manual $55.00 1 avail.
T1380A 117vac, w/manual $50.00 1 avail.

Channel elements, PL tone reeds and PL tone elements:
Various available for Motorola, RCA and GE, portables, mobiles and bases
at from $2.00 to $10.00 each. Please tell me your needs and I'll have a look.

<sgtphou_rocks@hotmail.com> writes

Hi,

>I noticed all the expansion slots in my AR-8000, does any one know if
>there are any boards that go in there?

I know of only two optional internal boards for the AR8000:

DS-8000

This is produced by AOR and allows basic analogue speech inversion to be
"descrambled" -

DX-8000

Something we do that allows the narrow 4kHz SSB filters to be brouht
into use with AM selected - can be useful if you use the AR8000 for MW
or SW Broadast listening.

There could be others especially in Japan but I'm not aware of any.

Kind Regards,
Cheers,

<sfischer1@mindspring.com> writes

Hi Stephen (again)

Just seen your post here also so if its of help to others who might be
pondering on various options I'll waffle on again if thats OK :-)

>What does the OS-8200 look like?

Its 10 way multicore cable with the plug required for connection to the
AR8200 moulded on the end. Connections and color coding of the cabling
is as per the AR8200 manual.

This can be used for making a Scout reaction tune cable or connecting
any other "device" that you would want to connect to the AR8200 remote
socket.

>I looked in the hole on the side of a AR8200 and realized that the
>FFC (Flat Flexible Cable) for the AR8000 could be glued to a piece of
>plastic and stuck in the hole of the AR8200, If the conductors are numbered
>the same.

The AR8200 socket is a 10 way socket so you can't use the FFC that you
might already have. You could use the OS-8200 to make a "patch" to the
FFC you might already have though. In its crudest form just soldering
the Tx In, Rx Out and Ground connections of the OS-8200 to the correct
tracks on the FFC.

All the best

Is your reception greatly affected if you use one of those "disguise"
antennas that combines AM/FM radio with an all-band scanner antenna.
(You know, the ones that go in place of your regular AM/FM car antenna,
and have splitters that let you connect it to both radios)?

These are also made for CB's. Will you lose a lot of transmission power
in your CB, if you use a CB-AM/FM combination antenna?

Thanks,
Jason

> > a LONG time, I suppose when the UV degenerates
> > the copper shield to cause problems with the
> > dielectric.....but that's a long time,

> OK Bill, I refer you to the magazine "Mobile Radio Technology"
> page 26, article "Coaxial cable for wireless communications"
> section "Jacketing", January 1998 Issue.

That section of the article states:

"Most RF coaxial cables are jacketed with polyvinylchloride (PVC) plastic because it provides flexibility and a moisture barrier in a relatively thin skin. Elastomer jackets are also used in high-flexibility types of cable. Additional treatments are given some cables used outdoors to block deterioration of the plastic by UV radiation from the sun. Such deterioration can lead to moisture intrusion of the line. For installation purposes, the ease of stripping also depends on the jacket type.
As mentioned previously, bonding of these four basic cable elements to each other is receiving increased attention from manufacturers, particularly the bonding of the center conductor to the dielectric and the bonding of the tape-and-braid outer conductors to the dielectric."

The quoted passage above is copyright 1998 by Mobile Radio Technology magazine and Intertec Publishing Corporation and is reprinted here without permission.

Before UV can affect the interior of a piece of coaxial cable, the outer jacket must be penetrated. As pointed out in the above article, that's why many cable manufacturers offer cable with the outer jackets treated for UV.

But, how is the cable penetrated? After years of constant exposure to wind, weather and UV, the outer jacket will fail and crack. A breach in the outer skin develops and the cable interior will start to degrade. The shield will corrode and the electrical properties with respect to the center conductor will start to change. The braided nature of a shield will wick the contaminating elements into the cable and the deterioration will become progressively worse. Then the dielectric will begin to change it's properties. In extreme cases, the foam is penetrated and the center conductor is exposed. The kinds of clues that your line may have a breach will be an apparent reduction in received signal strengths, or in the case of a transmitter, an increase or random variation in the SWR on the line.

For cables that have an aluminum foil shield, a similar failure mode will occur. The contamination will enter the space between the jacket and the foil, and migrate along the length of cable. When the contaminants reach the connector, it will fail. Then, the foam and center conductor will eventually become contaminated. A similar scenario occurs with cable that have both a foil and braided shield, but now you have both failure mechanisms at work.

But, the issue here is how *long* does it take for the cable to succumb to the effects of UV exposure. Obviously, it depends on how long the cable is exposed and the rate of UV exposure. Let's examine two types of environments and their impacts on coaxial cable.

In the Portland area where you live, you have approximately 300 plus days a year *with* rainfall and the associated cloud cover. That cloud cover filters much of the incoming UV and prevents it from reaching the surface of the planet, and your coax. Your environment with it's predominately overcast skies and reduced UV doesn't attack coaxial cable nearly as fast or as much as other areas like Phoenix where I live. Your biggest problem is not so much UV contamination, but moisture contamination. You also have additional contamination from salts in the air brought in by the wind from the sea. That's why you must take extra special care to seal your outdoor coax connections properly.

Conversely, in the desert, we have approximately 300 plus days a year with no rainfall. That means we also have very few totally overcast days and an increased rate of exposure to UV. The limited or non-existent cloud cover exacerbates the effects of continuous exposure of coaxial cable (and human skin) to UV. We also have to seal our connections, but not for the same reasons as you do. We have a high level of chemical particulates in our atmosphere that, if they enter a connector, can be highly corrosive to the interior of the connector and subsequently, the cable itself.

You would think from the foregoing that Phoenix would be an extremely inhospitable environment to coaxial cable. That is very true. The desert, in general, in an inhospitable environment, but, we've learned

to adapt. More importantly, is what we've learned regarding coax and the effects of UV over time. By time, I mean over a span of forty or so years.

The sun tends to bake the outer jacket and it stiffens it up after a while. If you move the cable around a lot after it's installed, you will contribute to the deterioration of the cable very rapidly. On the other hand, if you leave it alone and the wind doesn't beat it around (because you secured it properly when you installed it), it will last a very long time.

We've learned by experience that if you install your cable with good connector seals and secure your cable to your towers and such, it will last for ten or more years trouble free. Some installations in my area have been in operation for almost twenty years with *no* problems.

> Go read it & learn something Bill!

In another words, UV is a problem, but not of the monumental proportion you've made it out to be. Bill's quote above said essentially the same thing, but you've denied it's validity because Cheek said. It seems YOU should gain a little more experience in the world before you spout off.

J "He he, I know I can lie my way out of this. It's worked before." Mackey <KAOSSF@parg.org> attempted to avoid the truth when confronted with the evidence of his actions:

> You sure have a lot of time & energy to spend on CRAP like this!

I'm not surprised YOU think this is crap, especially when it proves that it is YOU who is waging a "reign of terror" in the scanner news groups. You just can't stand getting a dose of the truth, Toilet Boy.

> Richard, GET A LIFE!

I have one. Since you are following the dogma according to PARG on their web page ("We have no life."), you have no life and are jealous of someone who does, like me. If it bothers you so much, start buying your antacids in bulk.

> During the months of April & most of May there was a successful
> truce & the flaming posts were ceased.

That my be your distorted perception of reality, however, that's not true. Actually, you were twitted out by Cheek. Look it up in DejaNews.

> Since the cease started in April & lsted until late May this
> explains the 400% increase in Cheek's posts (April) when compared
> to June compared to only a 200% increase in my (Mackey) posts.

Since the majority of your posts were directed at Cheek (your ego thing again), his posts declined because he ignored you and didn't respond to your inane ramblings. You did, however, continue to agitate the situation with an increase in your flaming of others hoping to draw him out again and feed your ego. Look it up in DejaNews.

> If Cheek gets this consideration then I (Mackey) should also as
> several of my posts were also canceled during this same time
> which caused me to have to re-post the same way Cheek had to.

The number of your own posts canceled by you were of insignificant quantity to affect the overall tallies. Hence, the numbers were shown as they were. In this specific instance, I treated you considerably more fairly than you deserved.

> What proof do you have to back up this accusation? You won't
> have any because I didnt' do any canceling. Remember, many of my
> messages were also being canceled.

This point has already been discussed elsewhere and you were proven
to be the culprit. Look it up in DejaNews.

1742. Using Your Scanner with The Perseids Meteor Shower

Newsgroup: rec.radio.scanner
Date: 1998-08-10 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <35CF8522.77B36639@primenet.com>

Cross-posted to: rec.radio.scanner,alt.radio.scanner

During the next week, you can view and hear one of nature's most exciting light shows, the Perseid meteor shower. Each summer, the Earth passes through a curtain of ice and dust that produces a hail of blue-green shooting stars.

The best viewing will be Wednesday evening just before local moon rise. Look towards the northeastern skies directly above the Perseus constellation. The showers will be visible with the naked eye and you can expect to see between 60 and 80 meteors per hour. Peak showers of over 220 per hour have been reported in the past, so you never know.

The Perseids, which appear to radiate from the constellation Perseus, are named after the mythological son of Zeus who killed Medusa and rescued Andromeda.

A meteor is the streak of light you sometimes see in the night sky. It is caused by the vaporization of small bits of rock smashing through the upper atmosphere at high speeds. Some meteors are random bits of space dust, but most are chunks of material thrown off by passing comets. When the Earth passes through the orbital ring of cometary debris, we see a meteor shower. The parent comet of the Perseids is known as Swift-Tuttle.

The meteor showers will also affect radio communication in the 50 to 80 MHz range. As each meteor strikes the ionosphere, the resultant kinetic energy is sufficient to ionize a column of air about 12 miles long in the E layer. The meteors traveling through the ionosphere leave ionized trails behind them. These trails reflect radio waves and reception can be extended to distances of 500 to 1400 miles. While the meteors themselves burn up and never reach the ground, it does take a few seconds to a few minutes for the ionized column of air to dissipate. You can hear long range communications during these moments. With the density of the Perseids, these times can possibly extend to tens of minutes.

You can listen to the sounds of the meteors themselves by tuning your receiver to an unused frequency in the 50 to 80 MHz range and use single sideband mode. You'll hear a distinctive pinging sound as each meteor strikes the ionosphere.

So get your scanners and tape recorders ready for a new twist to your scanning pleasure.

Whats the difference between a standard scanner and a trunk tracking scanner? (i.e. regular bearcat and a "Trunk Tracker" bearcat). Are the frequency ranges different? Do they act different?

What does trunk tracking mean anyways?

Sorry if these are lame questions, but I'm somewhat of a newbie.

I am selling my AR8000DX and Optoelectronics Optolinx computer interface in order to afford to move. Both are in mint condition with low hours. The AR8000 is blocked and has a narrow AM PCB filter which can be easily switched on/off and can be removed if you wish. Scanner is also modified for Optoelectronics Scout usage. Unit was bought modified from Javiation in UK. Have original antenna, manuals, carrying case, boxes, and everything else. The Optolinx can be used to connect a computer to the AR8000 and ICOM CI-V receivers as well as the Opto Scout and M1. The price is US$520, won't sell either separately, no trades. Price includes shipping to Canada and U.S.. Email if interested or have questions.

Another lame distortion from you again, Toilet Boy. As usual, you're too stupid to see that I was NOT supporting your inexperienced position. I was, however, pointing out the limitations of your argument. You can't bring yourself to admit that Cheek was right and you're wrong.

The full statement that you clipped is:

In another words, UV is a problem, but not of the monumental proportion you've made it out to be. Bill's quote above said essentially the same thing, but you've denied it's validity because Cheek said. It seems YOU should gain a little more experience in the world before you spout off.

his forehead again:

> > Richard Kendrick wrote:

> > I'm not surprised YOU think this is crap, especially when it
> > proves

> YES, you presented corrupted data & slanted facts.

You might see it that way in your delusional little world, but you
have no clue what is and what is not real. Hence, your inability to
distinguish truth from fiction, and to face the truth about yourself.

> > Look it up in DejaNews.

> You look it up & see for YOURSELF!

I did. That's where the information came from. If you don't believe
me, look it up. You *do* know how to actually *use* DejaNews, don't
you? Or do you just know the name of the archive and like tossing it
around thinking it will impress people?

Your inability to face the truth is your problem. Maybe you should
consider seeking professional help for your mental health problems.
You really are getting worse.

> Facts speak for themselves, Kendrick!

Yes, they do. And my facts and those presented by others show you to
be THE largest offender in the scanner news groups. Again, you have
the inability to face the truth about yourself.

> Stop trying to distort the facts!

When it comes to you, Toilet Boy, no one has to distort the facts.
Besides, with your delusional tirades, how would you know the truth
if you saw it?

> According to Mr. Eisner, you are wrong!

Present your proof.

> > This point has already been discussed elsewhere and you were
> > proven to be the culprit. Look it up in DejaNews.

> WRONG! There was NEVER any proof presented. Look it up in Dejanews!

Still unable to face the truth, eh Toilet Boy? The more you scream, rant, and rave your denials, the more I think you're trying to convince yourself more than you're trying to convince me. There, there now, take a midol and call me in the morning.

Hmmm. It would appear that Mr. Healey's
poor math skills and lack of veracity are
nearly as pronounced as Mr. Mackey's.
They should "get together", if they haven't
already.

Sorry would be the operative word here.

Old Sorry appointed himself protector of
the huddled masses so he could have an
excuse (he was the only one who doesn't
see how sorry the excuse was) to provoke,
flame, forge, cancel and disrupt the newsgroup.

John, how about posting a list of the names
of all the people who ASKED you to assume
this "role" you've taken upon yourself? What's
that? There aren't any? Well, what a surprise!

Why don't you just go ahead and admit to your
personal vendetta against Cheek, since it is
so obvious and so well documented?

> No, actually Rich Wells listed a rather long list of problems with it.

I guess I fail to see the 'long list'. Like every receiver, it has its strengths and weaknesses. The radio does continue to evolve since the early Japanese unit I wrote about in my online review. And many people still continue to directly compare a communications receiver and a true-blooded scanner which simply can't be done.

It is aggresively priced...more so than I had expected, and I'm sure will appeal to many with its coverage and memory channels. I'm sure it will prove to be irresistable to those shopping around the $400 price mark and are unwilling to fork over the additional $100-$150 for the similar iCOM or AOR.

I just want to know if anyone uses a Yupiteru mvt-9000 to receive RTTY,SSTV,WEFAX,SITOR and other digital modes. (Of course with a good antenna). Same question for the AOR AR8000.

Thank you for your answers.

1775. Yupiteru MVT-7100 Multiband Scanner/Receiver

Newsgroup: rec.radio.scanner
Date: 1998-08-10 00:00:00 UTC
From: av391@FreeNet.Carleton.CA
Message-ID: <6qmjkl$722@freenet-news.carleton.ca>
Source record: 148281

Yupiteru MVT-7100 Multiband Scanner/Receiver

One of the best scanner/receiver units money can buy!

- frequency range from 530kHz to 1650Mhz in receiving modes:
Wide FM, Narrow FM, AM, LSB and USB (including cellular band)
- twelve frequency steps can be selected
- 10-band search function
- 1000-channel memory
- comes with car connector, hand strap, belt clip, earphone,
original box, owner's manual and original receipt
- purchased in November 1996: used no more than 25 hours
Price: $500 CANADIAN CASH FIRM

Originally paid over $900 from Atlantic Ham Radio. This was the
second model from the top back in 1996. It was hardly ever
used (practically brand new). Yes, from the above frequency range,
you can receive all analog cellular conversions!

Serious inquiries ONLY. Located in Toronto. Leave a voice number
if interested.

> > of your own?

> Well Bill, I didn't expect this kind of response from you. Is
> this why you are so hated in the news groups.

Hated? By whom? Mackey? Boe? Quarnstrom? No loss
there, pal. And now you? No loss there, either........
I don't mind if I am hated by crooks, thieves, and sickos.

> I have respected your books that I have bought from you
> concerning the scanners. I have all three of them. This
> response changes that thought though.

Does it now? Why don't you read the "response" again.
It was only a question. And a very valid question, too.
Here you went right out in public and begged for a handout
that has illegal overtones.

You can't legally copy a chapter out of a book and send
it to someone. You can't legally copy software and sent
it to someone. But you want an innocent hobbyist to go
to work for you because you are too lazy or too cheap to
make the investment for yourself? And you want him to
violate PerCon's copyrights?

And then we wonder why PerCon and others put copy-
protection schemes on their products.............

You can like it or lump it, Mister Amateur Radio
Operator N6RHL, but your actions and the actions
you want of others are potentially very damaging to
the hobby. And so my question was and IS exceptionally
relevant, salient, and succinct.....without emotion
```

and without any sort of flame or attack. It was
designed to get you to THINK about the ramifications
and overtones of what you asked.....and STILL allow
some room for you to save face.

But if it hit home in a sore spot, then I don't
give a flying hoot if you "hate me".

> If I had needed lots of freqs to look up I would certainly
> purchase the cd for myself. But I just need a couple of freqs
> looked up for me. Did that require an asshole response like
> you made to me.

It was a straight and simple question. It was YOUR
post that smacked of assholisms and perhaps even
breaking the law. You could have left PerCon and
CD's out of it altogether, and just asked for "freqs".
That's fair. And reasonable. That doesn't publicly
flout the law and another man's rights like YOUR
blatant question did.

It is neither fair nor reasonable to ask for someone
to violate copyright laws for you.

> I guess you do have quite a bit of free time each day
> to sit down and do nothing but respond to email
> messages.

I do have a bit of time to devote to the GOOD OF THE
HOBBY and to its best interests.....which most
certainly does not include STEALING the fruits of
another man's labor.

You got that, Mister Amateur Radio Operator N6RHL?

> question...

Here's what I posted to the milcom-l list last year after my return trip. You can subscribe to milcom at www.qth.net. If you're interested in military communications, I strongly encourage you to join the list. You can also look at some recent archives for more Miramar frqeuencies from a local listener.

If anyone is interested in trying to coordinate a meeting during the show, I suggest we attempt contact on 146.52 (2M calling). If there's a lot of activity, then we can move to another simplex. Here are some old ones I've used:
scan-l/milcom-l simplex (pri): 147.525
scan-l/milcom-l simplex (secondary): 147.555

If you're not an amateur radio operator, then contact me via e-mail and we'll pick an FRS to meet up on. I enjoy meeting folks on the radio, it is always educational to exchange frequencies during the show.

...and now to my post. ;)
==========
Apologies if the cross-post isn't appropriate, but I thought this would have general appeal...

Please find below an edited list of the 'master' list I sent out a couple of weeks ago. It is cut down just to those frequencies I monitored at the show.

One thing that was strange was that the security forces had 400MHz business bad radios instead of navy-issued radios. I'd seen this before at El Toro, but was surprised to see it at Miramar.

I'd be interested in hearing from other mil-commers to see what they monitored. One other thing to note is that it appears as if the Miramar frequences dominate the spectrum. It looks like the Marines must have left their frequency allocations back in Orange County, at El Toro. While I expected this to happen for the Air frequencies, I didn't expect it for the non-tactical ground frequencies.

Enjoy, and hope to see you next year...

p.s. So how many of you made it to the show?

Go to this site and compare the two regulators.
Fist one is the NTE equivalent to the LM317T
Second one is the NTE equivalent to the 7808.
I still say the LM317T is the better regulator.

Your a lying sack of crap, The message Charles posted which you are not
wanting to acknowledge proves that you do have a vendetta against Bill.

His message is one thing that you cannot deny as fact, you have proven a liar,
fraud, forger, rouge canceler, email bomber etc, the list is numerous in the
things you have done to Bill and others to carry out your vendetta.

I don't know how Louise admitted to you being her kin.

Yes, starting with you, you friggin wartlip.

You so desperately want to be the leader,
why don't YOU set the precedent and start
posting about scanners and scanning and
keep it there.

But OH HELL NO, you can't do that. You
don't know a scanner from a banner....
you friggin wartlip.......

Wow, this sounds to me like something I couldn't overcome. I was
hoping that, with all those parameters for each frequency stored, one
of them would be delay time. Perhaps I'm making a bigger deal over
this than it is, but certainly having no delay on some channels and
some delay (even if it's the same delay time) on others seems pretty
basic.

>

Just to warn you, it is illegal to listen to cordless phones.

Anyway, the frequecies are located from 902-928 MHz. Analog phones are the only units that can be heard without a decoder. SST (spread spectrum) phones are, at this time, impossible to monitor -- even with a digital decoder.

>Does some of you have a good description of what is the deference between 9000 and 9000 MII ?

Here's what the folks at Bandercom say (they're the ones who do the MII mods):

Intermod at 10.8 Mhz is reduced by 40-70%. Scan and search speed has been increased by more that 30% than the regular unit. There's an LED to give you a visual indicator of the squelch setting and battery-save mode. Also, the LED illuminates when the squelch is open and flashes when the battery-save mode is engaged. There also are fewer birdies in this model compared to the stock scanner.

>Can you see if an radio have bin modified?

Most of the time, mods are internal and not readily obvious. In any case, if the modifier has done a proper job, it should look decent if you can see the modification(s)!

Source record: 148314

In article <35CE325B.BC2D149F@ibm.net>, valdemar@ibm.net writes

Hi Pat,

>I'm looking for the instruction manual for the Radio Shack 2005 Scanner.
>Any one out there like to photo copy theirs and send it to me?? Will pay
>for postage and photocopying chargers. Let me know.

Use the web :-)

Take a look at Tandy's support pages at:

http://support.tandy.com

or for a direct link to their PRO-2005 page:

http://support.tandy.com/support_electronics/28538.htm

You can download the important "Bits" from the manual from there. Either
just print it off as a "text file" or import it into a suitable WP
package and create your own manual for reference.

Have fun.
Cheers,

>read the posts on this one, but there is no more useful information
>(unless I want to know about this fight between two men).

There are quite a few scanner related newsgroups, some probably of more interest to you than others:

alt.radio.scanner This the "main" newsgroup prior to rec.radio.scanner starting several years back. Many articles are cross-posted or sent to both groups although you do sometimes find some threads appearing in alt.r.s that does not appear here.

phl.scanner Local area newsgroup for Philadelphia (sp?)

alt.radio.scanner.uk U.K. related newsgroup

aus.radio.scanner Australian related newsgroup

nl.radio.scanners Dutch related newsgroup

de.alt.radio-scanner German related newsgroup

There are are also a number of country specific amateur radio newsgroups in which scanners are often discussed.

Hope that gives you some wider reading. Have fun.

Cheers,

But DigiKey has 7809's and 78L09's cheap enough.

Or, as Andrew suggested, slip a couple of diodes
in series with the ground lead for 9.2v or so.

I tend to like the LM-317T as well, but it is
slightly less easy to whip up into a circuit,
and the backplane can't be directly grounded
for heatsinking....it needs a mica insulator
and heatsink grease. And then there is the
adjustment that can alays go out of whack or
get bumped or just drift.......

So for fixed 9v needs, the 7809 or 78L09 are
hard to beat.

In article <35caf143.175168194@news2.cts.com>, Bill Cheek
<bcheek@san.rr.com> writes

Hi Bill,

A little late catching up here...

>> Other than these the COM205 is identical to the PRO-2006 in all apsects
>> so the OS-456 works with the COM205 just the same.
>
>Does the COM205 have IC-10 and the upgraded
>PLL and Logic/CPU boards *like* the PRO-2006?

Yes IC-10 (4S4xxxx whatever it is) is present on the COM205. I am at
home right now so have no reference to check but didn't all the 2006's
that GRE produce for RS have IC-10 although from memory the Service
Manual does not/did not show it ?

Altai started to distribute here in Europe several of the GRE produced
scanners from around 1994/5 onwards. Initially these were the COM202
(PRO-44), COM203 (PRO-39), COM204 (PRO-43) and COM205 (PRO-2006).
Perhaps the numbers "205" were not the most appropriate in view of the
PRO-2005.

The COM205 is the only one of this initial batch to remain available
with Altai now having quite a few additional Uniden and GRE produced
receivers in their "Commtel" range.

I don't beleive the COM205 is still produced but there are a good number
still available here in Europe. The ones we have at the moment all date
coded '97 which would be after RS stopped distributing the 2006. They
are also identified as "Made in Japan" whereas most (all?) GRE produced
sets now seem to be of Chinese origin.

A European PRO-2006 and COM205 would be the same with the only
difference over a US PRO-2006 being the internal AC transformer and
D501/502 etc.

D-501 etc are configured for the European bandplan - thats full coverage
and 12.5kHz steps sizes on 800MHz but this can be changed just as with
any PRO-2005/6.

The COM205 remains the only "full coverage" desktop that has appeared
under the Commtel name.

Hope that helps.
Cheers,

I have been trying to update my new page covering the Hampton Roads VA area: The Hampton Roads Scanner Page Several people have e-mailed me frequencies, which has been very helpful for some areas that I didn't have verified information on. I have also had several requests for more military information. I am not much of a military listener but, I would like to have a strong military section and use the page for locals and visitors alike to exchange information. Check out the page and if you have any information or find corrections that need to be made please send them in.

Thanks,
Van

I just bought a PRO-2042 from www.ebay.com for $188.50 this
past week. Everyone bids higher on the PRO-2004/5/6 models
probably due to ease of cellular modification. E-bay has
a PRO-2005 right now with a bid as high as $330! That's
crazy. The OS535 from http://www.javiation.co.uk/ can
pick up cellular without the unlock code. The USA OS535
will require a code. Some say the new one can't be unlocked
but there are those that claim it can (and for a fee will
provide it!). Javiation also sells new CPUs that enable
the missing frequencies.

The PRO-2042 is and excellent radio and has great reviews:
http://www.strongsignals.net/htm/my_rank.htm
The BC-9000 is also rated at this same website.

Robert

Richard,

Interesting post. I would like to point out, that my address has also
included the bbowers@P_ARG.org

P_ARG of course, is the ancronym for the new HAM/scanner/swl
radio group that
I have co-founded, and hold the positions of Chair of the testing
comittee, Chair of the technical comittee, Chair of the membership
comittee, and others.

Membership is free for anyone wishing to work to enhance the radio
hobby. Membership is easy too, just send email to me, and I forward
it to the membership comittee for approval. Just about all are
eligible, as we are by no means trying to be an organization that,
like some others, believe themselfs to be elitist.

Live from P_ARG!!

In mint condition, seldom used, also comes with leather case in same mint condition, rechargeable battery pack, copy of manual, and ac adapter/charger. It covers 28-956 MHZ, and includes the entire 800 mhz band!

Will ship to lower 48 States for $160.

No, Wartlip, you tell me what it says.

Tell me how UV penetrates the polyethylene
jacket and through the copper shield to
dielectric.....which is where the deterioration
would have to take place in order to impact
the performance of the coax.

Tell me, Wartlip, tell me! Teach me something.
Expose me! Here is your chance for fame,
fortune, and glory. If you do it right, all
my kingdom and glory can become yours.

Do it, Wartlip, do it! Do it now! Don't
wait! Hurry. It may be your last chance!

You friggin lunatic...........

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

I now resume to the topic of scanning, do not pass go, do not collect $200. Thank you, and goodnight.

-Phil

I own a digital 900 MHz Sony Cordless phone and used a frequency counter to record the base and handset frequencies, monitored both frequencies on two separate scanners and heard NOTHING....the scanner did not even stop when in search mode covering the phones frequencies. The phone is not Spread Spectrum
 (Thanx Heddy) but it is digital.

How can this be, you scurvy, low-life scumscucker?
One, where the hell would anyone sell e-mail addresses?
Two, when you can buy 'em for $25 for a couple hundred
thousand, how the hell is the 700+ count of the SCAN-L
list going to be profitable? You can't sell a hundred
addresses for a penny, so seven cents is profit? Maybe
for you, huh?

> You lose in that you may be

"May be" is a loss? What are you trying to pull now,
Vikktor-Baby?

Wanna talk about loss? Let's talk about how YOU
receive illegally copied copyrighted publications,
by your own public admission, no less! Yes, I still
have your confession.

> After scanning through some of the treads in this newsgroup it just

Well, since those were illegally copied copyrighted
publications, it's a good thing you got rid of the
evidence, you theiving slimeball.

Make a buck, huh? At 32-cents postage, on top
of costs of paper, printing, consummables, and
resources, you're saying I should give it away?

Ummmmm, Mister Vikktor Heeley, I don't see YOU
giving anything away other than odors off that
carcass you call your body. I just flushed one
like it this morning.

> TIP: If you actually have subscribed to Cheeks newsletters -ï¿½ you get a far

Gawd..... Wartlip, can't you read? I *said*
I will NOT negotiate with you. The standing
offer is there.....for the 4 or 5 point deal
I offered you. It includes solely thee and me.
No one else. I am not going to "deal" or
negotiate with you on ANY matter, and especially
NOT where others are involved.

Just THEE and ME, you friggin wartlip. That is
THE deal and the ONLY deal. It is inclusive and
exhaustive, and you may not add to it. Item 5
said, "Period. No if's, and's, or's, or but's."

And that is where it stands you flippin wartlip.

Not true. Each PC serial port is a separate device (but may be housed in the same chip) and all can be used simultaneously if you assign each one a unique IRQ.

Serial ports may share an IRQ as long as only one port is in use at a time.

>resistor to control the voltage.

For those with access to a REAL electronics store, an LM7808 will work just fine in most applications, and is probably cheaper than an "adjustable" regulator. Many devices that specify a 9 volt input will work just fine on 8. The lower the input voltage to the device, the less heat generated by the device's internal regulator.

If 9 volts is truly required, just insert a resistor between the center lead of the LM7808 and circuit ground. Start small and increase resistance until the desired output voltage is reached.

Alternatively, substitute a small diode or two for the resistor to get about 8.6 or 9.2 volts.

I have almost no qualms with the AR5000. As you correctly identify, the relay clicking is annoying, and the relays may, over time, wear out. The other item I didn't like was things like delay, resume times, etc were applied globally to all channels. Admittedly, you can store a 'profile' of your favourite settings in one of ten profiles, and select this profile at any time, but you still cant have one channel programmed with no delay and another with say 5 seconds delay at the same time.
Other than that, I have no hesitation in recommending the AR5000. By far the best RX I've ever used. I've had this baby for 1 year so far, and will probably have it for many many years to come....

AOR Spectrum Display Unit SDU-5000
$650 - buyer pays shipping

This unit is in mint condition and is the current production model compatible with the AOR AR-5000, as well as ICOM R-7000, 7100, and 8500 wide band receivers. Other receivers with 10.7MHz I/F may also be suitable for use with the SDU-5000. While earlier versions required a ROM change for use with ICOM receivers, this unit has both AR-5000 and ICOM command sets in the production ROM.

The following AOR web page describes the unit and gives specifications:

http://www.aorja.com/sdu5000e.html

Money order for $650 plus shipping costs.

Don't try it with mine. I've increased the torque adustment.
My door closes so tightly it "loads" the opener. You might
break the handle off but you won't lift the door. A common
theif trick in our area was to lift the door and shove a
skinny kid under to release the door. We have now compensated
for that!

> Like most Titanium locks ($100.00) shatter with a spray of nitrogen
> and a tac hammer.......

Spray with LN2? I use LN2 frequently at work (Aerospace). It would
take MUCH more than a simple spray to do that. Better take a dewar
and a bucket...even then, a tack hammer? Uh, yea. Only on TV.
We make our own LN2 and bring it to our lab in 160L dewars. Where
does the theif acquire his? Again, only on TV.

Code grabbers are real, the rest of this is bunk.

>people use radios and scanners on flights all the time? Some airlines allow
>it, some don't. What's the deal, do they cause some terrible interference or
>something?

There was one incident of an FM radio causing terrible interference.
During cruise, the pilot of an airliner saw that his navigation stuff
wasn't working right. The crew found a group of football fans listening
to a game. The radio was turned off, and the instruments were OK. The
fans turned the radio back on, and the instruments went blooey again.

I've forgotten all the details (this was written up in one of the computer
mags several years ago), but the scene apparently got rude, between the
fans wanting to hear the game and the pilot wanting to know where he was
going.

Policies vary among airlines, and among individual Captains. It depends
on their levels of paranoia vs customer service. They all ban everything
electronic during takeoff and landing (below 10,000 feet), since there is
no time to investigate or argue if somethng funny happens. That's also
the phase where you're not supposed to have stuff out of your carry-on,
anyway.

Great tip. RS has manuals for most (all?) of their current and
near-current stuff there.

Bought a car tape deck at RS. Display model, manual missing. They
ordered one for me, but I needed to install it - and figure out how it
worked! - that weekend. Getting the manual off the web site was a
lifesaver.

So what your saying mackey is that Bill is the only one with a
compusereve account .
I hate to burst your bubble but several thousand other people have
commpuserve as a service provider.
Compuserve also provides newsgroup posting services for smaller
providers who use their lines.

> The IP address of the machine you used to make the post below
> was 205.156.234.38. That traces back to a compuserve account. It
> is a well known fact that you have a compuserve account & is

> > choice but to cut your access to the fido net.

Also it appears that you are very worried about Charles and his
statements to accuse him of being Bill in a lame attempt to try and

discredit him.

You really should do something about your paranoia as it is getting worse with each passing day.

Again proof that you are the one who made up the warrant story in a feeble attempt at black mailing Bill and forcing him off of the newsgroup.

People the late great mackey has once again proven he is guilty as charged in perpatrating the warrant story as leverage to force Bill off the newsgroups.
How can anyone in good conscience believe anything you say as truth when you have consistently lied on here by stating that you are only trying to protect the newsgroup and the world against Bill and his dark forces for the betterment of mankind and world peace.

Hate to tell you this mackey, but your protection and help are not needed or wanted , once you realize that you will on the path to recovery and will once again be able to seperate fantasy from reality.

So now is the time for you to end this once and for all, go back on topic, don't worry about Bill or anyone else , as long as he does not talk to you or speak of you there is no reason for you to continue with your vendetta.
People on here see you for what you are , a pathetic paranoid loser who has nothing better in life to do then make it his life ambition to destroy someone he dislikes.

Why don't you take some of the energy you waste in attacking Bill and use it for good , volunteer some of your time for the betterment of your community, you could join the local volunteer fire department, the hospital, or take time to visit the elderly at one of the nursing homes. Do something constructive with your time and enegery and you won't be obsessed with Bill.

1888. Pro2004 discriminator help, please

Newsgroup: rec.radio.scanner
Date: 1998-08-11 00:00:00 UTC
From: Mike Beaty <mbeaty@nyx.net>
Message-ID: <902863794.237795@iris.nyx.net>
Source record: 148085

I've got an RS Pro2004 and a coupla POCSAG decoder programs I'd like to try. I tried the various 2004 jacks to the soundcard and the earphone jack off a Pro-39, but it was more finicky and error-prone than I'd like. So, I've been convinced to put a discriminator tap on the 2004 (unless there's one available on my Motorola MaxTrac 300 ;-).

So, I've found the descriminator chip pin-outs (saved a long-ago article, but also at http://www.scancat.com/descrim.html). For the 2004, it states that audio baseband for NFM/AM is found on TK-10420 pin 9 (which I know from previous mods is behind the sloping front panel - ouch) or can be found on TP4 (which looks *much* more easily accessed). So far, so good.

I'm planning on mounting a female 1/8" phone plug jack to the 2004 chassis. I assume the tip wants to be connected to either the chip leg or TP4.

Where does the barrel of the plug get wired to? Audio ground? Certainly not chassis ground?!? I know enough to know that the circuit must have two leads, but not enough to know where to find the second, probably obvious one. Sigh.

As an aside, when I installed Sema115 and I tried to use it for the first time ever, it said that my trial version had already expired. Anyone else seen this? Note that I'll be registering whatever I end up with, but it won't be sema115 if I can't try it first. No big deal, because poc32 looks very good. Just curious. I'll probably write to the sema115 author once I get the descriminator tap installed.

Many thanks in advance!

Mike

If you've got POC32, this works:

- Plug an audio cable from scanner earphone jack to LINE IN on sound card
- Open the Windows "Volume Control" -- double-click on speaker
- Set the LINE IN slider to the second notch
- Turn the scanner's volume to 50% of maximum

This works for me -- and it works great!

1890. Bill's and John's Degrees

Newsgroup: rec.radio.scanner
Date: 1998-08-11 00:00:00 UTC
From: Midnight.Rambler@asu.edu
Message-ID: <6qqad8$7i4$1@nnrp1.dejanews.com>
Source record: 148087

OK, my curiousity has gotten the best of me. Since Bill has been alledged to share his credentials with those who ask politely, then John, by his own "held to the same standard" standard, should be willing to do the same. Therefore, I am asking, politely, if both are willing to disclose to me, through email, the following:

Degree held
Date earned
Institution
Institution's contact information

To be fair, I agree to keep the information confidential until I have confirmed both of your degrees. In fact, I will be willing to indefinately keep the information confidential other than to publicly declare the I have confirmed what I have been told. Are either of you takers? If so, Email your information to:

Midnight.Rambler@ASU.EDU

1893. Pro-62 Problem(s)

Newsgroup: rec.radio.scanner
Date: 1998-08-11 00:00:00 UTC
From: Scott Decker <sdecker@esg.intel.com>
Message-ID: <35D0A966.4A5FC9E7@esg.intel.com>
Source record: 148090

Hi all,
I have a RS Pro-62 that seems to have a problem(s) with receiving.
Let me explain. First, under normal power conditions using the NiCads
inside things seem to be normal. When I plug in the AC adapter to either
the re-charging jack or the ext-power jack the reception goes to $&%$#.
It's almost like, as the batteries start to take the charge or the input voltage

jumps up, I get motor boat buzzing noise from signals that get in over the
squelch.
As time goes on, about 3 to 4 minutes, the only signals that get in are the
strong ones.
I'm not sure if this may be a voltage regulation problem with the squelch
circuit or not. I know you are all saying, that the AC adapter is screwed up or
the
scanner power input filters are hosed. Well I don't have to have the adapter
plugged
in to have this problem. This seems to have another affect on the radio also.
After turning the unit on, sometimes I get the channels that I have aircraft
frequencies programed in on. Turn it off and back on, and presto, aircraft
signals come in fine. Sometimes a slap on the side will get rid of the motor
boat noise
but I hate slapping a radio to much. I was thinking that a ceramic filter may
have gone
south or maybe a crystal filter did the same. I will probably send this in to
have it looked
at but I wanted to know if any one else has had a problem like this so I can
direct
the repair center to what's going on? The problem of plugging in the AC adapter
is almost like I'm making a ground connection to the building structure and
building
a Faraday cage around me. I would have thought it would make a better dipole.
Any help or comments would be appreciated. If it would be better to answer via
direct E-Mail rather that the news group, please use the address below. I would
also like to see if I can get a schematic for this radio if they are available.

Thanks, Ryan. Perhaps my sound card isn't as good as yours. I've
tried both mic and line-in inputs to the card, as well as different
outputs, scanners, and volumes (both in and out). Tapping the
discriminator sounds reasonably easy and more reliable. I have been
able to get POC32 to decode some pages, just not as many as I'd like.

On the one-way pagers, yes. On the Tenor voice pager and other NPCS pagers, it's iffy. SkyTel pagers are an example: the PageFinder and AccessMate, both "1.5-way" NPCS pagers, don't have the frequencies printed on the back, and the company guards it as a "proprietary secret."

By the way, does anyone know the "inbound" channel for SkyTel two-way? I already know what the freq. is for the "outbound" channel (940.2375 Mhz, with a bandwidth twice as wide as one-way paging freqs to allow for higher bps rates... guard it as "proprietary," and you'll only fuel my curiosity <G>), but I haven't been able to find which channel the pager uses to "talk back" on.

> B.wav
> C.wav

A.wav is the data channel on a GE/Ericsson EDACS trunked system. I'd suggest searching around this frequency, as you might find the frequencies where actual voice transmissions are taking place (on the other hand, the system may be digital, and you won't be able to make sense of it).

B.wav is the data channel on a Motorola trunked system, possibly a type II Smartnet. Like above: check around this channel, as you might find voice transmissions.

No clue what C is.

Source record: 148105

Hi

I hope that someone has modified their AR1500 and would be able to point me in the right direction. I'm trying to tap "baseband audio" directly at the output of the discriminator chip of my AR1500. As the dicriminator chip in this scanner is a TA7640AP and after reading the various messages on which pin to tap I used pin 9. Pin 9 it seems is only used for WFM and AM not NFM on this scanner. Where is the correct place to tap into the NFM ?

Thanks in advance !

J "He he, I'll just keep lying. They'll never know the difference."
Mackey <KAOSSF@parg.org> lied again:

> How can a DIRECT QOUTE be distorted unless the AUTHOR (YOU)
^^^^^-- learn to spell moron

> distorted it?

For it to be a direct quote, it has to be a *complete* quote. You know, like a complete thought, which you've continually proven incapable of having. Had you gone to high school and college, you would have learned such simple concepts in English class. If the abbreviated quote alters the context of the total quote, as yours did, it shows you are deliberately trying to alter the original message and pervert it into something other than it was intended to be. Since you failed to include the full text, your intent is purely to misquote me and change my original message.

> I didn't chage ANY of your words, it was an exact qoute!

Your sin is one of omission. You failed to include the *entire* text. You know, the part that says you're an inexperienced idiot and doesn't know what he's talking about? Since you have such a pitiful memory (a sign of genetic deficiency and inbreeding), here is the full text to remind you of your stupidity:

In another words, UV is a problem, but not of the monumental proportion you've made it out to be. Bill's quote above said essentially the same thing, but you've denied it's validity because Cheek said. It seems YOU should gain a little more experience in the world before you spout off.

> Thank you for saying it again!

You're welcome, FOOL!

J "He he, I'm the best liar. Nobody can tell." Mackey
<KAOSSF@parg.org> had another brain spasm and hurt himself:

> Stop posting incorrect & corrupted data & then it ALL will be real!

There there, Toilet Boy, calm down. You know you have such a delicate constitution, you'll give yourself a seizure again. You know you are unable to determine fact from fiction, especially when you don't take your medication regularly like you're supposed to. Yes, you're right, the voices in the real world don't know you really did get caught red handed making all those forged posts, cancellations, and have caused all the trouble in the news groups. It's ok, you can tell all the lies you want, the voices in the real world won't know if it's the truth or not.

> You've never used facts!

Now now, Toilet Boy, it will take a few days for the medication to take effect. Just be patient and you'll be able to calm down again. The voices in the real world will stop telling you what to do. Yes, you can put the aluminum foil back on your head so the aliens can't beam their microwave signals of truth direct into your brain. Here, you can use my duct tape to hold it on. No, the voices in the real world don't know what facts are either.

> Here you go, fresh from Dejanews! Feel free to confirm authenticity!

Yes Toilet Boy, it's ok if you cover your eyes with the duct tape. That way the aliens won't be able to see you either. Yes, you can have jello tonight for dinner. Yes, I think the cafeteria has blue this time. No, the voices in the real world haven't poisoned it with truth. There there, Toilet Boy, take a midol and go back to bed now. The mean man is not going to hit you with anymore truth tonight.

Ok, I reset the scanner and reprogrammed in about 40 freq's (all none-trunked). It scans much faster now. But now, whenever the scanner stops while scanning, the word DATA with a diagonal line through it appears (but not when I hit Manual and step through the frequencies). I found something in the manual about how you can push the DATA button while searching if the scanner is stopping on freq's containing data and you don't want it to do that. But I didn't see anything about the crossed-out DATA appearing during normal scanning. Anyone?
Thanks,

Recently, I ran across some transmissions I'm not familiar with in the West Texas area, on 468.075 MHz. I know it's data, and from the sound of it, it's a network of transceivers as I can hear a strong signal from a nearby station transmitting, followed by a weaker signal from a more distant station immediately following.

For those interested, I have a recording of the transmission in .WAV format, located at:

http://www.eden.rutgers.edu/~poet/oddsound.wav

Would anyone here be able to tell me what this is? Thanks...

I have a manual for the BC200xlt in electronic format. It actually is
on my desktop publisher program Microsoft Publisher. If you happen to
have that program than it would work out great, if not, I think that
MS used to have a limited time version of this program downloadable
for review. Let me know what you think and I can e-mail it to you.

Hi,

I'm runiining this ad again,I thought I had it sold TWICE,one guy stopped responding,the other guy wrecked his car...

I have a PRO 26 for sale,I bought it "new",it was a leftover on the shelf,the last one I know of anywhere around here when I got it in June. It's been modded for 800,in great shape except for a small scratch on front display window,about 1/8" long,and a couple of scratches on back from the display case rubbing on it.Looks new other than that.I'm asking $175 firm,I'm only selling it to pay for another toy....
Email me if interested....
Barry

Distortion by ommission is still a fabrication, lie, distortion or
corruption of the actual facts.
Therefore, you ommitted the bulk of the fact, therefor you lied by
intention of ommission.

Hawke

First off, it is a shame that you have let this degenerate to this, ie
who has won, or lost. In other messages, you state that you are
on here for the good of the newsgroup, but now, you clearly show
that this is just a vendeta.

Secondly, you have been given proof positive that Bill was not
kicked off, booted off, asked to leave by any authority, or other
wise removed from FIDONET, but you still refuse to acknowledge
those facts.

Live from P_ARG!!

400-450 UHF Lo, 70-Centimeter Amateur Radio,
Government
450-470 UHF Low
470-512 FM-TV Audio Broadcast, UHF Wide
760-806 UHF-T Band
806-824 Conventional Systems
849-865.9875 Conventional/Trunked
866-869.000 Public Safety
894-999.9875 Trunked
****
****
The Radio Shack PRO-60 Programmable Scanner lets you in on all the action!
This scanner gives you direct access to more than 68,000 frequencies
including police, ambulance, ham radio, and transportation services. You
can select up to 200 channels to scan, and change your selection at any
time. The secret to your scanner's ability to scan so many frequencies is
its custom-designed microprocessor - a tiny, built-in computer.

Your scanner includes these special features:

Triple Conversion Superheterodyne - Virtually eliminates any interference
Receiver from IF (Intermediate Frequency)
images, so you hear only the selected
frequency.

Hyperscan - Searches through frequencies at 50
steps per second or scans stored
channels at 25 channels per second.

Monitor Memory - Lets you temporarily save up to 10
frequencies you find during a frequency
search so you can decide later if you
want to store any of them into
permanent channels.

Direct Frequency Search - Gives you direct access to every
available frequency so you can find
interesting broadcasts.

Two-Second Scan Delay - Delays scanning for about 2 seconds
before moving to another channel, so
you can hear more replies.

Ten Channel Storage Banks - Lets you store 20 channels in each of
10 storage banks to group frequencies
so you can easily identify calls.

Liquid-Crystal Display - Shows the selected channel and
frequency and the selected functions.

Memory Backup - Keeps the frequencies stored in memory
even when you remove the batteries.

Lockout Function - Lets you set your scanner to skip over
specified channels.

Keylock - Prevents you from accidentally changing
the scanner's programming.

Priority Channel - Lets you designate a channel to be
scanned every 2 seconds, so you do
not miss important calls.

AM/FM/WFM Mode - Automatically selects the most common
reception type for the band you are
scanning, and lets you override that
selection.

Battery-Saving Circuit - Draws only 40 percent of the normal
operating power.

Optional Power Sources - Lets you power the scanner from
internal batteries, standard AC power
(with an optional AC adapter), or from

your vehicle's battery (with an
optional DC auto adapter).

Ni-Cd Battery Charging Circuit - Lets you recharge nickel-cadmium
batteries while they are inside the
battery compartment.

****
****

Frequency Coverage:
30.0-87.4950 MHz (in 5 kHz steps)
87.5-107.9500 MHz (in 50 kHz steps)
108.0-136.9750 MHz (in 25 kHz steps)
137.0-224.9950 MHz (in 5 kHz steps)
225.0-399.9875 MHz (in 12.5 kHz steps)
400.0-512.0000 MHz (in 12.5 kHz steps)
760.0-824.0000 MHz (in 12.5 MHz steps)
849.0-869.0000 MHz (in 12.5 kHz steps)
894.0-999.9875 MHz (in 12.5 kHz steps)

Jim,

I am still confused about the power requirements of the SportsCat 150.
The case of the SC150 says 12 volts DC.

The AC power adapter says 12 volts DC, 200 millamps. The battery pack
says 4.8 volts DC, 800 milliamps.

I have a car adapter, selectable for 3, 6, 9, and 12 volts...
milliamps not listed. Where does this leave me?

Dana

<curator@www.cops.aust.com> writes:
>Does anyone have any frequency information for the Iridium Satellites....

From www.iridium.com

"The Iridium system will employ a combination of Frequency Division
Multiple Access and Time Division Multiple Access (FDMA/TDMA) signals
multiplexing to make the most efficient use of limited spectrum. The
L-Band (1616-1626.5 MHz), serves as the link between the satellite and
Iridium subscriber equipment. The Ka-Band (19.4-19.6 GHz for downlinks;
29.1-29.3 GHz for uplinks) serves as the link between the satellite and
the gateways and earth terminals."

Presumably there additional control and telemetry links, but I couldn't
find them on the page.

Yes, they can cause interference, but some airlines (including Delta and my hometown's Northwest) allow it because it is very little.

All scanners and newer radios actually have a very low power transmitter inside, called the local oscillator. I wouldn't guess as to how little it puts out, but I would think less than 0.1mW. Some airlines care about that, others just don't want you to listen to their (or anyone's) communications, and others just want you to request permission.

I'll tell you, using a scanner on aircraft is great because you are sitting inside one big antenna! <grin>

I guess easy to do without intention either - especially if a PRO-2005
case gets damaged and a replacement is sought. Are 2005 "fronts" still
available from RS I wonder.

>> I don't beleive the COM205 is still produced but there are a good number
>> still available here in Europe. The ones we have at the moment all date
>> coded '97 which would be after RS stopped distributing the 2006. They
>> are also identified as "Made in Japan" whereas most (all?) GRE produced

>
>You're kidding! Wow..... Up through the
>PRO-2042, GRE units were all made in Japan.

Forgot about those, yes they were Japan but the majoiry of handhelds
from the PRO-60 onwards all seem to have been made in China with serial
numbers starting with a "C". The last batch of PRO-44 were of Chinese
origin and that would be 2/3 years ago at a guess.

Listening to cellular and cordless phones is illegal.

Cordless phones operate from 43.72 to 46.97, 902-928, and cellular phones
frequencies are blocked from all US scanners as of 1994.

There are 832 AMPS cellular channels, so I wont post them all, but the
mobile range is 824-869 and the tower range is 869-894.

Freq Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

My 895 seems to scan channels very slowly - or, the channel number
that I'm watching increment is deceiving...? I.E., I can see each
individual channel number go by when it scans (probably means it's
scanning at around 5 channels/sec). How fast does other people's
channel numbers increment during scanning?

Thanks,

I dont mind when the card is released, I really need to know some
technical info on its operation in the AR82000 before I even think
about ordering one!

WRONG BILL!!!

You are once again seen as a liar as you have been betrayed
by your own words.

You have been fighting with people on this newsgroup LONG before
I ever came here. Following is a message describing a fight between you
& Hugh Duff before I came on the scene. (They don't even mention me!)

++++++++++++++++++++++++++++++++

Subject: The envelope please
From: crs1026@inforamp.net (Paul Cordingley)
Date: 1996/07/27
Newsgroups: rec.radio.scanner

In the spirit of the olympics, let's do some scorekeeping.

Bill posted a FAQ that had some useful technical information.
That's five points to Bill.
Hugh says the FAQ also had an element of commercial self-interest.
Five points to Hugh.

Bill says there was nothing rude or inflammatory in the post, yet Hugh
attacked him. True. That's five points to Bill.
Hugh says Bill's response was crude and an escalation of the ill
manners betweeen the two. Also true. Five points to Hugh.

Hugh says Bill is exaggerating his credentials. Bill cites some
relevant credentials but declines to say where or when. No decision on
this one.

Bill says there are lots of commercial people in the newsgroup, so why
pick on him? But he doesn't name any. Sorry, Bill, no points awarded
unless you can tag someone.

Bill takes shots at people on medication. No points for Hugh, but Bill loses five for bad sportsmanship.

Spoofed messages arrive from Hugh's part of the world. No points off Hugh, but Bill gets five in sympathy.

Is there a message here folks? Yep: the message is, this isn't a competition, it isn't an olympic event, it's a newsgroup. A nice, otherwise friendly newsgroup. There is no reason to compete. In fact, there is nothing to be won. No one is bigger here, or stronger, there are no little pink bunnies that outlast evil battery-powered dragons. We all know *something*, and we all deserve to contribute equally. No one has higher, or lower, stature, even if they know more, or less, about radios. And you don't help anyone by arguing about who is the bigger expert, or the bigger asshole.

One last thing. Life teaches that people rise to the top not because they know the most about radios, but because they know the most about getting along with other people. That means manners. Each participant loses five points for each time they mentioned a bodily fluid, or an act of copulation, or the ingestion of personal apparel. (Take off your shoes and count backwards on your toes if you have to)

And to all of you who have remained silent throught this childish and repulsive episode, thank you. You are great people.

Regards
Paul

Hugh also called Bill some not-nice things. (Personally, I agree with what he said, but that's not the point. Newsgroups don't work if people get personal.)

I found the same thing in the unit I tested in Monitoring Times
magazine and mentioned it in the review. For some reason,
they are delivered in an "insane" state.

When you first get a new BC895XLT, you must reset it.

Turn it off. Press and hold 2, 9, and Manual keys
while turning the power on.

Now, you will have to reprogram the channels as they
are zapped during the reset sequence.

Hi,
I am looking for the 4 or 5 Detroit Mich Metro area tv audio freqs.
The audio freqs are the ones that they use when they are on a remote
location doing a story.I am looking for the Fox,WDIV,WXYZ and UPN50
and CHANNEL 62 the CBS FREQS. If you know them,please post or email.
Thanks
Rick in WHite Lake

They are great to have because if you have them programmed and scan
them,you will find out when they are possibly in your neighborhood
doing a story.

One problem: You should realize that not everyone lives in Australia.
Frequencies are much different here.

Here in the "states", public paging services are located from 151 to
152.995 (various services -- popular, used with most local agencies),
454.0 to 454.995 (mainly Alpha and 512-baud stuff, local and metro), and
929.0 to 931.9975 (FLEX & nationwide).

Ok here goes. A regular scanner scans according to the frequencies you program into it. You can scan Low band, high band, or UHF. A trunk tracker is for use with the 800 MHZ systems that many cities are switching over too. Under this system the actual frequency being used changes during each transmission. There is a block of say 10 frequencies that are used by each group (police department for example) Each time a unit transmits it uses the next availble frequency. The trunk tracker follows a units id code instead of its frequency. That way no matter what frequency it uses the id is the same.
The scanner you buy should be based on what you are going to listen too. If your are uses 800 MHZ you should look into a trunk tracker. If they still use VFH a regular scanner will do the job.
Also, most trunk trackers can only do one fleet at a time. Meaning if your local PD and your local FD both use 800mhz systems your will only be able to monitor one a time. Same would go for different precincts in from the same department.

I hope this helped. I know its not that clear, but sometimes its hard to explain these things without being able to show you. Anyway good luck.

John Mackey , you know I posted the truth , the post was not a forge nor was the email from Nick OBFD , where he explains your plan to do Cheek in . Why do you continue with your lies as I have shown proof positive that you are the liar people say you are.

I have shown proof that you are lying, you have not shown any proof that OBFD is lying, why he should he be, after all he really did not like what you were doing by disrupting the scanner group with your constant yammering because you got dumped off a fido net for being a jerk.

You did the same thing on the fido net, Cheek did not see eye to eye with you and you pulled the same nonsense there as you are now doing and he had no choice but to cut your access to the fido net.

That has stuck in your crawl festering because you could not have the last word, so when you saw Cheek on the internet you decided that once and for all you would have the last word and be King John Mackey of scanner group.

But you did not count on a few people knowing the real motive for your temper tantrum on the scanner group.
John Mackey you are acting like a spoiled child that believes he is above all others and can do what he wants, when he wants.
And when caught doing something wrong blames it on others by saying OBFD could be lying.

TC4s66F, yes.... a single LMOS bilateral switch.

> is present on the COM205. I am at
> home right now so have no reference to check but didn't all the 2006's
> that GRE produce for RS have IC-10 although from memory the Service
> Manual does not/did not show it ?

The schematic shows it, but it isn't mentioned in the
IC Identification section. It is in the parts list.

> Altai started to distribute here in Europe several of the GRE produced
> scanners from around 1994/5 onwards. Initially these were the COM202
> (PRO-44), COM203 (PRO-39), COM204 (PRO-43) and COM205 (PRO-2006).
> Perhaps the numbers "205" were not the most appropriate in view of the
> PRO-2005.

No biggie, so long as the IC-10 is present. That's
the most visible difference between the PRO-2006
and the earlier PRO-2005. There are other underlying
and subtle differences in the CPU and PLL; enough
to make the PRO-2006 much the better deal. Thus,
prospective buyers of the PRO-2006 or COM-205
should be aware of the potential for fraud.

Here in the states, I've found PRO-2005's
disguised as PRO-2006's with a change of faceplates
and the rear labels. Inside, they were 2005's,
and it is hard for the non-technie to tell for sure.

> I don't beleive the COM205 is still produced but there are a good number

> sets now seem to be of Chinese origin.

You're kidding! Wow..... Up through the
PRO-2042, GRE units were all made in Japan.
However, their economy being what it is,
probably motivates their own brand of
"maquiladora" now. Bummer.

Rgds,

Bill

FOOL!

Companies lease service & POP's (Point of Presence) all the time.

For example:
Concentric is HQ'd in California but provide service all over.

The POP you list below is in Bellevue regardless of where there uplink
is!

Hi from Ireland,

They are in very short supply here - I am waiting on one from my supplier who has been allocated only 3 up to recentle which he has already sold and is due a few more in 2 weeks or so. Also, I was in London recently and trawled Tottenham Court Road there and found none!! Dealers have been promised a delivery - look up Short Wave Magazine (UK) for dealers addresses such as Javiation, Martin Lynch, Lowe Waters & Stanton etc.

I need to convert a pair of Radio Shack trc-506 , 49Mhz talkies from 49.830 to something else!
Bought them for kids to use while bike riding but all the baby monitors and the like make it impossible to use them. Any tips on changing the freq??
This model (dual conversion) has 3 xtals, 16.610Mhz, 39.130 and 10.245. I have plenty of xtals in the 37, 10 and 16 mhz range.
Any tips?
Thanks All

One suggestion for used radios...Radio Shack always has "managers' specials" at each store.
This is according to their stock of returned or discontinued radios. It may pay to visit a couple of Radio Shack stores in your area.
Otherwise, post the specific type of radio you are looking for in this newsgroup as WTB
(want to buy). Someone may just have it!

I have a PMD 201 recorder. I'm not too sure that I want to let it go but I'll
tell you where I got it from. Call "Martel Electronics" in Anaheim, Calif.
Their
tele used to be: (714) 871-7102 or maybe (800) 553-5536. It's been 7 or 8
years since I bought it from them but they had the best prices back in those
days. They were reliable folks, with a good reputation too.

Good luck and let me know if they are still around..

RS can order you a battery for the PRO-90, which will definitely work in your 235. Or at least a competent salesperson in RS can. BUT ... they'll charge you over $25 for it. You can direct-order it from Uniden for about $10 or so. Visit their website at http://www.uniden.com. They'll send it 2-day or overnight, fairly reasonably.

Message-ID: <35D21D8D.E3019A2C@writeme.com>
Source record: 147941

I was just at Costco in Denver, and they do not have the 6 pack at all, just the 4 pack with charger for $14.59
I wanted the 6 pack so I could use them with my existing charger.
Fro the specs you gave, your existing charger is just fine for the 1100mah nicds, just leave them in for 12-15 hrs for a full charge. Any nicd can be safely charged at 1/10C, which means at a current = 0.1X capacity, which in your case is 110 ma, so the 120ma of your charger is fine.
Now, where can I buy the 6 pack for $9.95!! ;-)

2044. Re: REQ: Uniden Bearcat BC 200 xlt manual (I lost it)

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: midnightt@hotmail.com
Message-ID: <6qt7uu$7fd@newsops.execpc.com>
Source record: 147943

I OCRed the important parts of my manual.

Operation

The BC 200XLT has 200 memory each of which can be programmed to store one frequency. The channels are divided into 10 - 20 channel banks, useful for storing similar frequencies in order to maintain faster scanning cycles. When scan is pressed, each of the programmed frequencies within a selected bank will be sampled for a transmission (locked channels will be skipped) at the rate of about 15 channels per second. If an active frequency is found the unit will stop and monitor that frequency until there is no longer any activity. A two second delay can be added to each channel and will allow the unit to monitor the frequency for a return or continued transmission. If, after two seconds, the frequency remains inactive, the scanning cycle will resume.

When the unit is first turned on, each channel will contain "000.000". When new frequencies are programmed, the old will be erased. If an invalid frequency is entered, "Error" will be displayed and the old frequency will return.

To operate the scanner make sure that the batteries are charged or power is correctly connected to the unit. Turn the volume control on and adjust the desired level. Adjust the squelch by turning the knob fully clockwise until a rushing sound is heard. Turn the knob back until the receiver is silent After the channels have boon programmed, operation is simple. Press the scan key to scan all the channels While the receiver is scanning channels pressing one of the number keys will turn a bank of 20 channels on or off. The black lines at the top of the LCD display show you which banks are selected. If a bank is already selected (shown by a black line under the bank number) pressing the corresponding button will deselect that bank Press the manual key to stop scanning. Repeatedly pressing the manual key will step through the channels in order. -

LCD Display

The BC 200XLT has a backlit display which shows the current channel and frequency as well as other operational modes. When the unit is scanning, the channel number will rapidly advance while the frequency display will go blank. When the scanner is stopped the current channel and fre-quency will again be displayed. When frequencies are programmed the display will show the digits as they are entered. The display win also shred "PRI" when the priority mode is on, "L/O" when-ever a channel appears that has been locked out, and "DLY"

whenever a channel has been pro-grammed for delay. Across the top of the display a series of dashes under the numbers 1-10 will be present. These are the bank indicator numbers. These are selected or deselected during the scan sequence by the use of the numeric pad.

Programming

To program a frequency into a channel, press the digits of that frequency including the decimal point and then, press the enter key. If an invalid fre-quency is entered, the display will show "Error". To change a frequency enter the new one and the old one will be erased.

To program 162.550 into channel 2: Press 2MAN Press 162.550E

To program 471.2375 into channel 7: Press 7MAN Press 471.2375E

Multiple Entries - When you press the E" key to enter the same frequency in a different channel the LCD will show the channel number of the current frequency "Ch 45". If you want to repeat that frequency in the new channel press the "E" key again. That frequency will now be programmed in both channels. You can repeat a frequency as many times as desired.

Features

The following b a brief description of the opera-tional features of the BC 200XLT.

Manual Channel Selection - To manually select a channel press the manual key repeatedly until the desired channel Rumba appears in the display. If you have deselected any of the banks h will be impossible to access any of those chancels manually until you have selected the particular bank in which your channel exists. Press and hold the manual key to rapidly step through the channels.

or

Press the channel number you wish to access, then press the manual key. The scanner will automatically advance to the desired channel regardless of the bank status.

Lockout - Select the channel to be skipped. Press the lockout key. The lockout indicator win appear in the display whenever that chanted also appears. To take lockout off press the lockout key on that channel. Note: If priority is selected, channel 1 will not be able to be locked out. All other priority chanced may be locked out.

Priority - When it is important to keep track of the activity on one frequency white listening to others, the priority function should be used. Program the important frequency into the first chanted of any bank. Press the priority key to activate the priority function. Every 2 seconds the unit will check the first channel of all selected banks for activity (the priority indicator will appear in the display). If a transmission is found the unit will monitor that channel. If no signal

is found, the unit will return to the previous channel and function. Press the priority key again to turn off the priority function.

Search - Use the search mode to look for new active frequencies within the bands of your scanner.

Enter the lower limit frequency on the keypad and press the limit key;

Enter the higher limit frequency and press the limit key again;

These two frequencies set the range that the Unit will search. Press the search key to start searching. If an active frequency is found the scanner stop to monitor the signal. Press the hold key to hold the search on the frequency. Press the hold key again to step up to the next frequency or press the limit key to step down to the previous frequency. If you press and hold down either the Hold or Limit keys, you will rapidly step through the search fre-quencies. (Step up with the Hold key, and step down with the Limit key.) When the signal stops or if you press the search key, the unit will continue search-ing. Press the manual key to leave the search mode.

Low Battery Indicator The BC 200XLT has a low battery indicator to let you know when your battery needs to be re-charged. When the BATT indicator on the LCD display starts to blink, it means that the battery pack needs to be charged. After the low battery in-dicator has been blinking for about ten minutes, the scanner will shut itself off to prevent the batteries from becoming completely discharged. See the section of this manual on Battery Maintenance for more information.

I'm going to dredge up my recollection and differ slightly. I know
Delta does, and can't speak as to American or Northwest; but TWA doesn't.
I've heard many a FA announce that cell phones and receivers of any kind
are forbidden at any time.

2052. SCAN ARIZONA! New Audio Site

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: Scott Sykes <kf4ndq@qsl.net>
Message-ID: <35D26F9E.1C0BAC17@qsl.net>
Source record: 147951

This site for for those who want to know more about
Scanning Arizona. Located in southeastern Arizona,
Pima County
is the home of Arizona's' second largest population
area, Tucson.
Over 800,000 people live in the county. The close
proximity to the
Border of Mexico allows you to hear some interesting
intercepts.

Recent Listener History

This information is uploaded on an irregular
basis. We hope
to find a way to automate the process so you can see
who is
listening and where they are from. This is log
information output
by Radio Destiny Server.

Pro 2006 - OS456 - Scan*Star 6.43

The Scanner is a Radio Shack PRO2006. The
computer
interface is Optoelectronics OS456. The software that
keeps the
scanner following the action is Scan*Star. Soon the
G/Wiz
board will help Scan*Star follow the Pima County
Sheriffs
Office a bit better.

Radio Destiny Broadcast Software & DSL

Radio Destiny is a new software program that
allows people
like you and me to broadcast from a basic computer with
a basic
connection. This site is served by US WEST DSL service
that is a
full-time point to point connection to the net at a
minimum speed
of 256K upload and download, sometimes much greater.
This will
allow many connections at one time depending on
connection

speed and CPU speed. Right now this is all running on an AMD
K6-2 300 mhz (3D Now) w 64meg of ram.

This is just the beginning...

Much integration is planned to the scanner and hopefully
soon dynamic information can be generated. Check this site often
and let us know what you think about it as it progresses.

So what?

We were speaking in the past tense about things that happened months
ago so words like "was", "were", & "had" would be common.

They are a relative measure. In this case, it is hundreds of miles!

> Fidonet".
>
John Mackey , you know that I am not Cheek and your just trying to validate yourself on here by saying that .

What bothers you is that someone has proof of your lies about Cheek and you cannot have that . So what do you do, start claiming they are Cheek, you claimed Phil is Cheek, you claim that I am Cheek, the next time around it will be claiming your mom or dad is Cheek.

> > I hate to burst your bubble but several thousand other people have
> > commpuserve as a service provider.
>

The point he was trying to make is that many service providers use compuserve for their news provider and you cannot understand that concept.
>
> > Again proof that you are the one who made up the warrant story in a
> > feeble attempt at black mailing Bill and forcing him off of the

I have shown all of the proof that was necessary to show everyone on here that your a liar when you stated there was a warrant for Cheek and then you tried to use that against Cheek.

John Mackey you have yet to show any proof that my statements are not true, the reason being is you cannot because they are true , you know that as well as the good people on here know that.

It takes someone with a sick mind to make up a story like you have and then post it on here.

I know your a liar, you know your a liar and everyone else on here knows your a liar.

2072. New LAPD Comm System "Digital"?

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: Ken <Kencaz@att.net>
Message-ID: <35D140AC.5B4D3360@att.net>
Source record: 147985

I found this article and was wondering since these are digital systems
how will they impact analog scanners, and would we still be able to
monitor the LAPD...

THE Los Angeles City Council approved a $50.8 million, six-year contract
with Motorola's Land Mobile Products Sector on
March 3 for an advanced, UHF digital, ASTROï¿½ radio communications system
for the police department.

The new radio communications system is part of the overall LAPD plan to
upgrade its emergency communications system.
Motorola will install a new communications infrastructure so officers in
all parts of the city can use their portable radios to
communicate directly with each other and the dispatch center.

"The new radio system will provide the citizens of Los Angeles with
enormous public safety benefits," LAPD Police Chief
Bernard C. Parks said. "It is a major priority of this department to
enhance the communications capabilities of the LAPD to
strengthen our ability to protect our communities. Police officers will
have the ability to communicate across the street or across
town, greatly enhancing our day-to-day communications efforts and
strengthening our communications capabilities during
emergencies."

The master radio system will interface with the emergency command,
control and communications system (ECCCS) and the
newly planned 9-1-1 dispatch centers. The system will be a UHF,
57-channel, digital wide-area simulcast system specifically
engineered for Los Angeles' varied terrain.

There will be five simulcast subsystems that will use 24 sites
throughout the city to support more than 9,500 ASTRO SABER
IIIIï¿½ portable radios used by LAPD officers. The portables are dual mode
(analog and digital). When the system is in place,
the radios will work in the digital mode.

The portables were designed by Motorola to accommodate future technology
and feature enhancement through software
downloads.

In November 1996, the city finalized an $8.3 million contract with
Motorola to begin the civil-site development part of the
contract, which includes construction of tower sites and buildings
critical to the installation of the ECCCS or master radio

system.

The installation of the communications infrastructure will begin in conjunction with the civil contract work already under way. The design, development and installation of this complex system will take about three and a half years, Motorola said.

Motorola also will install a $20 million state-of-the-art data communications system designed to provide the LAPD with expanded data capabilities, support today's dispatch and informational data requirements and many new data applications. The system, Private DataTACï¿½, will offer a high level of data capacity to support future multiple data terminal devices and connectivity to national, state and local crime information computers and records management systems.

With the installation of the new voice radio system, Los Angeles will join the growing number of public safety organizations to install systems based on Project 25 digital radio standards.

The Los Angeles radio system will meet the Project 25 conventional radio systems standard. This will ensure that a compliant Project 25 radio will be able to "communicate" with another one, regardless of the manufacturer.

mackey the question sheould be is when were you appointed to speak for
obfd ?
What data do yo have to support any of your statements?

I remember when I sent an email to you and obfd would reply, I would
send one to obfd and you would reply.
Always thought something was wrong there and that you were one the same
person.

Mr. Dogs,

I've had an M-450 for about a year already, and it is working excellent. I have decoded a number of different POCSAG modes here in my home city (approx. 650,000 people), as well as ACARS, CTCSS and DTMF. No luck on RTT as yet, but I think that may have more to do with the limitations of my Sony ICF-2010 than anything else. Most POCSAG signals are recieved using "POCSAG" in the "Normal" mode. Lots of text messages, with the occasional numeric page. I have tried hooking the M-450 to my P-100 through the parallel port, but no luck as yet. . .

toreek@aol.com (Toreek)
> Why can't people use radios and scanners on flights all the time? Some
> airlines allow it, some don't. What's the deal, do they cause some terrible
> interference or something?

The Federal Aviation Regulations (FARs) specify that all portable
electronic devices (PEDs) are banned from airliners, with certain exceptions.
In particular, if an airline deems a device safe, they may allow it. Absent
a specific authorization, the device is not allowed. The FAA has set the
ground rules and given the airlines responsibility for exceptions.
Most carriers have taken the easy way out and only authorized the bare
minimum, i.e. heart pacemakers, electronic watches, etc. A notable exception
is the laptop computer. While these might radiate more than a receiver,
no airline is going to risk losing the business traveller.
For a copy of the actual FAR 91.21 and the official position of a number
of airlines (a bit dated, but probably still accurate), download

ftp://oak.oakland.edu /pub/hamradio/docs/misc/ scan.airline
-or- CompuServe HamNet Forum Lib 2 AIRLNE.TXT

Rich Wells' "New Scanner Users FAQ" was an good plain language description
of FAR 91.21 and its implications.

As to the actual risks, ASRS (the NASA Aviation Safety Reporting System)
has received a significant number of incident reports from pilots and
controllers. You might want to read the May 1994 issue of "Callback", the
monthly safety bulletin from ASRS, for some very specific descriptions of
inflight incidents with PED interference.

kplotkin@access4.digex.net (Ken Plotkin) wrote:
> Policies vary among airlines, and among individual Captains.

Far 91.21 gives the operator, i.e. the airline, the authority to allow
PEDs. The captain may impose additional limits depending on conditions, but
he may not relax his company's policy. General aviation pilots can risk their
own planes as they wish.

Ryan Faricy KC0DSZ <jtonsa@nospam.att.net> wrote:
> I'll tell you, using a scanner on aircraft is great because you are sitting
> inside one big antenna! <grin>

Actually, it's more like sitting inside a Faraday cage. Unless you plaster
your antenna right up to the window, you'll receive very little. Working
420-450 MHz, I got good results with a 16-foot wide box beam array hung below
the fuselage, but I doubt your airline would go along with that <g>.

UHF Handies work much better inside aircraft than do VHF.

Make sure you get a window seat and be discrete! 8-)

Some pilots are quite decent and one even allowed on of the hams I know
to have a few QSOs from the HF rig in the cockpit!

Cheers!
Andy

Whoops! Sorry about that. I was only quickly looking at my manual and was typing the wrong stuff, evidently.

2092. Batteries for BC235

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: Jason Low <lowj@cadvision.com>
Message-ID: <35D19C29.F9D0033E@cadvision.com>
Source record: 148005

I've managed to utterly destroy one of my BC235 batteries through carelessness, and the second one is well on its way to oblivion as well. Going on the assumption that since the Pro-90 is basically a BC235 in RS's clothing, I walked into a store and asked if they had any batteries for the Pro-90.

"Um.. no."

I explained what I was looking for.

"No.. we don't carry those."

But you have the scanner right there, I prodded.

They wouldn't open the back of the radio to humor me. They instead insisted on taking me to the wall of batteries in blister-packs and seeing if we could find it there. Naturally, no go..

Another RS outlet told me flat-out that RS doesn't stock those batteries, but they could custom-build me one..

WTF is going on here? Does the Pro-90 really *not* take the same battery pack as the BC235?

Anyone got any idea where (major chain that might have a few stores in Western Canada) I might get a couple of spare batteries for my 235?

RS's slogan should be "you've got questions, we've got answers--although most of the time it's usually 'no' or 'uhhhm'.."

(On one of the same trips: me: "Do you have any glassmount scanner antennas?" mgr: "No. I don't even think they make those." "Sure they do, they look like cell antennas in appearance but they're designed for scanners." "Well they must not be a Radio Shack item then." "Well then, how come it's in the damn catalog?" <point to cat number> "Oh. Well, it doesn't have a picture of it there." (AAARGH! SO WHAT?!))

2093. HELP: 800 mhz receive problem BC895

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: Chris <n8cop@tir.com>
Message-ID: <01bdc5f9$e40b0d20$db54dacd@hp-customer>
Source record: 148006

Thanks for reading this and hope someone has a solution. I recently put an all-band (25-1300mhz) Diamond discone up on my roof, to maximize the receive capability of my Bearcat 895 Trunktracker scanner. The antenna was assembled to specifications and I used a 30 foot run of low-loss coax (braided 9913). Here is my problem...since placing my 895 on the outside antenna, it is now DEAF in the 851-869 mhz region !!.
All other bands (low through uhf and the business portion of 900 mhz) show much improved receive. A nearby local government station, at 851.2125 mhz, comes in full scale, but sounds like an image frequency (hiss on the signal...doesn't sound natural). When I put the 895 back on the indoor antenna...all is well with 800 mhz.

Anybody with a similar experience or suggestions, please send them my way.

Thanks,

Chris M.

You might want to visit the following site. I bought my BC235XLT from them and remember seeing spare battery packs among the 235 accessories, $14.95 I believe.

Good Luck

> I bought mine at Costco/Price Club

Costco/Price Club also has a package of 4 with a charger for $15 or the 6 pack (no charger) for $10.

I've been buying the 6 pack and using an old ni cad charger I had to charge them up. Charger specs are: Again & Again (brand) Model cc-8. Input 8w. Output dc 1.2v/2.4v/9v 120 mA/120mA/10mA.

My question-Is my old charger giving these batteries the maximum charge and life? Should I buy a new charger or buy more batteries? Am I splitting hairs (or micro amps)?

Source record: 148011

One guess (although, it may not help much) is that a nearby 800MHz signal is overloading the front end and causing it to reduce its sensitivity in that band. I don't know if the 895 receiver will do that of not, but I know many scanners have this "feature". One way to test this theory would be with an attenuator.

My only other guess would be some weird RF effect like a short or something that is creating a 'stub' effect and filtering the 800MHz range (although I think it is unlikely since a stub would not cause so much attenuation).

A better antenna would help. however do go spending a lot of money on one. Most handheld scanners are quite sensitive and a big rooftop antenna often just makes signals over load. An amplifier can only amplify a weak signal to make it a bit stronger. It can't "pull in" more signals. I would start with a better handheld antenna - a better duck type antenna, or a telescoping type. If you live out in the boonies, a rooftop antenna, like a discone, would probably work great (since there are not a lot of strong signals to overload your scanner).

Thanks for the input - if you read my post, I said I read the manual
and that I found this comment applied to searching, not scanning.
Perhaps I missed the part about it applying to scanning, I'll have to
go back and check.

But the bigger question was, is that the way the scanner is supposed
to work? I.E., when I program in a frequency, is it supposed to, by
default, display the crossed-out DATA ONLY when scanning and not when
I manually step through?

>>Ok, I reset the scanner and reprogrammed in about 40 freq's (all
>>none-trunked). It scans much faster now. But now, whenever the
>>scanner stops while scanning, the word DATA with a diagonal line
>>through it appears (but not when I hit Manual and step through the
>>frequencies). I found something in the manual about how you can push
>>the DATA button while searching if the scanner is stopping on freq's
>>containing data and you don't want it to do that. But I didn't see
>>anything about the crossed-out DATA appearing during normal scanning.
>>Anyone?

2102. New NASA hurricane study - freqs?

Newsgroup: rec.radio.scanner
Date: 1998-08-12 00:00:00 UTC
From: D Stark <nf2g@ggw.org>
Message-ID: <6qshbneqo1@node17.cwnet.frontiernet.net>
Source record: 148015

From a NASA press release:

When a hurricane or tropical storm erupts in the Atlantic, a NASA Dryden Flight Research Center DC-8 -- equipped with instruments to measure the storm's structure, environment and changes in intensity and tracking -- will fly into the storm at 35,000-40,000 feet.

At the same time, a specially equipped Dryden ER-2 -- a high-altitude research plane -- will soar above the storm at 65,000 feet. The high-flying plane will measure the storm's structure and the surrounding atmosphere that steers the storm's movement.

Anybody have frequencies for this operation?

Hi,

I have an ICOM R-7100 communications receiver
for sale. Covers 25-2000MHz continuous. It is modified
to provide a buffered discriminator out. Good condition
and non-smoking owner. Looking for $875 negotiable.
E-mail me if interested. May throw in a pre-amp (JIM-75).

Daniel

The Iridium mobile phone service will be digital, so an analog scanner
will not pick anything up anyway.

Chris,

If you're anywhere near a cell site, especially if they've gone digital, your BC895 is probably drowning in overload/desense/intermod/etc. A filter would be your best solution but can't think of any inexpensive ones at the moment. An attenuator from Radio Shack might help but it will of course reduced your desired signal also. Good luck.

Source record: 147844
Cross-posted to: rec.radio.amateur.swap,rec.radio.swap,rec.radio.shortwave,rec.radio.scanner

For Sale: ICOM R71A shortwave receiver. Excellent condition, some scratches on top. Just gone through by ICOM dealer. Though it is no longer in production this is still the benchmark that they compare others to. For those unfamiliar with this radio it resembles an Amateur Radio HF transceiver - so it is a ï¿½base' rather than a portable (though it will run mobile). It has coverage from 100 Khz shrough 30 Mhz, has AM/FM/USB/LSB/CW/RTTY, noise blanker, AGC, memory scan,multiple filters,attenuator, dual VFO memory, etc. Dealers sell this radio used for $600 to $700.

Asking $450 firm, payment by postal money order. I pay your choice of USPS or UPS shipping. Sorry, so sales outside US contiguous 48. No trades. If interested please respond by Email.

I'm trying to find the frequency for Clevland State University Police.
If anyone knows what this is please let me know. Thank you.

2171. Pro-2004 sensitivity question

Newsgroup: rec.radio.scanner
Date: 1998-08-13 00:00:00 UTC
From: mtbikerno@spamnojps.net
Message-ID: <35d3e3a7.3141505@news.jps.net>
Source record: 147846
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just got a Pro-2004 a week ago, and in comparing it with my Pro-2006 on 800 MHz (870-893.970 MHz) I noticed that the 2004's sensitivity wasn't as good as the 2006's. I went to the Radio Shack webpage and checked the specs on the 2004, but the sensitivity specs are listed in millivolts instead of microvolts. Is this a typo? I did get lucky in other ways on this unit; the display is still in good shape and it doesn't have any signs of being one of those units that was made with the defective wave-soldering machine, even though the date code is 6A7 (June 1987). When I got it it had the cell mod and 400-channel mod. I did the speedup mod and the keypad beep delete mod, and I also removed a TNC connector that someone had wired directly to the existing BNC connector with a short length of RG-58 under the top circuit board. This improved reception a lot, but I am still curious if the sensitivity is supposed to be as good as the 2006. If anyone knows, please post a response to this newsgroup. Thanks in advance.

Someone posted a FCC beta site here a few months ago. You could look up by frequency or callsign from a form on their page. I went to the FCC web page the other day and could not find it. I lost the bookmark with the URL during a change from 60 MHz Power Mac with Netscape to 333 MHz P2 with Explorer. Anyone have it? Please E-mail me if you have time. Thanks, BiLL

Why not from Radio Shack? They are the same radios that Alinco and another company make. RS just puts their name on it.

Alinco makes the model with which the antenna flips up from the back.

to change freq, the required xtals are:

tx xtal = tx freq / 3

rx xtal = rx freq - 10.7

yours are on 49.83 MHz. If you stray too far from this some retuning
will be required. Check old cordless phones for xtals if your a
'scavanger'.

Captain Bob wrote in message ...
I am new to this group and unaware of computer/scanner hook-ups.I
have a BC890XLT, and 2 BC895XLT's...Can I hook these up to my
computer, and what will this do ? If you can help, please let
me know...

The 895s can be connected to the computer to either scan with your computer or program frequencies. You can program more banks than the scanner holds and change them around (by copying over). I created my own cable for less than $2 worth of supplies and downloaded "PC 895" to control it. Surprisingly, everything worked properly. This weekend, I'm planning on going down to the Santa Cruz area and will program a few banks for frequencies down there, but I have no need for them here. I'll just program the frequencies on top of what I currently have for the trip and when I get back, I'll copy the banks back the way it was. You could also clone your 2 895s if you wanted to.

The popular VHF Alpha frequency is 152.24; however, you will still hear some voice pages from time to time.

If you're using RG58, there's your problem. I recommend RG-11 or RG-8 for the best RF shielding.

John Mackey once again tries to pass off a forged email supposedly forwarded by Nick OBFD as the truth.

I sent email to The CB Guy and he has stated , he has never had a hotmail account, and never sent the email letter John Mackey claims he did.

The proof is below in the email I received from The CB Guy.
One can only wonder why John Mackey would want to pass the blame on to someone else once more, first it was Nick OBFD who started the story , now he wants to put the blame on The CB Guy .

Yes, we have one freq here in MN with about 50% alpha, 40% numeric, and the remaining pages are voice.

A friend of mine has a Regency TS-2 scanner.
Uniden either will not or can not repair it
and returned it to him. The scanner will just
stop scanning after a while. The display
hangs up but it will not scan and otherwise
just sits there. If it is turned off for
a while then turned back on it will resume
scanning. The time varies before it quits again.
Does anyone know if there is an alternative
to Undien.

Does anyone wonder why I am acting like a jerk sometimes?

I suppose the story should be told. Within the past few months, my dad's MS (multiple sclerosis) has gotten much worse, and he is now thinking he should end his life because he doesn't want to burden family members with his care. This "action" was to be done by Kevorkian, but that group has now decided not to participate in euthanasia (assisted suicide) for legal reasons.

This decision to end his life has changed many times, and has left me very frustrated. He has now decided to do it himself, which really gets me irritated, frustrated, and leaves me in wonderment. It would have been "better" if he chose to have someone else do it, but to kill yourself by yourself, that's a different story.

Anyway, please have sympathy for me, as I am not mentally cheerful, and I probably won't be for some time. I cannot write much more, as I don't want to even think about this possible action my dad may take.

I realize this is off-topic in many ways, however I needed to get this out to others, and I apologize for past, present, and future bad behavior now.

*** For those who continue to pester, flame, vex, or otherwise harass me, just leave me alone. I am sick of the flames, and flames are things I don't need at all right now. Those flamers include Jack (and especially him), Hidden and Gone, among a few others.

2214. BC895 Computer Programs A review.

Newsgroup: rec.radio.scanner
Date: 1998-08-13 00:00:00 UTC
From: Jason Webb <orlscan@bellsouth.net>
Message-ID: <IHJA1.107$Je.369785@news2.mco.bellsouth.net>
Source record: 147889
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello Fellow TrunkTrackers,

I have been evaluating the available software and here are my conclusions.

#1 to Buy is Scancat-Gold SE, It Works really well with the 895

It has a newly designed interface that looks really great.

It was the Best $99.00 I have ever spent and makes programming the radio a Breeze.

you can also get the Cable (Nicely done, and well constructed) from scancat.

Also if you are good at soldering you can "Roll your own" with parts from Radio Shack.

You can Reach Scancat(Computer Aided Technologies) at
1-888-Scancat
or http://www.scancat.com/

Also don't forget the great tech support that Comes with Scancat

In the time that I have owned scancat with my AR8000 and BC895 I have nothing but good experiances with C.A.T.

Here are My Other observations.

Pc895 is free but the new release seems buggy and crashes, I really would reccomend it but it gave me all kind of errors when i started it up (On 2 different Machines) When it quits crashing I will Most Wholeheatedly Reccomend it.
Free program so can't complain much. if it worked.

Freetracker is Very Good and it is free - The Creator is really doing a good Job, with no more crashing,and a friendlier database he is making progress,,,Reccomended for a good free program

Radio Manager is ok also and costs around $40.00, Does not crash, however I feel the Interface could use a little pep-up, very nice Database

Scanstar is Buggy and Crashes - Trunk Commander (scanstars trunking module) Crashed on me and locked up the computer. Plus it is the only program that rewrites your Autoexec.bat file (a scary thought) I do like the look but it was confusing when i could get the demo to work. (one time for 2 minutes)

Just My Opinion,

Jason Webb

Hi All,
I am looking for a reliable service repair shop to repair
an old Crystal Control Scanner.

It is a SBE Scanner that in the same box as a SBE CB Radio.
It is a SBE Super Console Model SBE-14CB. The scanner will
scan, but don't receive, it has noise if you open the squelch but
no signal. I do have the Sams CB photofact #CB-51, January
1974 that has board layout and schematic and alignment.

Any help will be appreciated. reply to: boyd@humboldt1.com

Thanks, Boyd

I don't own any of these walkie talkies, nor have I acually seen the inside of one, but this is info that I read in a magazine article. Since I haven't done this myself, don't blame me if you flunk up your radio.
In order to make these walkie talkies cheap, the manufacturers used the little chips used in cordless phones. These chips controll the old ten channel cordless plan for the 49.xx freqs only. A separate chip controlled the 46.xx freqs.
The chips have four inputs that are set in a binary plan. 1-10 set the standard ten freqs, if 11-16 are used, the chip defaults to channel 10.
On the 5 channel 49mhz walkie talkie, the freqs are 49.83, 49.845, 49.86, 49.875, 49.89. These freqs are set via a diode matrix. Just change the diodes and you'll get freqs 49.67, 49.77, 49.93, 49.97, 49.99. These aren't used by the baby monitors, or by anything alse but other cordless phones, so you'll have notably less interferance.
For the fixed one channel talkies, I imagine that the freq is set by the pins permanantly soldered high or low. So, it'll be more work to change the freqs. But just some wire snips and a piece of wire or two will do the job.
I hafta say this, it's the law: Remember, these radios aren't certified to use freqs that they don't allready use from the store. Changing the freqs violates FCC certification and they'll be illegal to operate ever again.
With that out of the way, I'd like to hear if this really works. Someone e-mail me or post to the groups if you've done this.

Has internic assigned your group the domain name of "P_ARG.ORG"
or are you lying when you use that domain name?

When I use the e-mail address of "bbowers@parg.org" I am using a
e-mail address assigned to me by the "PARG.ORG" domain authorities
under the approval of internic!

I'm making a trip for the weekend to Santa Cruz County and was curious if anyone had the CTCSS tones used by different public safety agencies in that county. I have found lists on the Internet for various frequencies, but none include the tones. If anyone knows tones I can program in, let me know. Thanks.

2238. Disneyland Trunk System

Newsgroup: rec.radio.scanner
Date: 1998-08-13 00:00:00 UTC
From: Richard Sauer <rrcom@pacbell.net>
Message-ID: <35D3DB52.5FD9@pacbell.net>
Source record: 147913

I acquired a nice little Motorola Visar. The person who gave
it to me *thought* it was an 800 MHz conventional radio. Neat!
I planned to program LA City Fire into it, until I figured out
it was a 900 MHz trunking radio. DA-OH!

Has anyone decoded the talk groups for the 900 MHz trunk system
used at Disneyland in Anaheim, CA? That's the only thing I
know of on 900 MHz that MIGHT be interesting to listen to...

Anything else in SoCal that anyone has info on out there that's
900 MHz Motorola Type II/IIi trunked?

Any help would be appreciated.

Rich.

In my BC235XLT manual, it indicates a feature "direct channel access".
It's not listed anywhere else in the manual...do they mean channel banks,
or is there a way to go directly to Channel 92, say, w/o having to stop
and "scroll" through them all.

TIA,
Tim

Here ya go, son! e-mail from the CB GUY to OBFD that he (OBFD)
forwarded to me. Bill knew about this a head of time too as OBFD sent
him a warning about the issue giving him a chance to change his his
ways.
Of course, Bill declined!

CB GUY was the first to bring up the accusation of BIll Cheek
as a child molester!

I just found this out about Bill Cheek, and just think I have been
defending him for so long.

INDECENT EXPOSURE
Bill Cheek has contacted five different
eleven year old boys and
exposed his penis to them. He has attempted
to get the boys
into his car. Cheek has also masturbated in
front of the boys.
OR. AG.: SDPD/Mid City; Warrant: M728645CA,

OK,,,, lets try it ONE MORE TIME!

Those people who carry on with Cheek making trouble have certainly shown themselves lately as being the trouble makers they are.

So lets let all this flaming STOP & return this NG to the good of the order to benefit all.

If everyone simply stops the flames & off-topic posts, all will be well!

Try it, it's simple!

Have you tried the FCC's web site for data? www.fcc.gov? They're putting all of their databases in one basket.

John Mackey here is proof you lied about knowing whether or not there was a warrant out for Cheek's arrest.

As the email from Nick OBFD below shows you made up the whole thing and then wanted others to lie and say it was true. The proof of it is below you can say it's forged all you want but it is not and you know it is not.

3COM Impact ISDN modem that I bought new so it has everything

Kodak portable PhotoCD player with all the extras-looks like Discman on steroids and plays audio CD'S too.

Yaesu FT 209 and 709 older HT's that look tired but work good. 10 memeory channels

Bernoulli Transportable 150's (3 of them) with 11 disks LOADED with XXX-entire contents of defunct BBS

Let me know what you have.!

I have owned a Pro 2004 and 2006 for years. The 2004 is not as sensitive as my 2006. My first scanner was a 2021 and when I bought the 2004 it missed many signals the 2021 received clearly. The squelch action isn't as good on the 2004 as my other scanners either, is easy to miss signals when scanning if they are weak. The alignment of the 2004 was checked once several years ago and very little improvement was made.

>I just got a new sony scanner as a gift. Is it worth keeping?

Well, tim. I really hate to tell you this, but as much as I love Sony, (i have a sony computer, TV, stereo...) Its a bit too user friendly and government controlled. I'd rather go for raw power without a fancy case and some way of easy access. If you need one that is user friendly, yet not to the point of smarmyness, get a Uniden Bearcat. I can highly reccomend these scanners. Get the new one with 300 channels, turbo scan, and Trunk Tracking.

>And are
>there any good mods available?

Well, Tim. Ive actually never heard of a mod for sony's scanners. Sorry. I'd return it if I were you.

Radio Shack has a special order system called "Radio Shack Unlimited"
where they can order items they normally don't stock. I was looking
through the "Unlimited" catalog (only available in the store) and they
have a listing of many of their old (and I mean old) scanners and list
all the crystals for them. Very nice service on Radio Shack's part.

> Anyone know of a soloution like Etrunk that uses a single scanner (in my
> case AR8000) or if Etrunk can be used in single scanner mode?

I would doubt such a system would be available anytime soon. I had tried using one scanner with ETRUNK, just to see how it would work, but not successful. ETRUNK would monitor the control coming from the BC895XLT, then when it switches to the audio it lost the data. Unfortuently you need that control channel to tell the scanner to switch back. So unless you can detect the end of transmission and switch back to control, it is not possible. It would most likely take a radio with a dual receiver to do such a task just like the Trunk Trackers and other commercial radios.

Stop by the airport, pretty cool. There are probably some more Military frequencies to dig up though, saw alot of C-5A activity.

That should give you a very decent start. Most Hotels, Resturants, Etc, use radios in one way or another. Bring a list of business itinerant frequencies with "dot" colors, it will help out alot. Planet Hollywood uses Motorola radios on the "Silver Star" frequency, and Sandcastle South used "Green Dot". If you don't have a list of this, it can be found on my web site . . . .

All the lifeguards had radios . . . not sure if on the trunked system though, looked more like VHF antennas, don't know the frequency, maybe a business itinerant . . . .

Have some fun . . . . .

Jeff

2271. Last chance?

Newsgroup: rec.radio.scanner
Date: 1998-08-14 00:00:00 UTC
From: Ryan Faricy KC0DSZ <jtonsa@nospam.att.net>
Message-ID: <35D49494.E9FECF44@nospam.att.net>
Source record: 147734
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I hope this is the last time I need to post this, but I apologize (I know I've said this a lot, but give me my 7832nd chance <grin>), and no hard feelings are conveyed to anyone, as long as everyone "plays nice" (Mackey excluded). I hope everyone else feels the same way.

I would like to contribute to the clean-up of this group. Mackey and I have had a truce (we just don't say anything to each other, really), but I think it would be in the best interest of everyone -- excepting Mackey -- to get him out of here. These newsgroups are turning into his "playpens", as it were.

Every time I apologize, I just go back on it with time. The situation with my dad doesn't help, but as someone else put it, I should not take my frustration out on others. I shall calm down a bit and READ before I hit that "Send" button.

No hard feelings, and does anyone/everyone forgive me?

Ryan Faricy

It may have been created with Excel 97 (ver 8.0). Do you have the converter?

John,
don't bother. You tried this before about 71 days ago in fact. It didn't work then and it won't work now. better check your service, I think you will be heading elsewhere again, and soon.

The baclights for teh display on my scanner burnt out. I opened the scanner to check the bulbs, but I can' tell what size (voltage) they are. There is nothing in the owners manual about them either. Does anyone know what type of bulb I need to replace them. Any hel pwould be greatly appreciated. TIA

Hello all, name is Pat. I am looking for either Original
or Xerox of the Instruction Manual and Assembly Manual
prints of the Knight Kit Star Roamer. I you have the
paperwork for the radio please drop me a line. I will be
happy to cover reproduction costs etc. Thanks Pat S

Since you didn't say what frequencies you want to convert I'll assume that
you mean it is for 800 Mhz. Every 800 MHz converter I have seen receives
800 MHz signals and cuts the frequency down by 400MHz and then feeds it into
your scanner. So you would turn on the converter and search or scan the 430
to 512 Mhz band. A signal on 862.2375 would get picked up on your scanner
as 462.2375 - just add 400 MHz to what ever your scanner picks up to figure
out what the signal really is (512 MHz would be 912 MHz). If you are going
to build one, I'd suggest you start with a kit, or at least a PC board. At
800MHz, small soldering or component errors can detune the whole converter.
My guess is that it would all be surface mount components, which take a
little more skill to solder.

Tim-
Even though I don't have a Sony scanner or even had time to
look at one, they have received a "thumbs up" from several ppl that I
know that have reviewed these scanners, namely Rich Wells.
http://www.strongsignals.net/htm/icf-sc1.htm
t sounds like it is an excellent scanner, especially for a
company just getting back into production of scanners again. The first
model was a solid unit and the company isn't having to kick out a "new
and improved" model to correct their many mistakes.
As for the mods go, any scanner can have mods performed on it.
It might not be exactly the mods that you are looking for such as cell
mods, but try to find cell mods on any of the more recent scanner.
Other mods abound...it just takes a person that knows the basics of
mods that were performed on many other scanners and it helps to have
the service manual. Sony usually has pretty good service manuals. The
mods just are not going to be the clip a diode and get cell though.
